Description of the share classes**Class A:**

distribution shares offered to the public.

Class A USD

distribution shares which differ from shares of class **A** due to the fact that they are denominated in United States dollars.

Class A EUR HEDGED:

distribution shares which differ from class **A** shares in that the exchange risk against the euro is hedged. The Manager must take measures to systematically hedge the exchange risk in relation to the sub-fund's reference currency within a tolerance threshold defined in the information on the sub-fund.

Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the information on the sub-fund.

Class V:

distribution shares which differ from class **A** shares due to the fact that (i) at the discretion of the management company they may be offered to distributors and platforms in the United Kingdom, Switzerland and European Union Member States, excluding Banque Degroof Petercam Belgium and Banque Degroof Petercam Luxembourg, (ii) they may be offered by distributors and platforms that have entered into separate remuneration agreements with their customers that are not subject to any rebate, and (iii) they are not subject to a rebate on management fees.

Class V EUR HEDGED:

distribution shares which differ from Class **V** shares due to the fact that the exchange risk against the euro is hedged. The manager must take measures to systematically hedge the exchange risk in relation to the sub-fund's reference currency within a tolerance threshold defined in the information on the sub-fund.

Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the information on the sub-fund.

Class E:

distribution shares which differ from class **A** shares in that (i) they are reserved for eligible investors¹ acting on their own account, (ii) they have a minimum initial subscription amount, (iii) a different management fee and (iv) a different annual tax.

Class E USD:

distribution shares which differ from shares of class **E** due to the fact that they are denominated in United States dollars.

Class E EUR HEDGED:

distribution shares which differ from Class **E** shares due to the fact that the exchange risk against the euro is hedged. The manager must take measures to systematically hedge the exchange risk in relation to the sub-fund's reference currency within a tolerance threshold defined in the information on the sub-fund.

Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the information on the sub-fund.

Class M:

Distribution shares which differ from class **A** shares due to the fact that (i) they are reserved to investors having one or more current discretionary management mandates with one or more companies belonging to Degroof Petercam Group, (ii) they are reserved to the account(s) to which these discretionary management mandates apply, (iii) they are reserved for all-in mandates and in that (iv) they have a different management fee.

In this context, "all in" includes at least the management fees and custody fees charged on the account (s) to which these "all in" discretionary management mandates apply.

Class M USD:

distribution shares which differ from shares of class **M** due to the fact that they are denominated in United States dollars.

Class M EUR HEDGED:

distribution shares which differ from class **M** shares due to the fact that the exchange risk against the euro is hedged. The manager must take measures to systematically hedge the exchange risk in relation to the sub-fund's reference currency within a tolerance threshold defined in the information on the sub-fund.

Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the information on the sub-fund.

Class B:

capitalisation shares offered to the public.

Class B LC:

capitalisation shares which differ from class **B** shares due to the fact that (i) they are reserved for investors affected, directly or indirectly, by one or more current "Services Agreement Life Cycle" contracts with Degroof Petercam Asset Management, and (ii) that they have a different management fee.

Class B USD:

capitalisation shares which differ from shares of class **B** due to the fact that they are denominated in United States dollars.

Class B EUR HEDGED:

capitalisation shares which differ from class **B** shares due to the fact that the exchange risk against the euro is hedged. The manager must take measures to systematically hedge the exchange risk in relation to the sub-fund's reference currency within a tolerance threshold defined in the information on the sub-fund.

Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the information on the sub-fund.

Class L:

capitalisation shares which differ from shares of class **B** due to the fact that (i) they have a minimum initial subscription, and (ii) a management fee that may be different.

Class L USD:

capitalisation shares which differ from shares of class **L** due to the fact that they are denominated in United States dollars.

Class W:

capitalisation shares offered to the public which differ from class **B** shares due to the fact that (i) at the discretion of the management company they may be offered to distributors and platforms in the United Kingdom, Switzerland and European Union Member States, excluding Banque Degroof Petercam Belgium and Banque Degroof Petercam Luxembourg, (ii) they may be offered by distributors and platforms that have entered into separate remuneration agreements with their customers that are not subject to any rebate, and (iii) they are not subject to a rebate on management fees.

Class W USD:

capitalisation shares which differ from class **W** shares due to the fact that (i) they are denominated in US dollars.

Class W EUR HEDGED:

capitalisation shares which differ from class **W** shares in that the exchange risk against the euro is hedged. The manager must take measures to systematically hedge the exchange risk in relation to the sub-fund's reference currency within a tolerance threshold defined in the information on the sub-fund.

Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the information on the sub-fund.

Class F:

capitalisation shares which differ from class **B** shares due to the fact that (i) they are reserved for eligible investors¹ dealing on behalf of their own name, (ii) they have a minimum initial subscription amount, (iii) a different management fee and (iv) a different annual tax.

Class F LC:

capitalisation shares which differ from class **F** shares due to the fact that (i) they are reserved for investors affected, directly or indirectly, by one or more current "Services Agreement Life Cycle" contracts with Degroof Petercam Asset Management, (ii) they have no minimum initial subscription amount and (iii) that they have a different management fee.

Class F USD:

capitalisation shares which differ from shares of class **F** due to the fact they are denominated in United States dollars.

Class F EUR HEDGED:

capitalisation shares which differ from class **F** shares due to the fact that the exchange risk against the euro is hedged. The manager must take measures to systematically hedge the exchange risk in relation to the sub-fund's reference currency within a tolerance threshold defined in the information on the sub-fund.

Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the information on the sub-fund.

Class F USD HEDGED:

capitalisation shares which differ from class **F USD** shares due to the fact that the exchange risk against the US dollar is hedged. The manager must take measures to systematically hedge the exchange risk in relation to the sub-fund's reference currency within a tolerance threshold defined in the information on the sub-fund.

Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the information on the sub-fund.

Class F CHF HEDGED:

a capitalisation shares which differ from class **F CHF** shares due to the fact that the exchange risk against the Swiss franc is hedged. The manager must take measures to systematically hedge the exchange risk in relation to the sub-fund's reference currency within a tolerance threshold defined in the information on the sub-fund.

Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the information on the sub-fund.

Class J:

capitalisation shares which differ from shares of class **F** due to the fact that they are reserved for (i) investors for which there are currently one or more discretionary management mandates with one or several companies of the Degroof Petercam group, and (ii) accounts to which these discretionary management mandates apply, due to the fact that (iii) they have no minimum initial subscription amount and (iv) they have a different management fee.

Class J EUR HEDGED:

capitalisation shares which differ from class **J** shares due to the fact that the exchange risk against the euro is hedged. The manager must take measures to systematically hedge the exchange risk in relation to the sub-fund's reference currency within a tolerance threshold defined in the information on the sub-fund.

Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the information on the sub-fund.

Class N:

capitalisation shares which differ from shares of class **B** due to the fact that they are reserved for (i) investors for which there are currently one or more discretionary management mandates with one or several companies of the Degroof Petercam group, and (ii) accounts to which these discretionary management mandates apply, (iii) in that they are reserved for all-in mandates and due to the fact that (iv) they have a different management fee.

In this context, “all in” includes at least the management fees and custody fees charged on the account (s) to which these “all in” discretionary management mandates apply.

Class N USD:

capitalisation shares which differ from shares of class **N** due to the fact they are denominated in United States dollars.

Class N EUR HEDGED:

capitalisation shares which differ from class **N** shares due to the fact that the exchange risk against the euro is hedged. The manager must take measures to systematically hedge the exchange risk in relation to the sub-fund's reference currency within a tolerance threshold defined in the information on the sub-fund.

Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the information on the sub-fund.

Class P:

capitalisation shares which differ from class **F** shares by the absence of (i) a management fee and (ii) capitalisation shares which differ from class **F** shares by the fact that (i) they have no management fee (ii) no minimum initial subscription amount and (iii) due to the fact that they are reserved for investors that have one of more discretionary mandates with Degroof Petercam Asset Management and (iv) they are reserved for the accounts where this discretionary mandates are applicable.

Class P EUR HEDGED:

capitalisation shares which differ from class **P** shares due to the fact that the exchange risk against the euro is hedged. The manager must take measures to systematically hedge the exchange risk in relation to the sub-fund's reference currency within a tolerance threshold defined in the information on the sub-fund.

Investors are advised that implementing an exchange risk hedging policy may result in additional costs as mentioned in the information on the sub-fund.

Class Z:

capitalisation shares which differ from class **F** shares due to the fact that (i) they are reserved for investors where the minimum initial subscription amount is EUR 25,000,000 and (ii) they are subject to a different management fee and (iii) a different annual tax, it being understood that shareholders investing in this class may not request the partial redemption of their shares so as to reduce their level of investment to below the minimum initial subscription amount.

**“Eligible investors” are investors within the meaning of Article 5 of the Law of August 3, 2012 (the 2012 Law). Natural persons, as well as legal entities that are not part of the eligible investors within the meaning of the Law of 2012, do not have access to these share classes, even if subscriptions are made within the framework of a discretionary management mandate concluded with an eligible investor.*

- France
- Italy
- Luxembourg
- The Netherlands
- United Kingdom
- Switzerland
- Finland
- Sweden
- Portugal
- Singapore (only for institutional investors)

1.2. MANAGEMENT REPORT

1.2.1. Information for shareholders

General information

Information to shareholders

DPAM B is an undertaking for collective investment (UCI), hereinafter the SICAV.

The ordinary general meeting of shareholders of 20 March 2024 approved, among other things, the annual accounts closed on 31 December 2023 and the distribution of a dividend to the holders of distribution shares of certain sub-funds of the Sicav as mentioned in the notice published on March 22 March 2024.

The Ordinary General Meeting of 20 March 2024 also decided to:

- to renew the appointment of the Auditor, PwC Réviseurs d'Entreprises SRL, whose permanent representative is Briec Lefrancq, for a term of three years, until the General Meeting called to approve the financial statements for the year ending 31 December 2026;
- to appoint Mr Lucien Van den Brande as a non-executive director until the Annual General Meeting of 2026.

The Board of Directors has decided to clarify the use of the benchmark in the DPAM B Real Estate Europe Sustainable and DPAM B Real Estate Europe Dividend Sustainable sub-funds, and to amend the investment policy of the DPAM B Equities NEWGEMS Sustainable sub-fund, with effect from 31 March 2024.

The Board of Directors has decided to make the following changes with effect from 1st October 2024 :

- change the name of certain sub-funds :
DPAM B Bonds EUR into DPAM B Bonds EUR Government
DPAM B Bonds EUR IG into DPAM B Bonds EUR Government IG
DPAM B Bonds EUR Medium Term into DPAM B Bonds EUR Government Medium Term
- remove in the prospectus the word “maximum” from the portfolio management fees percentages. These rates will henceforth be effective rates.
- modify in the prospectus the percentage rates for the portfolio management fees of certain sub-funds as mentioned in the notice published on 30 August 2024
- update in the prospectus the section « Environmental, Social and Governance (ESG) Aspects – Sustainability Transparency » in the Article 8 SFDR sub-funds that promote environmental and/or social characteristics and have a minimum proportion of sustainable investments to incorporate the Taxonomy and use-of-proceeds bonds in accordance with DPAM’s ESG methodology.

Fee sharing agreements

Such agreements between, on the one hand, the SICAV or where applicable the distributor and the investment portfolio manager and, on the other hand, other distributors mentioned where relevant in the prospectus and third parties, including the shareholders of the undertaking for collective investment, may exist but are under no circumstances exclusive. These agreements do not affect the manager’s ability to perform his/her duties freely in the interests of the shareholders of the SICAV. The management fee is split according to the market conditions.

The information concerning the remuneration retroceded by the manager is taken up at the level of each sub-fund concerned under point "Charges".

Aberdeen and Fokus Bank

As the result of the Aberdeen and Fokus Bank rulings by the European Union Court of Justice concerning discrimination in the tax laws of certain EU Member States towards foreign UCIs, the SICAV has taken steps, with the help of the management company and external consultants, to reclaim the supplementary withholding tax paid and not recovered in some countries members of the EU. The costs will be charged immediately to the current financial year.

The SICAV recorded Aberdeen redemptions of EUR 1,274,538.26 during 2024.

Sub-Fund	Currency	Net amount in EUR

Class action

During 2024, the SICAV recorded redemptions in respect of Class Actions amounting to ILS 2.63 and USD 925.92.

Information required under Article 3:6 §1 of the Company and Association Code

Risk factors

In view of the status of DPAM B as a société d'investissement au capital variable (SICAV, or open-ended investment company), its development and results are influenced by various risk factors, including two over which the Board of Directors has little or no control:

- subscription and redemption applications,
- direct and indirect risks inherent in financial markets.

The risk factors, which are also described in the prospectus, can be broken down as follows:

Type of risk	DPAM B Bonds EUR Short Term 1 Y	DPAM B Bonds EUR Government (formerly DPAM B Bonds EUR)	DPAM B Equities Europe Small Caps Sustainable	DPAM B Equities Euroland	DPAM B Real Estate Europe Sustainable
Capital risk: Risk to capital, including the risks of erosion following redemptions of units and distributions in excess of returns	High	High	High	High	High
Inflation risk: Risk to which the value of the assets of the portfolio is exposed due to inflation	High	High	/	/	/
Market risk: Risk of a decline in the market for a given asset class that may affect the price and value of the assets in the portfolio	Low	Low	High	High	High
Credit risk: Risk of default of an issuer or counterparty	Low	Moderate	/	/	/
Settlement risk: Risk that the settlement of a transaction does not take place as expected in a given transfer system, due to a payment/delivery default by a counterparty, or a payment/delivery not conforming to the original conditions	/	/	/	/	/
Liquidity risk: Risk that a position cannot be closed at an appropriate time at a reasonable price	Moderate	Low	High	Low	High
Exchange risk: Risk of the value of the investment being affected by changes in exchange rates	/	/	Moderate	/	Moderate
Concentration risk: Risk linked to a high concentration of investments in a given class of assets or on a given market	Moderate	Moderate	Moderate	High	High
Performance risk: Risk to performance, including variability of the levels of risk depending on the stock-picking strategy of each sub-fund and/or UCI, and the existence or absence of third-party guarantees or restrictions on these guarantees	/	/	/	/	/
Risks relating to derivative products	Low	Moderate	Low	Low	Low
Sustainability risk: Risk of the probability of occurrence of an environmental, social or governance event that could lead to an actual or potential material loss in the value of the sub-fund as a result of that event	Moderate	Moderate	Low	Moderate	Low
Hedging risk : (only applicable for hedged share classes)	/	/	/	Low	/

Events after the reporting period

Following the decision by the MSCI index administrator to change the name of the 'MSCI ESG Leaders' indices to 'MSCI Selection' with effect from 3 February 2025, the names of the following sub-funds will be changed as follows:

Current name	New name
DPAM B Equities US ESG Leaders Index	DPAM B Equities US Selection MSCI Index
DPAM B Equities Japan ESG Leaders Index	DPAM B Equities Japan Selection MSCI Index

The 'ESG investment selection methodology' section of the prospectus for both sub-funds has been adapted to reflect these changes.

Portfolio Managers	6,700,063.05 €

- **Description of how compensation and benefits were calculated**

This information is available in the Compensation Policy prepared by Degroof Petercam Asset Management. The Remuneration Policy is available at <https://dpaminvestments.com/documents/remuneration-policy-enBE>

- **Results of assessments in the annual review by the management company of the general principles of the remuneration policy and their implementation**

The annual review of the compensation policy has led to the adoption of a new Remuneration Policy.

- **Significant change to the remuneration policy adopted**

The remuneration policy approved by the Board of Directors of the Management Company on February 14, 2017 has been modified in 2024. Details of the remuneration policy and the composition of the Remuneration Committee, are available at <https://www.dpaminvestments.com/documents/remuneration-policy-enBE>.

Regulation EU 2015/2365 of the European Parliament and the Council of 25 November 2015

In accordance with Article 13 and Section A of the Annex to the Regulation, the SICAV must inform investors of the use it makes of securities financing transactions and total return swaps in its annual and half-yearly reports.

This information is included in each sub-fund concerned by the requirements of the Regulation under the heading "Notes to the financial statements and other information".

Use of liquidity management tools

The Directors decided, pursuant to the Royal Decree of October 15, 2018 regarding the liquidity tools, to introduce the possibility of using the following liquidity tools:

I. SWING PRICING

1. List of sub-funds that may use swing pricing:

All of the SICAV's sub-funds will use swing pricing.

2. Description of the objective, operation and methodology of swing pricing:

Objective:

The objective is to reduce performance dilution due to net inputs or outputs. The performance of the SICAV may be eroded by frequent transactions due to large inflows or outflows and the SICAV may suffer from (in)direct trading costs involved in capital movements. Swing pricing offers investors already invested in the SICAV the possibility of not having to bear the transaction costs or the cost of illiquidity in the underlying financial markets generated by the entry or exit of investors.

With swing pricing, existing investors should, in principle, no longer indirectly incur the transaction fees, which will now be directly integrated into the calculation of the net asset value (NAV) and borne by the entering and exiting investors.

Swing pricing protects long-term investors, as an investor can only be affected by swing pricing on the day of subscription/redemption.

Methodology and operation:

The swing pricing method adopted is based on the following principles:

- It is a partial swing, which implies that a certain threshold must be crossed before the NAV is adjusted;
- It is a symmetrical swing, which is activated for both subscriptions and redemptions;
- The use of swing pricing is systematic, without favoring one or more categories of investors.

The swing threshold is the value determined as a trigger event for net subscriptions and redemptions. This threshold value is expressed as a percentage of the total net assets of the sub-fund in question.

The swing threshold is always applied.

Swing factor: the direction of the swing depends on the net flow of capital applicable to a NAV.

In the case of a net inflow of capital, the swing factor linked to subscriptions of shares in the sub-fund will be added to the NAV. For net redemptions, the swing factor linked to redemptions of shares in the sub-fund in question will be deducted from the NAV. In both cases, all entering/exiting investors on a given date will have the same NAV applied.

3. Maximum swing factor:

The maximum swing factor set to a maximum of 5% of the unadjusted NAV.

The threshold and swing factor will be published on the website www.funds.dpaminvestments.com/funds.html in the "Fees" section

4. Use of the swing pricing during the period:

The table below indicates, by sub-fund, the number of times and the dates when the swing pricing has been applied during the period covered by this report and the impact of this application for the purpose of calculating during the period covered by this report:

Trade date	Sub-fund	Swing threshold	swing_factor	Subscriptions/redemptions	Net amount	Impact on the performance

II. ANTI-DILUTION LEVY

1. List of sub-funds that may use the anti-dilution levy:

All of the SICAV's sub-funds may use "the anti-dilution levy".

2. Description of the objective, operation and methodology of the anti-dilution levy:

Objective:

The objective of this mechanism is to transfer the negative impact on the NAV of a sub-fund of the SICAV to the investors who generated this impact.

Methodology and operation:

If redemptions / subscriptions exceed a threshold, the SICAV may decide to impose an additional cost on incoming or outgoing investors, which will benefit the SICAV. Higher exit fees may be charged for large net outflows, and higher entry fees may be charged for large net inflows.

The anti-dilution levy will only be applied after an explicit decision of the Board of Directors of the SICAV. There is no automatic application of this mechanism. The Board of Director's decision relates both to the level of the threshold and the additional costs and whether or not to apply the mechanism if the threshold is exceeded.

It should be noted that these two mechanisms, swing pricing and the anti-dilution levy, cannot be applied to the same NAV.

3. Use of the anti-dilution levy during the period:

During the period covered by this report, no sub-fund of the Sicav used anti-dilution levy.

III. REDEMPTION GATES

1. Description of the objective, operation and methodology

This mechanism allows the SICAV to partially suspend the execution of requests for the redemption and/or repayment of units ("redemption gates") when the negative change in the balance of the liabilities of the company or sub-fund for a given day exceeds, for the day in question, a percentage (or threshold) determined by the Board of Directors.

The threshold above which this mechanism may be applied is set at 5% for all sub-funds.

The NAV calculation itself is not suspended as orders are partially executed.

Only the part of the requests for redemptions which exceeds the threshold is affected by this partial suspension. It must be applied proportionally to all requests for individual redemptions submitted by the closing date concerned.

The portion of the redemption requests not executed following this partial suspension will be postponed automatically to the next closing date, except in the event of revocation by the shareholder or if this mechanism is reapplied.

The partial suspension is always provisional.

This suspension will be carried out in accordance with the provisions of Article 198/1 of the Royal Decree of 2012.

In the event of a partial suspension of the execution of redemption and/or repayment requests, a notice to shareholders will be published on the website www.funds.dpaminvestments.com/funds.html in the "News" section.

2. Use of the redemption gates during the period

During the period covered by this report, no sub-fund of the Sicav used the redemption gates.

1.2.2. Overview of the markets

In 2024, world share prices measured in euros rose by 23.7% (excluding dividends). Every world region was up. The US markets outperformed other regions, ending the year up 32%. Emerging market equities gained 12.3%. At the back of the pack are European equities, which returned just under 6% in 2024 (still in euros and excluding dividends). The highlight of the period was the major contribution of the "Magnificent 7", who helped propel the S&P 500 and Nasdaq to new record highs. The Nasdaq gained 37% in euro terms. Market participants frequently expressed their concerns about the narrow performance of US indices. In Q3 2024, a catch-up in performance took place: technology stocks underperformed other sectors. However, in the final months of the year, the underlying trend resumed, and the "Magnificent 7" clearly outperformed the rest of the market. US 10-year bond yields rose during the year from 3.87% to 4.56%. The yield on German government bonds with the same maturity also rose, from 2.02% to 2.36% at the end of the period. The dollar remained in a narrow range of 1.05 to 1.12 against the euro for most of the year. By the end of the year, the dollar had appreciated to 1.03 against the euro. The price of gold rose sharply in response to expectations of a less restrictive monetary policy and in the face of geopolitical uncertainty. In the last 2 months of the year, US equities clearly outperformed the rest of the world. The return of Donald Trump to power has been interpreted as positive for US risky assets and the dollar, and more negative for foreign assets because of the tariffs he is proposing to introduce.

United States of America

US data continued to support the idea of a soft landing for the economy. Household consumption expenditure remained buoyant thanks to a solid labour market, wage gains and a favorable wealth effect. Overall, inflation continued its downward trend, although by the end of the year, core inflation remained above 3%. Fears of recession came back to the fore during the summer after a number of disappointing economic releases, including July's jobs report and business confidence indicators. At the end of the period, the economic data turned out better than expected, which reduced the risk of recession. The Federal Reserve cut rates by 0.50% in September, a larger cut than anticipated. This was followed by a second rate cut in November (-0.25%) and December (-0.25%). Good economic figures combined with slightly higher-than-expected inflation figures forced the Fed to become more cautious in December about its prospects for future rate cuts.

Eurozone

The eurozone economy finally emerged from a period of economic stagnation in Q1 2024. Expansion continued in Q2, before the economic outlook for the eurozone darkened again from Q3 2024 onwards. The labour market proved resilient during the period. The unemployment rate reached an all-time low at several points. However, hiring intentions have fallen sharply. Inflation continued to ease. However, services inflation remained well above the European Central Bank's target and showed little sign of improvement. Core inflation finally decelerated more noticeably in the final

months of the year. The European Central Bank lowered its key interest rate by 0.25% for the first time in June, a move widely expected by the markets. The ECB, which had refrained from cutting rates in July, reduced its key rate for a second time in September (by 0.50%), then for a third time in December (-0.25%), bringing the deposit rate to 3%. The European elections in early June and Emmanuel Macron's decision to call snap legislative elections in France brought volatility to European markets in June, particularly French risk assets. Political instability has also returned to Germany.

Japan

In March, the Central Bank of Japan finally raised its key interest rate, ending the era of negative rates. Nevertheless, the yen continued to weaken. After the July rate hike, and following the market instability this triggered, the central bank announced that it would refrain from further monetary adjustments as long as volatility persisted. The yen, which had depreciated sharply in the first half of the year, regained ground in the second half.

Emerging markets

Faced with the weakness of the Chinese economy and real estate market, the Chinese government has taken a series of measures to bolster activity. The stimulus measures announced in September were more significant and led to a sharp rise in Chinese risky assets. After rebounding by almost 40% at the end of September following the announcement of stimulus measures in China, Chinese equities gave up some of their gains over the last 3 months of the year. The Chinese government has been slow to give details of this recovery plan, and investors have lost patience with the overly general promises made by Chinese decision-makers. In the other emerging countries, economic growth remained robust in Asia. Latin American currencies depreciated against the euro and the dollar in 2024. In Brazil, the central bank began raising interest rates in the summer, a move that gained momentum towards the end of the year in response to good economic figures, excessive inflation and fears about the country's public finances.

1.3. AUDITOR'S REPORT

FREE TRANSLATION

STATUTORY AUDITOR'S REPORT TO THE GENERAL SHAREHOLDERS' MEETING OF DPAM B SA (PUBLIC INVESTMENT COMPANY WITH VARIABLE CAPITAL UNDER BELGIAN LAW) ON THE ANNUAL ACCOUNTS FOR THE YEAR ENDED 31 DECEMBER 2024

We present to you our statutory auditor's report in the context of our statutory audit of the annual accounts of DPAM B SA (Public Investment Company with variable capital under Belgian law) (the "Company"). This report includes our report on the annual accounts, as well as the other legal and regulatory requirements. This forms part of an integrated whole and is indivisible.

We have been appointed as statutory auditor by the general meeting d.d. 20 March 2024, following the proposal formulated by the board of directors. Our mandate will expire on the date of the general meeting which will deliberate on the annual accounts for the year ended 31 December 2026. We have performed the statutory audit of the Company's annual accounts for 7 consecutive years.

Report on the annual accounts

Unqualified opinion

We have performed the statutory audit of the Company's annual accounts, which comprise the balance sheet as at 31 December 2024, and the profit and loss account for the year then ended, and the notes to the annual accounts, with a globalised statement of total net assets of EUR 14.763.601.334,66 and of which the globalised result statement shows a profits for the financial year of EUR 1.870.556.668,24. An overview of the total net assets and the result of the financial year per sub-fund is provided in the table below:

In our opinion, the annual accounts give a true and fair view of the Company's net equity and financial position as at 31 December 2024, and of its results for the year then ended, in accordance with the financial-reporting framework applicable to Collective Investment Funds in Belgium (and in particular the Royal Decree of 10 November 2006).

Basis for unqualified opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs) as applicable in Belgium. Furthermore, we have applied the International Standards on Auditing as approved by the IAASB which are applicable to the year-end and which are not yet approved at the national level. Our responsibilities under those standards are further described in the "Statutory Auditor's responsibilities for the audit of the annual accounts" section of our report. We have fulfilled our ethical responsibilities in accordance with the ethical requirements that are relevant to our audit of the annual accounts in Belgium, including the requirements related to independence.

We have obtained from the board of directors and Company officials the explanations and information necessary for performing our audit.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Responsibilities of the board of directors for the preparation of the annual accounts

The board of directors is responsible for the preparation of annual accounts that give a true and fair view in accordance with the financial-reporting framework applicable in Belgium, and for such internal control as the board of directors determines is necessary to enable the preparation of annual accounts that are free from material misstatement, whether due to fraud or error.

FREE TRANSLATION

In preparing the annual accounts, the board of directors is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the board of directors either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Statutory auditor's responsibilities for the audit of the annual accounts

Our objectives are to obtain reasonable assurance about whether the annual accounts as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these annual accounts.

In performing our audit, we comply with the legal, regulatory and normative framework applicable to the audit of the annual accounts in Belgium. A statutory audit does not provide any assurance as to the Company's future viability nor as to the efficiency or effectiveness of the board of directors' current or future business management. Our responsibilities in respect of the use of the going concern basis of accounting by the board of directors are described below.

As part of an audit in accordance with ISAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the annual accounts, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control;
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the board of directors;
- Conclude on the appropriateness of the board of directors use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our statutory auditor's report to the related disclosures in the annual accounts or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our statutory auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern;
- Evaluate the overall presentation, structure and content of the annual accounts, including the disclosures, and whether the annual accounts represent the underlying transactions and events in a manner that achieves fair presentation.

FREE TRANSLATION

We communicate with the board of directors regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Other legal and regulatory requirements

Responsibilities of the board of directors

The board of directors is responsible for the preparation and the content of the directors' report, as well as for the compliance with the legal and regulatory requirements regarding bookkeeping, with the Companies' and Associations' Code and the Company's articles of association.

Statutory auditor's responsibilities

In the context of our engagement and in accordance with the Belgian standard which is complementary to the International Standards on Auditing (ISAs) as applicable in Belgium, our responsibility is to verify, in all material respects, the directors' report, as well as compliance with the articles of association and of certain requirements of the Companies' and Associations' Code and to report on these matters.

Aspects related to the directors' report

In our opinion, after having performed specific procedures in relation to the directors' report, the directors' report is consistent with the annual accounts for the year under audit, and is prepared in accordance with the articles 3:5 and 3:6 of the Companies' and Associations' Code.

In the context of our audit of the annual accounts, we are also responsible for considering, in particular based on the knowledge acquired resulting from the audit, whether the directors' report is materially misstated or contains information which is inadequately disclosed or otherwise misleading. In light of the procedures we have performed, there are no material misstatements we have to report to you.

Statements related to independence

- Our registered audit firm and our network did not provide services which are incompatible with the statutory audit of the annual accounts and our registered audit firm remained independent of the Company in the course of our mandate;
- The fees for additional services which are compatible with the statutory audit of the annual accounts referred to in article 3:65 of the Companies' and Associations' Code are correctly disclosed and itemized in the notes to the annual accounts.

FREE TRANSLATION

Other statements

- Without prejudice to formal aspects of minor importance, the accounting records were maintained in accordance with the legal and regulatory requirements applicable in Belgium;
- The appropriation of results proposed to the general meeting complies with the legal provisions and the provisions of the articles of association;
- There are no transactions undertaken or decisions taken in breach of the Company's articles of association or the Companies' and Associations' Code that we have to report to you.

1.4. IVOX GLASS LEWIS' S REPORT ON THE EXERCISE OF VOTING RIGHTS

**DEGROOF PETERCAM ASSET MANAGEMENT SA,
rue Guimard 18 B - 1040 - Brussels - Belgium**

Limerick, 2025

DPAM B

Glass Lewis Europe Limited: Vote analysis and execution report for the securities contained in the SICAV DPAM B (hereinafter the SICAV).

The Board of Directors of the SICAV has mandated DPAM, its management company, to organise the exercise of the voting rights attached to the shares held in the SICAV's portfolio and to vote, in its own name and on its own behalf, at the general meetings of the companies in which the SICAV is a shareholder to the extent of and in accordance with DPAM's Voting Policy (<https://dpaminvestments.com/documents/dpam-voting-policy-enBE> (Voting Policy)).

To this end, under the mandate granted to Glass Lewis Europe Limited by DPAM, Glass Lewis Europe Limited has implemented a vote analysis and execution service to assist DPAM in discharging its fiduciary responsibilities towards the SICAV.

An analysis of the resolutions demonstrating non-compliance with the SICAV's Corporate Governance principles, taking into account DPAM's Voting Policy, reports anomalies and, thanks to our voting execution service, has enabled the managers of DPAM to take the measures they deemed necessary. This analysis, which is set out in a document available on our service, is based on the recognised standards and principles of each financial centre concerned and on the corporate governance structure expected of each issuer.

DPAM, as mandated by the SICAV, approved the majority of the resolutions that were proposed at the various meetings. A resolution is not voted for if it is considered to be against the long-term interests of the shareholders and therefore of the SICAV. This is the case when the Board of Directors of the issuing company tries to set up capital defence structures or when the interests of the issuing company do not seem to coincide with those of the shareholder.

Glass Lewis Europe Limited has opened a file relating to each of the General Meetings at which DPAM, as mandated by the SICAV, exercised its voting rights on behalf of the SICAV during 2024.

Please see below for statistical information on voting rights exercised in 2024:

N/A – Any proposal for which no recommendation from the issuer's officers has been provided and which therefore could not be listed as FOR or AGAINST the officers.

No action – The term "No action" refers to any meeting that has intentionally not been voted on, whether automatically assigned this status by the system due to previous DPAM instructions (e.g. any ballot marked for share blocking), or manually assigned this status by an individual. This means that no voting instructions have been sent by the system.

Mixed – Refers to cases where different voting decisions have been selected for different accounts/ballots on the same agenda item in the same meeting.

1y – For the proposal Frequency of Advisory Vote on Executive Compensation, this item can appear on the voting card with the option to choose 1 YEAR, 2 YEARS or 3 YEARS, rather than the usual FOR, AGAINST, ABSTAIN.

2y – For the proposal Frequency of Advisory Vote on Executive Compensation, this item can appear on the voting card with the option to choose 1 YEAR, 2 YEARS or 3 YEARS, rather than the usual FOR, AGAINST, ABSTAIN.

3y – For the proposal Frequency of Advisory Vote on Executive Compensation, this item can appear on the voting card with the option to choose 1 YEAR, 2 YEARS or 3 YEARS, rather than the usual FOR, AGAINST, ABSTAIN.

1.7. SUMMARY OF BOOKING AND VALUATION RULES

1.7.1. Summary of rules

The valuation of the Company's assets, subdivided by sub-fund, is determined as follows:

- a. for securities admitted to official listing or traded on another organised market: at the last known stock exchange or market price, unless this price is not representative.
- b. for securities for which the last price is not representative and for securities not admitted to an official stock exchange or another organised market, the valuation is based on the probable realisable value estimated prudently and in good faith.
- c. for liquid assets: at their nominal value plus accrued interest.
- d. unmatured receivables will be valued pro rata temporis on the basis of their exact amount if known or, failing this, on the basis of their estimated amount.
- e. values expressed in a currency other than that of the sub-fund concerned will be converted into the currency of the sub-fund on the basis of the last known exchange rates.
- f. the notional amounts of forward contracts are included in off-balance sheet items under "III. Notional amounts of forward contracts". Futures contracts are recorded in off-balance sheet items on the basis of the following calculation: number of contracts multiplied by the price on the acquisition date multiplied by the lotsize; to be converted into the sub-fund's currency on the basis of the last known exchange rates if the futures contracts are expressed in a currency other than that of the sub-fund. Futures contracts are valued each time the net asset value is calculated on the basis of the last known market price, unless this price is not representative. Differences resulting from changes in the value of forward contracts are charged to the income statement as a reduction in value or unrealised gain, under the sub-heading "ii. Forward contracts" of the relevant sub-items of "I. Impairment losses and gains - F. Derivative financial instruments", or in sub-item "I. Write-downs, losses and gains - H. Foreign exchange positions and transactions. - a. Derivative financial instruments - ii. Forward contracts" if the underlying asset is a foreign currency.
- g. option contracts are valued at the time of each net asset value calculation on the basis of the last known market price, unless this price is not representative. Differences arising from changes in the value of contract premiums are charged to the income statement as a write-down or unrealised gain in sub-item "i. Option contracts" of the relevant sub-items of "I. Impairment losses and gains - F. Derivative financial instruments" or in sub-item "I. Write-downs, losses and gains - H. Foreign exchange positions and transactions - a. Derivative financial instruments - i. Option contracts" if the underlying asset is a foreign currency. When option contracts are exercised, the premiums are added to or deducted from the purchase or sale price of the underlying assets. Option contracts are recorded in off-balance sheet items under "II. Underlying values of option contracts and warrants" on the basis of the following calculation: number of contracts multiplied by the strike price multiplied by the quantity of underlying;
- h. notional amounts of swap contracts are included in off-balance sheet items under "IV. Notional amounts of swap contracts". Swap contracts are valued at the time of each net asset value calculation on the basis of the last known market price, unless this price is not representative. Differences resulting from changes in the value of swap contracts are charged to the income statement as a reduction in value or unrealised gain, under sub-item "iii. Swap contracts" of the relevant sub-items of "I. Impairment losses and gains - F. Derivative financial instruments" or in sub-item "I. Write-downs, losses and gains - H. Foreign exchange positions and transactions - a. Derivative financial instruments - iii. Swap contracts" if the underlying security relates to currencies.
- i. the underlying UCIs are valued at the time of each net asset value calculation on the basis of the last known prices, unless these prices are not representative.

To obtain the net assets, the valuation thus obtained is reduced by the Company's commitments.

In any event, the valuation of the assets of each sub-fund complies with the hierarchy provided for in article 12 of the Royal Decree of November 10, 2006 as follows:

§ 1. The Board of Directors of the investment company or the management company of the mutual fund determines the fair value, in accordance with the following hierarchy:

a) In the case of assets and liabilities for which an active market exists, with third-party financial institutions providing permanent quotations of bid and offer prices, the current bid and offer prices formed on this market are used to value the assets and liabilities respectively.

In the case of assets and liabilities that are traded on an active market without the involvement of third-party financial institutions as referred to in the previous paragraph, the closing price is used to determine fair value.

b) If the current bid price, the current ask price or the closing price referred to in point a) are not available, the price of the most recent transaction is used for the fair value measurement, provided that economic circumstances have not fundamentally changed since that transaction.

c) If there is an organized or over-the-counter market for a particular asset, but this market is not active and the prices quoted are not representative of fair value, or if there is no organized or over-the-counter market for a particular asset, fair value is determined on the basis of the current fair value of similar assets and liabilities for which there is an active market, provided that this fair value is adjusted to take account of differences between similar assets and liabilities.

d) If, for a given item of property, the fair value of similar items of property as referred to in c) does not exist, the fair value of the item concerned is determined using other valuation techniques, provided that these techniques :

- a. make maximum use of market data;
- b. comply with generally accepted economic methods for the valuation of financial instruments;
- c. are regularly calibrated and tested for validity using current market transaction prices for the asset concerned.

§ 2 If there is no organized or over-the-counter market for certain assets and liabilities, the valuation must also take account of their uncertain nature, due to the risk that the counterparties concerned may not be able to honor their commitments.

2. INFORMATION ABOUT THE SUBFUND DPAM B BONDS EUR SHORT TERM 1 Y

2.1. MANAGEMENT REPORT

2.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 06/08/1992

Subscription price during this period: EUR 123.98

2.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

2.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to offer shareholders exposure to the short-term bond market.

The portfolio of the sub-fund consists essentially of instruments issued by Investment grade* or Prime* issuers, as rated by a ratings agency such as Standard & Poor's, Moody's or Fitch. These issuers may be public authorities, companies or private issuers.

The portfolio is invested principally in bonds, treasury certificates and other debt securities or equivalent securities denominated in EUR.

The initial or residual maturity of the instruments making up the portfolio will not exceed twelve months.

This is an actively managed sub-fund.

No benchmark is used in the management of the sub-fund. Quantitative information from a broader market may be used for risk management and evaluation by the manager.

The sub-fund's shareholders do not benefit from any capital protection or guarantee.

* Investment Grade: is an interpretation in terms of financial risk of the quality of the bond's issuer. The rating agencies each use their own scale to assess the notion of risk. Investment grade ratings are between AAA and BBB- on the Standard & Poor's and Fitch scale and between Aaa and Baa3 on the Moody's scale.

*Prime: is a short-term rating that assesses the issuer's ability to meet its obligations within one year. Prime ratings are between A-1+ and A-3 on the Standard & Poor's scale, between F1+ and F3 on the Fitch scale and between P-1 and P-3 on the Moody's scale.

Investment policy

The sub-fund invests a maximum of 10% of its assets in undertakings for collective investment.

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities and in the form of undertakings for collective investment.

As a result of an exemption granted by the Autorité des Services et Marchés Financiers, the sub-fund may invest up to 100% of its assets in the various issues of transferable securities and money market instruments issued or guaranteed by a Member State of the European Economic Area which has adopted the euro as its currency (listed

below), and by its regional public bodies. These undertakings for collective investment must hold transferable securities and money market instruments belonging to at least six different issues, and transferable securities and money market instruments belonging to a single issue must not exceed 30% of the total value of their assets.

(*) Belgium, Germany, Finland, France, Greece, Luxembourg, Ireland, Italy, Netherlands, Austria, Portugal, Spain, Slovenia, Cyprus, Malta, Slovakia, Estonia.

The sub-fund may invest in units of another UCITS or another fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect holding of more than 10% of the capital or votes. No issue or redemption fees for target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

2.1.4. Index and benchmark

No benchmark is used in the management of the sub-fund.

2.1.5. Policy followed during the year

At the end of December 2024, the net asset value of DPAM B Bonds EUR Short term 1 Y (class B) amounted to €245.55. This represents a positive performance of 3.51% since the beginning of the year.

Monetary policy, which are set by central banks have a significant bearing on the Euribor.

The Euribor decreased during the the year, from 3.90 to 2.73.

These high interest rates make short-term bonds attractive. As a result, short-term bonds have again a very attractive yield. In view of persistent volatility, investors bought more short-term bonds.

For our portfolio we often went in search of a good mix of sectors. The majority of positions are financials, particularly bank bonds. These are predominantly high rated (A-). In the remaining sectors we constantly opted for good diversification, a good mix of ratings and geographical spread.

2.1.6. Future policy

- Search for bonds with a final maturity date of between 5 and 12 months.
- Corporate bonds, financials and government bonds within investment grade bonds in euros.
- Good diversification to be maintained in terms of countries, sectors and ratings.

2.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 2

2.6. ECONOMIC ALLOCATION OF INVESTMENTS

By sector	% Portfolio
BANKS	36.01%
FINANCIAL SERVICES - HOLDINGS	20.77%
ELECTRIC & ELECTRONIC COMPONENTS	7.49%
REAL ESTATE	6.78%
TELECOMMUNICATIONS	5.45%
BUILDING MATERIALS	4.09%
AIRLIFT	4.08%
INFORMATION, TECHNOLOGY & COPIERS	3.41%
ASSET & MORTGAGE BACKED SECURITIES	3.41%
IT & INTERNET	3.40%
STATES	2.73%
PHARMACOLOGY & PERSONAL CARE	2.38%
TOTAL	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

2.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	113,243,963.24	93,499,330.49	206,743,293.73
Sales	55,465,912.00	21,489,223.00	76,955,135.00
Total 1	168,709,875.24	114,988,553.49	283,698,428.73
Subscriptions	39,221,189.52	62,406,437.96	101,627,627.48
Redemptions	65,254,306.91	36,093,853.72	101,348,160.63
Total 2	104,475,496.43	98,500,291.68	202,975,788.11
Reference average of the total net asset	133,746,046.79	130,506,070.19	132,117,206.10
Rotation Percentage	48.03%	12.63%	61.10%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

2.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

2.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

2.11.1. Gross dividends paid in the financial year

2023 class M 1.00 EUR
 class V 1.00 EUR
 class A 1.00 EUR

2.11.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

2.11.3. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

2.11.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with a social objective </div> <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.
- excluding countries that do not respect a minimum of democratic requirements.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

● How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

1) For direct investments (in corporate bonds):

a) The Sub-fund has not been exposed to companies that are considered not to meet Global Standards;

b) The Sub-fund has not been exposed to companies involved in excluded controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

c) The Sub-fund has not been exposed to companies facing the most serious ESG controversies around environmental or social issues.

2) For direct investments (in sovereign bonds):

d) The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	97.7%	98.59%	98.28%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	No exposure	No exposure	No exposure

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

For direct investments (in corporate bonds):

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288, for direct investments in shares or corporate bonds.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD) Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis on the basis of the main ESG controversies in which companies may be involved also included controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity and water consumption), the environmental impact on the supply chain and the impact of products and services (carbon and environmental impact).

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) in addition, the filtering and analysis on the basis of the main ESG controversies in which companies may be involved also included controversies related to social issues, namely society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity has been addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and votes over the Reference Period are available in the voting report and the engagement report at <https://www.dpaminvestments.com>.

For direct investments (in sovereign bonds):

During the Reference Period, the Sub-fund took into consideration the environmental and social PAIs listed in table 1 of appendix I of the Delegated Regulation (EU) 2022/1288, for direct investments in sovereign bonds.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that DPAM developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries. The results of the country sustainability scores were discussed with the countries concerned according to DPAM's Engagement Policy, which is available at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>.

The second PAI relates to social issues and focuses on issues of social breaches. The country's sustainability model observes several indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to major labour conventions, the issue of equal opportunity and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other issuing countries.

During the Reference Period, the management teams have engaged in a dialogue on the results of the sustainability scores with certain countries according to DPAM's Engagement Policy (accessible via the link <https://www.dpaminvestments.com/documents/engagement-policy-enBE>).

Over the Reference Period, the management teams conducted a certain number of dialogues with the various participants in sovereign debt issues. These dialogues allowed us to verify with the stakeholders the points of attention of the governmental policies, notably in environmental and/or social matters.

Details of the dialogues with countries and companies will be published in an annual report in the first quarter of 2025 on the DPAM website (<https://www.dpaminvestments.com>).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

What was the asset allocation?

Through the application of the investment strategy described above, the Sub-fund has invested 98.28% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Financial and insurance activities	Financial service activities, except insurance and pension funding	50.41
Manufacturing	Manufacture of computer, electronic and optical products	7.34
Real estate activities	Real estate activities	6.65
Administrative and support service activities	Rental and leasing activities	4.05
Manufacturing	Manufacture of other non-metallic mineral products	4.05
Transportation and storage	Warehousing and support activities for transportation	4.03
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	3.41
Information and communication	Computer programming, consultancy and related activities	3.36
Information and communication	Telecommunications	3.34

Sector	Sub-sector	% Assets
Administrative and support service activities	Travel agency, tour operator reservation service and related activities	3.32
Professional, scientific and technical activities	Legal and accounting activities	3.32
Public administration	Public administration and defence; compulsory social security	2.67
Manufacturing	Other manufacturing	2.34
Liquid assets	Liquid assets	1.72

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☐ No

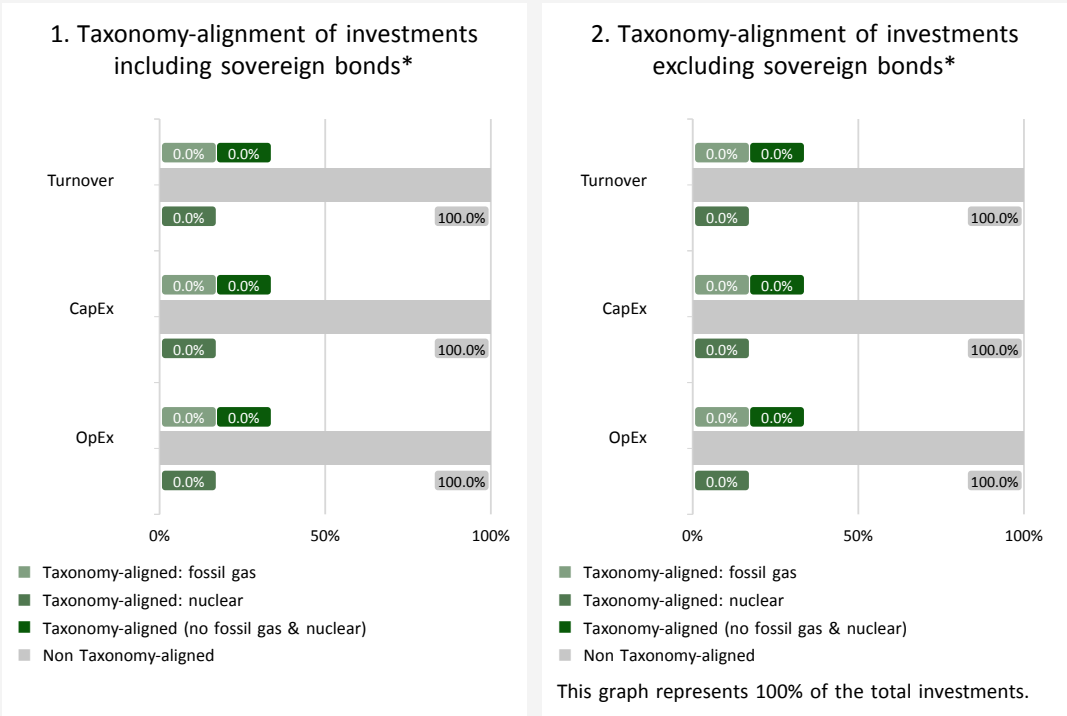

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

● What was the share of investments made in transitional and enabling activities?

Not applicable

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

Are sustainable investments with an environmental objective that **do not take into account the criteria** for

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.72% in liquid assets. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

For direct investments (in shares or corporate bonds):

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

For direct investments (in sovereign bonds):

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime"). The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

How did this financial product perform compared with the reference benchmark?

Not applicable

Reference benchmarks
are indexes to measure
whether the financial
product attains the
environmental or social
characteristics that they
promote.

- **How does the reference benchmark differ from a broad market index?**

Not applicable

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable

- **How did this financial product perform compared with the reference benchmark?**

Not applicable

- **How did this financial product perform compared with the broad market index?**

Not applicable

3. INFORMATION ABOUT THE SUBFUND DPAM B BONDS EUR GOVERNMENT (FORMERLY DPAM B BONDS EUR)

3.1. MANAGEMENT REPORT

3.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 04/10/1996

Subscription price during this period: EUR 123.98

On 26/10/2004, the capitalization and distribution shares were divided by four.

On 30/12/2004, this sub-fund absorbed the sub-fund Belinvest Bonds within the framework of merger by acquisition of the investment company Belinvest SA by DPAM VB SA (formerly DPAM INVEST B SA.)

3.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

3.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to offer shareholders exposure to the bond market.

The portfolio of the sub-fund consists essentially of short-, medium- and long-term instruments such as bonds and other debt securities or equivalent securities denominated in EUR, at fixed or floating rates, offering periodic or capitalised income and issued or guaranteed by Member States of the European Union.

The portfolio may also comprise government bonds (fixed-rate and variable-rate) issued by government agencies and by local authorities, government bonds denominated in a currency other than the country's local currency, and supranational agencies.

There is no rating requirement on the instruments making up the portfolio or their issuers.

The sub-fund's shareholders do not benefit from any capital protection or guarantee.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

Investment policy

The sub-fund invests a maximum of 10% of its assets in open-ended undertakings for collective investment.

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities and in the form of undertakings for collective investment.

As a result of an exemption granted by the Autorité des Services et Marchés Financiers, the sub-fund may invest up to 100% of its assets in the various issues of transferable securities and money market instruments issued or guaranteed by a Member State of the European Economic Area which has adopted the euro as its currency (listed below(*)) and by its regional public bodies.

These undertakings for collective investment must hold transferable securities and money market instruments belonging to at least six different issues, and transferable securities and money market instruments belonging to a single issue must not exceed 30% of the total value of their assets.

(*) Belgium, Germany, Finland, France, Greece, Luxembourg, Ireland, Italy, Netherlands, Austria, Portugal, Spain, Slovenia, Cyprus, Malta, Slovakia, Estonia.

The sub-fund may invest in units of another UCITS or another fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect holding of more than 10% of the capital or votes. No issue or redemption fees for target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

3.1.4. Index and benchmark

The sub-fund uses the following index as its benchmark: JPM EMU Government Bond Total Return.

This index is a bond index representing bonds issued by the governments of European countries where the euro is the official currency. The performance is calculated by reinvesting the coupons paid by the debt securities included in the index.

J.P. Morgan Securities PLC is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance.

The selection and weighting of the assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the sub-fund. Please refer to the "Investment Strategy" section in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The possible composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

3.1.5. Policy followed during the year

At the end of 2023, we were of the view that Europe was entering a recession, based on numerous red flags appearing across the European economy. However, 2024 turned out to be different, as against expectations, the European economy was able to stand its ground with low, but still positive real GDP growth. At the same time, though the year, inflation continued decreasing towards the ECB's target.

Consequently, based on our views, we held an overweight duration stance throughout the year. The interest rate on the German 10Y government bond started the year around 2% and ended the year higher at 2.40%.

We were however able to limit the negative contribution of our duration overweight by tactically increasing and decreasing duration based on an improved or diminished attractiveness of interest rates. More specifically, a 10Y German bund around 2% was becoming less attractive while a level around 2.50% appeared as clear value.

Additionally, as we believed the ECB should have cut more than it did, we were heavily positioned for a steepening of interest rate curves. Although they eventually did steepen more or less in line with expectations, it took longer than we expected.

Finally, as we stated last year, country allocations will become an even more important source of relative performance as the absence of the ECB in government bond markets makes country selection of the upmost importance. As we have been able to pick the right countries at the right time, we were able to significantly profit from this. Especially our allocations towards France, Romania, Germany, and Slovakia have added significant relative performance.

3.1.6. Future policy

Although the downward move in European government bond yields has been postponed versus our expectations a year ago, this does not mean the more structural move down is cancelled.

As Europe continues to remain in a stagflationary environment, where real GDP growth is below potential and inflation relatively in line with target, the ECB will have to continue lowering its policy rate. Consequently, market interest rates should also continue moving lower.

Although we agree that a Trump policy might be inflationary, we believe the effects will be more felt from a US perspective. Depending on the actual mix of the Trump policies and the consequent reaction of European leaders, this can also have more or less important effects on Europe. Independent of the size of these effects, we believe they will be negative for both growth and inflation.

Tariffs will make it even more difficult for the European economy to grow through trade and will as such push real growth lower. But especially the significant increase in tariffs on Chinese goods will lead to a further dumping towards other markets. Europe will again be on the receiving end and will as such import Chinese deflation with negative effects on European inflation.

As has been the case since the end of the ECB's bond purchasing programs since 2022, country selection will remain an important driver of relative performance. This as markets will have to continue focusing on country fundamentals in the absence of the ECB as a price-insensitive buyer. Especially our allocation towards France will be an important one given our current significant underweight. Over the coming months we will have to reassess our position there from a carry perspective given current spread levels, and not from improving risk premia.

3.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 3

TOTAL	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

3.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	189,889,242.20	155,259,366.00	345,148,608.20
Sales	131,230,802.88	251,757,812.83	382,988,615.71
Total 1	321,120,045.08	407,017,178.83	728,137,223.91
Subscriptions	116,443,561.98	103,464,524.85	219,908,086.83
Redemptions	74,783,669.19	216,944,460.94	291,728,130.13
Total 2	191,227,231.17	320,408,985.79	511,636,216.96
Reference average of the total net asset	1,016,753,079.14	1,004,283,276.95	1,010,484,107.55
Rotation Percentage	12.78%	8.62%	21.43%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

3.10. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B

Annual return:

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark. The benchmark is used to compare performance.

Fee sharing

As at 31 December 2024, 9,03% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

3.12. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

3.12.1. Gross dividends paid in the financial year

2019	class A 0.61 EUR
	class E 0.82 EUR
	class V 0.76 EUR
	class M 0.75 EUR
2021	class A 0.75 EUR
	class E 0.83 EUR

3.12.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

3.12.3. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

3.12.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- excluding countries that do not respect a minimum of democratic requirements.
- by systematically applying a policy for impact bonds (such as green and social bonds).

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

● How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.
- The percentage of impact bonds ("Green, Social & Sustainability bonds") in the portfolio was higher than the benchmark. Over the Reference Period, the percentage of impact bonds ("Green, Social & Sustainability bonds") in the portfolio was 6.43% while the benchmark was 3.04%.

● ...and compared to previous periods?

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	94.81%	98.77%	99.7%

Reference period	2022	2023	2024
Failure to respect the democratic minimum	No exposure	No exposure	No exposure
Impact bonds	Sub-fund: 6.04% Benchmark: 0.68%	Sub-fund: 7.35% Benchmark: 2.52%	Sub-fund: 6.43% Benchmark: 3.04%

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund took into consideration the environmental and social PAIs listed in table 1 of appendix I of the Delegated Regulation (EU) 2022/1288, for investments in sovereign bonds.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that DPAM developed for its sovereign bond strategies. Consequently, it is included in the country’s sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries. The results of the country sustainability scores were discussed with the countries concerned according to DPAM’s Engagement Policy, which is available at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>.

The second PAI relates to social issues and focuses on issues of social breaches. Countries that have not met the minimum democratic requirements have been excluded. The country’s sustainability model observes several indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to major labour conventions, the

issue of equal opportunity and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other issuing countries.

During the Reference Period, the management teams have engaged in a dialogue on the results of the sustainability scores with certain countries according to DPAM's Engagement Policy (accessible via the link <https://www.dpaminvestments.com/documents/engagement-policy-enBE>).

Over the Reference Period, the management teams conducted a certain number of dialogues with the various participants in sovereign debt issues. These dialogues allowed us to verify with the stakeholders the points of attention of the governmental policies, notably in environmental and/or social matters.

Details of the dialogues with countries and companies will be published in an annual report in the first quarter of 2025 on the DPAM website (<https://www.dpaminvestments.com>).

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

● What was the asset allocation?

Through the application of the investment strategy described above, the Sub-fund has invested 99.7% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

● In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Public administration	Public administration and defence; compulsory social security	93.70
Activities of extraterritorial organisations and bodies	Activities of extraterritorial organisations and bodies	4.16
Financial and insurance activities	Financial service activities, except insurance and pension funding	1.74
Construction	Civil engineering	0.09
Derivatives	Derivatives	-0.02
Liquid assets	Liquid assets	0.32

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy ¹?

☐ Yes:

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- ☐ In fossil gas
- ☐ In nuclear energy
- ☐ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?
Not applicable

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?
Not applicable

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

Are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

Over the Reference Period, for the purposes of achieving its investment objectives, portfolio diversification, liquidity management and/or risk hedging, the Sub-fund was exposed to 0.32% in liquid assets and -0.02% in derivatives. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime"). The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

How did this financial product perform compared to the reference benchmark?

Not applicable

How does the reference benchmark differ from a broad market index?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable
- **How did this financial product perform compared with the broad market index?**

4. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES EUROPE SMALL CAPS SUSTAINABLE

4.1. MANAGEMENT REPORT

4.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 07/12/1997.

Subscription price during this period: EUR 123.98.

On 16/12/2001 the shares were divided into three.

The sub-fund received all the assets of the DPAM CAPITAL B Equities Belgium sub-fund through a merger by absorption which took effect on 26 February 2021.

4.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

4.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is investment in shares of European companies with a small market capitalisation (1) at European level, selected on the basis of compliance with environmental, social and governance (ESG) criteria, and any securities giving entitlement to the capital of these companies.

The following are considered to be equivalent companies: companies resident in non-European countries that have a significant proportion of their assets, activities and profit or decision-making centres in Europe and which meet the criteria stated above. The investment policy favours the selection of companies based on their specific qualities, with no particular rules as to geographic or sectoral distribution.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

(1) The sub-fund invests mainly in European companies representing a small market capitalization, i.e. companies whose market capitalization does not exceed the largest market capitalization among the companies making up the MSCI Europe Small Cap Net Return index at the time of the initial investment

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities. The sub-fund invests a maximum of 10% of its assets in open-ended undertakings for collective investment.

No formal guarantee has been given either to the sub-fund or to its investors.

Investment policy

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

4.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: MSCI Europe Small Cap Net Return

This index is representative of the small-cap equity market in developed countries (as defined by MSCI and mainly based on the country of incorporation and the country of primary listing of its securities) in Europe.

The performance of this index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance and to determine the maximum authorized market capitalization of the underlying securities (see "Objectives of the sub-fund" above). The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark. The benchmark is not aligned with the promotion of the environmental and social characteristics of the fund. Please refer to the investment strategy in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The possible composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

4.1.5. Policy followed during the year

The DPAM B Equities Europe small caps fund invests in high quality, sustainable undervalued small cap companies with a minimum investment horizon of 3 to 5 years. The fund focuses on attractively valued sustainable quality stocks. For us, these are companies with a strong market position, active in attractive market segments. They have excellent management teams focused on sustainable value creation, make efficient use of their (mainly) internally generated cash flow and score well on our sustainability criteria. The fund pursues a bottom-up buy and hold approach. We reduce the huge universe by means of quantitative and qualitative filters and select a limited number of attractively valued sustainable quality stocks. Interviews with management and company visits are an important aspect of the analysis, as are the insights of our buy-side analysts. The geographical and sector allocation are the result of bottom-up stock picking but must conform to certain limits. In 2024 especially the US continued to see improved macro-economic data throughout the months, the destocking effect that affected all most industries in H2 2023 seemed to be over. Inflation across most developed countries moved significantly down which brought some comfort to the major central banks to start cutting rates. The US stock market massively outperformed (although mainly led by the Magnificent 7), while Europe equity markets were also up but way less than US stocks. Still lackluster economic growth, especially on the manufacturing side, a struggling China and political issues in France and Germany led to mediocre returns in Europe. Small caps were again left behind and underperformed for the 3rd consecutive year, as liquidity dried up and lead indicators remained weak. The fund outperformed its BM in 2024.

Some of the biggest positive contributors to the performance in 2024 were Van Lanschot (strong sector performance, while Van Lanschot saw healthy inflows and significant excess capital generation and distribution), Beazley (decent insurance premium growth, very strong technical and financial results and a cheap valuation helped the stock), Games Workshop (strong organic growth after the 2023 launch year and a multi-year deal with Amazon), Prysmian (continued strong order intake for this electrification play and a big US acquisition in very attractive market), Reply (continued to surprise positively on organic growth, while some peers were suffering), Diploma (strong organic growth, while they executed on their M&A agenda), Banca Generali (strong inflows and resilient net interest income), CTS Eventim (continued buoyant ticket sales and prices, while they did 2 acquisitions), Volusion (resilient organic growth in the UK residential ventilation market, while the company did their biggest acquisition in the company's history), D'ieteren (strong Belron & automotive results; high transaction multiples paid for Belron in insider transactions) and Tubize (strong performance of UCB on the back of recent launches and product approvals).

While some of the names that performed less well were Carbios (failed to close a deal with Indorama on the industrial demonstration plant), Stabilus (suffering from lower EV and SUV car sales where the content of powertrains is the highest, while cost inflation are weighing on profit margins), Bytes (organic sales slowing down, while their main supplier Microsoft has also changed the contractual terms & conditions with their resellers), Shurgard (real estate

has been underperforming as a sector, while Shurgard did a relatively expensive acquisition in the UK), Spirax (the steam business is suffering from lower project sales, especially in China) and Azelis (share overhang from private equity and a slower than expected recovery of organic growth post the destocking).

In the course of 2024, we sold positions that we estimated did not qualify as quality growth any longer and/or became too expensive. We fully divested our positions in Avanza, Alfen, CVS, Coor Services, Barco and TKH Group while we added new positions where we see materially better growth potential and structural drivers: Technogym, Intercos (liquidity window opened up with private placements), Intermediate Capital Group, Tag Immobilien, Sirius Immo, Fielmann, Financière de Tubize.

We carefully managed our exposure to semis throughout the semester and remain invested in VAT, Inficon and BESI, key beneficiaries in the next semis upcycle.

4.1.6. Future policy

We are maintaining our focus on quality sustainable names while remaining disciplined on valuation and staying away from value traps i.e. disrupted industries (retail, traditional media) and highly geared companies. The European small cap segment remains an attractive asset class. Studies have shown that in the longer-term small caps perform better than the universe of larger cap stocks. The high-quality sustainable companies on which we focus in this fund perform strikingly better in the longer term. An increased level of regulation coupled with an acceleration in disruptive trends will however penalize more and more unsustainable strategies. To the contrary, mid-sized flexible and sustainable players are likely to benefit from a trend to relocate part of the production in Europe. The name of the game is therefore not about buying expensive defensive rather than cheap cyclical. But is about staying away from value traps and hunting for the long-term sustainable business models with a solid balance sheet.

Small caps in Europe have become very cheap compared to the large cap universe (we have seen a pure de-rating rather than earnings linked stock reactions). Lead indicators remain sluggish, political uncertainty in France and Germany is not helping either, while the threat of US tariffs and a worsening economy in China are also holding back investors to re-enter Europe. The ECB will need to cut more as current interest rates are too restrictive. Positioning is extremely light to European small caps and (relative) valuations are extremely attractive, but catalysts are lacking for the time being. We remain of the view that the current weakness offers an attractive entry point for LT investors.

4.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 4

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

4.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	56,884,706.48	28,475,154.65	85,359,861.13
Sales	40,956,856.43	48,758,716.62	89,715,573.05
Total 1	97,841,562.91	77,233,871.27	175,075,434.18
Subscriptions	66,524,517.73	26,268,553.55	92,793,071.28
Redemptions	43,640,759.59	61,669,608.90	105,310,368.49
Total 2	110,165,277.32	87,938,162.45	198,103,439.77
Reference average of the total net asset	292,995,632.83	334,607,808.40	313,915,415.08
Rotation Percentage	-4.21%	-3.20%	-7.34%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

On the date of publication of this report, the net asset value per share is published on the following websites: <https://www.funds.dpaminvestments.com/funds.html> and www.beama.be. This information is also available at the counters of the financial services department.

4.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Fee sharing

As at 31 December 2024, 30,03% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

4.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

4.11.1. Gross dividends paid in the financial year

2019	class A 1.27 EUR
	class V 2.95 EUR
	class M 2.76 EUR
2021	class A 1.89 EUR
	class V 3.29 EUR
	class M 2.92 EUR
2022	class A 4.70 EUR

	class M 4.78 EUR
2023	class A 2.00 EUR
	class V 2.47 EUR
	class M 2.15 EUR

4.11.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

4.11.3. Investment restrictions and overruns

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The DPAM B Equities Europe Small Caps Sustainable fund takes the commitment to invest at least 30% of their assets in investments with an environmental objective according to the waterfall methodology. Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 17/05/2024 and 07/10/2024. On NAV date 17/05/2024, those assets represented 23.94% of the fund's NAV. The breach was closed after adapting the positions.

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The DPAM B Equities Europe Small Caps Sustainable fund takes the commitment to invest at least 30% of their assets in investments with an environmental objective according to the waterfall methodology. Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 12/11/2024 and 31/12/2024. On NAV date 12/11/2024, those assets represented 29.43% of the fund's NAV. The breach was closed after an adaptation of the fund's prospectus.

4.11.4. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

4.11.5. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

DPAM B EQUITIES EUROPE SMALL CAPS
SUSTAINABLE

Legal entity identifier:

549300IE87MW44R5QF87

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ Yes

☒ No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **62.83%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

During the Reference Period, derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund were not used for the purpose of promoting environmental and/or social characteristics.

How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. The Sub-fund has no exposure to issuers whose ESG score resulting from the manager's proprietary "scorecard ESG" rating model is below two out of five;
- e. The average weighted greenhouse gas (GHG) emissions intensity of the Sub-fund was below the average weighted greenhouse gas (GHG) emissions intensity of the benchmark, calculated over a rolling 3-year period: 802.77 tCO₂e/mn revenue compared to 1209.12 tCO₂e/mn revenue (as at 31/12/2024).

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	98.15%	99.16%	99.73%
Sustainable Investment	78.05%	76.72%	62.83%
Other Environmental Investments	37.59%	49.14%	31.27%
Social	73.63%	26.53%	28.18%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	No exposure	No exposure	No exposure
Sustainability indicator e.	Sub-fund: 673.57 Benchmark: 1152.98	Sub-fund: 1052.74 Benchmark: 1352.46	Sub-fund: 802.77 Benchmark: 1209.12

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments. The objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest in companies whose core business is the development of products and services that contribute to the achievement of the 17 environmental or social Sustainable Development Goals ("SDGs"), as defined by the United Nations (UN) (e.g. health products and services, education-related services, water saving and access solutions, energy efficiency solutions, digitalisation-enabling services, sustainable mobility services, etc.) via:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);
- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs; and
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to all the SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

For the Reference Period, the Sub-fund had 62.83% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 1.83% of the Sub-fund's portfolio contributed to the achievement of one or more of the environmental objectives defined by the EU;
- 31.27% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy through investments in companies aiming to make a net positive contribution to the environmental SDGs;
- 28.18% of the Sub-fund's portfolio contributed to the achievement of social objectives through investments in companies aiming to make a net positive contribution to the social SDGs; and
- 51.67% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to all the SDGs.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:

o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);

via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs. During the Reference Period, 51.67% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated into the entire research and investment process.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) The exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has excluded companies involved in thermal coal production for example, and thus has allowed for a better coverage of indicators such as biodiversity and greenhouse gas emissions.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines

on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
GAMES WORKSHOP GROUP PLC	Manufacturing	3.95	United Kingdom
DIPLOMA PLC	Wholesale and retail trade; repair of motor vehicles and motorcycles	3.92	United Kingdom
BEAZLEY PLC	Financial and insurance activities	3.75	United Kingdom
REPLY SPA	Professional, scientific and technical activities	3.61	Italy
D'IETEREN SA	Wholesale and retail trade; repair of motor vehicles and motorcycles	3.28	Belgium
BANCA GENERALI	Financial and insurance activities	3.28	Italy
ROYAL UNIBREW	Manufacturing	3.19	Denmark
ARCADIS NV	Professional, scientific and technical activities	2.96	Netherlands
IMCD N.V.	Wholesale and retail trade; repair of motor vehicles and motorcycles	2.81	Netherlands
INTERMEDIATE CAPITAL GROUP PLC	Financial and insurance activities	2.79	United Kingdom
BAKKAFROST	Agriculture, forestry and fishing	2.79	Norway
VAN LANSCHOT	Financial and insurance activities	2.72	Netherlands
TATE & LYLE PLC	Manufacturing	2.58	United Kingdom
CTS EVENTIM	Information and communication	2.51	Germany
ACKERMANS & VAN HAAREN	Construction	2.42	Belgium

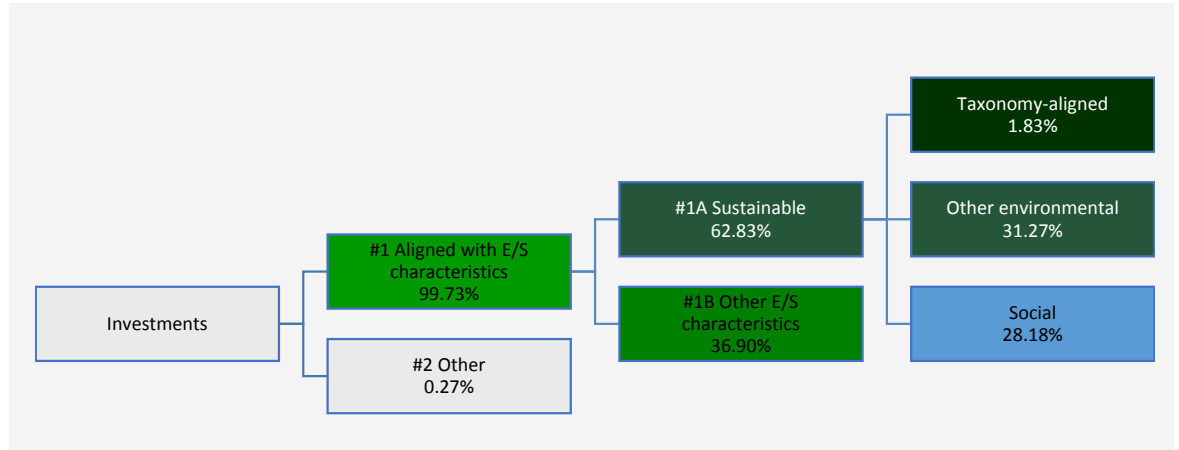

What was the proportion of sustainability-related investments?

What was the asset allocation?

During the Reference Period, by applying the investment strategy, the Sub-fund invested a minimum of 99.73% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S characteristics”).

The Sub-fund invested at least 62.83% of its assets in sustainable investments with environmental or social objectives (in the table referred to as “#1A Sustainable”).

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Wholesale and retail trade; repair of motor vehicles and motorcycles	Wholesale trade, except of motor vehicles and motorcycles	10.92
Manufacturing	Other manufacturing	7.36
Real estate activities	Real estate activities	6.38
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	6.00
Professional, scientific and technical activities	Architectural and engineering activities; technical testing and analysis	5.22
Financial and insurance activities	Financial service activities, except insurance and pension funding	5.18
Manufacturing	Manufacture of food products	4.98
Manufacturing	Manufacture of chemicals and chemical products	4.82
Information and communication	Motion picture, video and sound production and distribution	4.24

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of computer, electronic and optical products	4.17
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	3.75
Professional, scientific and technical activities	Other professional, scientific and technical activities	3.61
Manufacturing	Manufacture of paper and paper products	3.29
Wholesale and retail trade; repair of motor vehicles and motorcycles	Wholesale and retail trade and repair of motor vehicles and motorcycles	3.28
Manufacturing	Manufacture of beverages	3.19
Construction	Civil engineering	3.00
Manufacturing	Manufacture of machinery and equipment n.e.c.	2.83
Agriculture, forestry and fishing	Fishing and aquaculture	2.79
Information and communication	Computer programming, consultancy and related activities	2.50
Information and communication	Publishing activities	1.95
Manufacturing	Manufacture of rubber and plastic products	1.90
Manufacturing	Manufacture of electrical equipment	1.71
Arts, entertainment and recreation	Sports activities and amusement and recreation activities	1.50
Professional, scientific and technical activities	Scientific research and development	1.14
Wholesale and retail trade; repair of motor vehicles and motorcycles	Retail trade, except of motor vehicles and motorcycles	1.04
Manufacturing	Manufacture of wood and of products of wood and cork, straw and plaiting	0.77
Manufacturing	Manufacture of motor vehicles, trailers and semi-trailers	0.77
Water supply; sewerage; waste management and remediation activities	Waste collection, treatment and disposal activities; materials recovery	0.61
Manufacturing	Manufacture of fabricated metal products, except machinery and equipment	0.59
Administrative and support service activities	Office administrative, office support and other business support activities	0.26
Liquid assets	Liquidity	0.27

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM's methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy's Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 1.83% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 2.82% of investments contributed to climate change mitigation;
- 0.06% of investments contributed to climate change adaptation;
- 0% of investments contributed to the sustainable use and protection of water and marine resources,
- 0% of investments contributed to the transition to a circular economy;
- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☒ Yes:

☐ In fossil gas ☒ In nuclear energy

☐ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Transitional activities: 0.07%

Enabling activities: 1.87%

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	2.05%
1 January 2023 - 31 December 2023	1.04%
1 January 2024 - 31 December 2024	1.83%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 31.27% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

A sustainable investment is considered to have an environmental objective aligned with the EU Taxonomy if the issuer's eligible activities reach a 10% threshold of alignment with EU Regulation 2020/852 (Taxonomy Regulation). If the issuer's eligible economic activities do not reach the 10% threshold of alignment with the Taxonomy Regulation or if the issuer's economic activities are not covered by the Taxonomy Regulation, DPAM has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives.

This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to environmental objectives.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 28.18% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education, peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 0.27% in liquid assets. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

DPAM supplemented the various ESG exclusion filters using ESG risk and opportunities scorecards for each issuer in the portfolio. The scorecards were updated on an annual basis or ad hoc if an event should require a revision of the issuer's scorecard.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN Sustainable Development Goals. The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable

- **How did this financial product perform compared with the broad market index?**

Not applicable

5. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES EUROLAND

5.1. MANAGEMENT REPORT

5.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 19/04/1998

Subscription price during this period: EUR 123.98

On 16/12/2001, the shares of the sub-fund were divided by two.

5.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

5.1.3. Aim and main outlines of the investment policy

Objective

The principal objective of this sub-fund is investment in shares of companies having their registered office in one of the Member States of the European Union which have the euro as its national currency, and any securities giving entitlement to the capital of these companies. The following are considered to be equivalent companies: other companies that have a significant proportion of their assets, activities and profit or decision-making centres in the aforementioned countries.

More specifically, at least two-thirds of the sub-fund's investments are invested in stocks of companies which have their registered office or which carry out their primary economic activity in one of the European Union Member States which use the Euro as their national currency and any securities giving entitlement to the capital of these companies.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

The sub-fund may also hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities. The sub-fund invests a maximum of 10% of its assets in open-ended undertakings for collective investment

No formal guarantee has been given either to the sub-fund or to its investors.

Investment policy

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of the SFDR Regulation 2019/2088.

5.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: MSCI EMU Net Return

This index is representative of the large and mid-cap equity market in developed countries (as defined by MSCI and mainly based on the country of incorporation and the country of primary listing of its securities) in the EMU zone. The performance of this index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance.

The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the fund. Please refer to the investment strategy in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The possible composition and the value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

5.1.5. Policy followed during the year

Thanks to a good start of the year, the sub-fund recorded a positive return in 2024. Sectors that contributed most positively to the performance were financials, IT and industrials. Sectors having a negative impact were consumer staples and real estate.

Within IT, software and IT services holdings were strong contributors as good execution from SAP and Reply resulted in significantly better results than peers.

In financials, both insurance and bank stocks performed well, with Italian bank Unicredit and German re-insurer Munich Re standing out. The former continued to benefit from good profitability within the Italian retail banking environment while Munich Re was helped by another year of solid pricing.

Consumer Staples had a negative contribution as emerging market consumer weakness weighted on sales growth of companies like AB Inbev and Beiersdorf. Finally real estate holding Warehouses De Pauw fell back after a strong Q4 of 2023. While a more benign interest rate environment should have been helpful, macro-economic conditions in its markets and a lack of accretive acquisition opportunities weighed on the stock.

During 2024, a number of exits and new additions were made across both defensive and cyclical parts of the portfolio. Within luxury Brunello Cucinelli was added, switching our luxury exposure from LVMH and Moncler towards the more defensive quiet luxury segment. Growth expectations are based on low share of retail sales, potential geographic expansion, brand extension and specific market positioning in high-end luxury which is more resilient than the other luxury segment. Its low exposure to China makes it highly attractive in the context of slower economic growth in the Asian country. Industry wise, exposure to insurance was reduced following three years of good performance by re-insurance companies thanks to a good pricing environment. Remaining in financials, positioning was further shifted to countries like Italy and Ireland, showing better growth opportunities over the medium term.

Notable additions during 2024: AIB Group, Brunello Cucinelli, Bureau Veritas, Gerresheimer, Ryanair

Notable dis-investments in 2024: Alten, Kerry Group, Sodexo, Thales, UCB

5.1.6. Future policy

US presidential elections have added a sense of urgency to Europe's reform agenda. The contrast between current "US exceptionalism" on the one hand and struggling manufacturers in Europe on the other hand is large. As such the potential for more forceful policy changes in 2025, for example in Germany, present an option for a more durable re-rating of European equities.

In the absence of concrete evidence of a new industrial plan however, investment in the region will likely remain hesitant.

Given this backdrop, the manager maintains an investment approach with a medium to longer time focus, identifying good business models that can benefit from more structural rather than cyclical sources of growth.

5.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 4

AIRLIFT	1.11%
OTHER SERVICES	1.09%
CAPITAL GOODS (MISCELLANEOUS)	1.07%
COMMERCIAL & PUBLIC SERVICES	1.03%
MISCELLANEOUS CONSUMER GOODS	0.84%
REAL ESTATE	0.69%
TOTAL	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

5.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	173,624,830.51	133,871,291.19	307,496,121.70
Sales	113,835,112.13	66,127,270.82	179,962,382.95
Total 1	287,459,942.64	199,998,562.01	487,458,504.65
Subscriptions	172,583,586.88	134,477,511.63	307,061,098.51
Redemptions	110,929,139.90	76,921,825.47	187,850,965.37
Total 2	283,512,726.78	211,399,337.10	494,912,063.88
Reference average of the total net asset	717,533,855.85	813,562,699.78	765,810,651.71
Rotation Percentage	0.55%	-1.40%	-0.97%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

5.8. VALUE OF COMMITMENTS RELATING TO POSITIONS IN FINANCIAL DERIVATIVES

5.10. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B

Annual return:

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark. The benchmark is used to compare performance.

Table of historical benchmark performance (actuarial returns):

The sub-fund uses the following index as its benchmark: MSCI EMU Net Return.

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
MSCI EMU Net Return	9.48 % (in EUR)	4.41 % (in EUR)	6.60 % (in EUR)	6.87 % (in EUR)	18/04/1998	4.37 % (in EUR)

Fee sharing

As at 31 December 2024, 25,99% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

5.12. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

5.12.1. Gross dividends paid in the financial year

2019	class A 1.67 EUR
	class V 2.99 EUR
	class M 2.92 EUR

5.12.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

5.12.3. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

5.12.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with a social objective </div> <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

● How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a) The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- b) The Sub-fund has not been exposed to companies involved in excluded controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

c) The Sub-fund has not been exposed to companies facing the most serious ESG controversies around environmental or social issues.

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	97.39%	98.35%	97.58%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with DPAM's Controversial Activities Policy available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>).

In this way, companies involved in controversial armaments are directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report <https://www.dpaminvestments.com/documents/voting-activity-report-enBE> and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
SAP AG	Information and communication	6.86	Germany
ASML HOLDING	Manufacturing	5.78	Netherlands
SCHNEIDER ELECTRIC	Manufacturing	5.14	France
IBERDROLA SA	Electricity, gas, steam and air conditioning supply	4.10	Spain
AIR LIQUIDE (PORT)	Manufacturing	3.78	France
FERRARI NV	Manufacturing	3.75	Italy

Largest investments	Sector	% Assets	Country
ESSILOR	Manufacturing	3.49	France
BEIERSDORF	Manufacturing	3.17	Germany
PIRELLI & C S.P.A.	Manufacturing	2.81	Italy
ADIDAS NOM	Manufacturing	2.70	Germany
ALLIANZ (NOM)	Financial and insurance activities	2.58	Germany
PUBLICIS GROUPE	Professional, scientific and technical activities	2.25	France
SAFRAN	Manufacturing	2.24	France
ASM INTERNATIONAL	Manufacturing	2.09	Netherlands
LVMH	Manufacturing	2.03	France

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

What was the asset allocation?

Through the application of the investment strategy described above, the Sub-fund has invested 97.58% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Financial and insurance activities	Financial service activities, except insurance and pension funding	9.50
Manufacturing	Manufacture of chemicals and chemical products	7.81
Information and communication	Publishing activities	7.48
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	6.92
Manufacturing	Manufacture of electrical equipment	6.66

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of computer, electronic and optical products	5.78
Electricity, gas, steam and air conditioning supply	Electricity, gas, steam and air conditioning supply	5.53
Manufacturing	Other manufacturing	4.79
Manufacturing	Manufacture of motor vehicles, trailers and semi-trailers	4.57
Manufacturing	Manufacture of machinery and equipment n.e.c.	4.33
Manufacturing	Manufacture of rubber and plastic products	3.86
Wholesale and retail trade; repair of motor vehicles and motorcycles	Wholesale trade, except of motor vehicles and motorcycles	3.32
Manufacturing	Manufacture of wearing apparel	3.13
Manufacturing	Manufacture of leather and related products	2.70
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	2.25
Professional, scientific and technical activities	Advertising and market research	2.25
Manufacturing	Manufacture of other transport equipment	2.24
Professional, scientific and technical activities	Other professional, scientific and technical activities	2.08
Manufacturing	Manufacture of textiles	1.95
Manufacturing	Manufacture of beverages	1.72
Information and communication	Telecommunications	1.58
Mining and quarrying	Extraction of crude petroleum and natural gas	1.39
Manufacturing	Manufacture of wood and of products of wood and cork, straw and plaiting	1.35
Transportation and storage	Land transport and transport via pipelines	1.19
Transportation and storage	Air transport	1.08
Information and communication	Computer programming, consultancy and related activities	0.99
Real estate activities	Real estate activities	0.68
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.46
Derivatives	Derivatives	0.22
Liquidity	Liquid assets	2.20

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- ☐ In fossil gas
- ☐ In nuclear energy
- ☐ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Not applicable

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

Are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

Over the Reference Period, for the purposes of achieving its investment objectives, portfolio diversification, liquidity management and/or risk hedging, the Sub-fund was exposed to 2.2% in liquid assets and 0.22% in derivatives. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

The stages of the investment process are outlined below:

How did this financial product perform compared with the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**

Not applicable

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable

- **How did this financial product perform compared with the reference benchmark?**

Not applicable

- **How did this financial product perform compared with the broad market index?**

Not applicable

6. INFORMATION ABOUT THE SUBFUND DPAM B REAL ESTATE EUROPE SUSTAINABLE

6.1. MANAGEMENT REPORT

6.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 27/12/1999

Subscription price during this period: EUR 100.00

6.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

6.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to offer shareholders the highest possible long-term return through a balanced management policy, by investing its assets in securities representative of the real estate sector, in its broad sense, in Europe. These securities include but are not limited to shares of REITs, real estate certificates, shares of real estate companies and companies active in real estate promotion and development, shares in real estate debt investment funds etc. These companies are selected on the basis of compliance with environmental, social and governance (ESG) criteria.

More precisely, the sub-fund invests at least two-thirds of its assets in securities representative of the real estate sector issued by companies having their registered office or carrying out their primary economic activity in Europe.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts or deposits, as well as units in undertakings for collective investment. The sub-fund invests a maximum of 10% of its assets in open-ended undertakings for collective investment.

No formal guarantee has been given either to the sub-fund or to its investors.

Investment policy

The sub-fund may invest in units of another UCITS or another fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect holding of more than 10% of the capital or votes. No issue or redemption fees for target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of the SFDR Regulation 2019/2088.

6.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: GPR Europe UK 25% Capped Net Return

This index is representative of real estate companies listed in developed Europe. The GPR Europe UK 25% Capped Net Return is a tailor-made index for DPAM calculated by Global Property Research. In this index, the weight of the United Kingdom is capped at 25%.

Performance is calculated by reinvesting net dividends (Net Return).

Global Property Research is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare the performance.

The risk and return profile of the sub-fund may be aligned with that of the benchmark as the sub-fund invests mainly in the same securities as the benchmark. This may result in a tracking error of less than 3%.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the sub-fund. Please refer to the investment strategy in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The possible composition and the value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

6.1.5. Policy followed during the year

2024 was marked by high volatility in interest rates, with macroeconomic and geopolitical factors significantly influencing the fund's strategy. The year began on a negative note with rising long-term interest rates. However, from June to December, the Euro 5-year swap rate decreased by nearly 1%, aiding market recovery. The second half of the year experienced heightened political tensions in France and Germany, the election of Mr. Trump in the US, and the extension of conflicts in Ukraine and Israel.

In the physical real estate market, property values continued to decline, though this was partly cushioned by rising rent levels and the decline was materially lower than in 2023. Many properties have reached their trough valuation points towards the end of 2024. Depending on the type and size of assets, the investment market began to reopen slowly but steadily.

In the listed space, property companies continued their deleveraging strategies through asset disposals, dividend cuts, or equity injections.

The growth prospects in the US following Trump's election, coupled with renewed fear of higher inflation and higher interest rates and with European political tensions and conflicts, led investors to shy away from some European stock markets. The year-end saw a sell-off across all listed real estate sub-sectors, bringing the total return of the European listed real estate sector to approximately -3.6% for the year.

In this macroeconomic context, the fund increased its exposure mainly to the residential and self-storage subsectors while reducing its exposure to bonds and offices.

6.1.6. Future policy

For 2025, the further expected downwards rate path of the European Central Bank and a normalized financing environment, which is also due to affordable credit spreads, should increase transaction volumes in the investment market. This should set clearance prices for assets between equity rich buyers and equity poor and motivated sellers leading to a normalized real estate market.

Our strategy moving forward will depend on the outlook for companies in this volatile environment. We will continue to maintain a balanced portfolio. On one hand, we will focus on companies with strong balance sheets, robust growth prospects and a good earnings visibility. On the other hand, we will also consider companies that are currently challenged but have management teams capable of improving earnings and visibility. These companies trade at a significant discount, offering potential upside to their share prices.

The investment themes for the first half of 2025 are:

- Companies with strong balance sheets holding quality assets, as opposed to those with excessive leverage.
- Companies operating in subsectors with supply shortages and higher rents, rather than those with oversupply and lower rent growth.
- Companies with strong ESG profiles.
- Shares in companies that offer a higher dividend and lower beta compared to the benchmark of the fund.
- A focus on total return, combining sustainable dividends and capital appreciation from rental growth.
- Emphasis on long leases and quality tenants with competitive advantages to strengthen cash flows.
- In a highly volatile environment, capitalizing on excessive market movements by rebuilding positions in strong companies that have been excessively penalized, and vice versa.
- Companies that are clearly undervalued compared to industry peers

6.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 5

6.5. GEOGRAPHIC ALLOCATION OF INVESTMENTS

By country	% Portfolio
UNITED KINGDOM	22.45%
FRANCE	19.88%
GERMANY (FEDERAL REPUBLIC)	16.79%
BELGIUM	11.13%
SWEDEN	10.29%
SWITZERLAND	7.60%
SPAIN	3.41%
NETHERLANDS	3.12%
GUERNSEY	2.07%
LUXEMBOURG (GRAND DUCHY)	1.64%
FINLAND	1.21%
JERSEY	0.41%
Total	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

6.6. ECONOMIC ALLOCATION OF INVESTMENTS

By sector	% Portfolio
REAL ESTATE	92.58%
FINANCIAL SERVICES - HOLDINGS	4.10%
OTHER SERVICES	3.32%
TOTAL	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

6.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	75,999,837.55	45,497,398.80	121,497,236.35
Sales	61,972,512.04	23,081,138.92	85,053,650.96
Total 1	137,972,349.59	68,578,537.72	206,550,887.31
Subscriptions	56,791,120.37	39,653,013.90	96,444,134.27
Redemptions	57,513,883.83	19,763,863.04	77,277,746.87
Total 2	114,305,004.20	59,416,876.94	173,721,881.14
Reference average of the total net asset	430,178,259.79	473,741,474.79	452,078,892.47
Rotation Percentage	5.50%	1.93%	7.26%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

On the date of publication of this report, the net asset value per share is published on the following websites: <https://www.funds.dpaminvestments.com/funds.html> and www.beama. This information is also available at the counters of the financial services department.

6.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B

Annual return:

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark. The benchmark is used to compare performance.

DPAM B
REAL ESTATE EUROPE SUSTAINABLE

Table of historical benchmark performance (actuarial returns):

The sub-fund uses the following index as a benchmark: GPR Europe UK 25% Capped Net Return.

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
GPR Europe UK 25% Capped Net Return	-3.28 % (in EUR)	-9.81 % (in EUR)	-5.65 % (in EUR)	1.26 % (in EUR)	27/12/1999	5.30 % (in EUR)

Class A

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class A	-3.95 % (in EUR)	-10.10 % (in EUR)	-5.81 % (in EUR)	1.49 % (in EUR)	06/04/2000	5.25 % (in EUR)

Class W - BE6246059354:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.92 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.09 %

Fee sharing

As at 31 December 2024, 45,14% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

6.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

6.11.1. Gross dividends paid in the financial year

2019	class A 5.00 EUR class E 9.18 EUR class V 8.55 EUR class M 8.03 EUR
2020	class E 2,20 EUR (Interim dividends)
2021	class A 7.02 EUR class E 8.11 EUR class V 7.63 EUR class M 7.09 EUR
2022	class A 2.93 EUR class E 6.09 EUR class V 5.76 EUR class M 5.38 EUR
2023	class A 7.71 EUR class E 8.57 EUR class V 8.03 EUR class M 7.83 EUR

6.11.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

6.11.3. Investment restrictions and overruns

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The DPAM B Real Estate Europe Sustainable fund takes the commitment to invest at least 20% of their assets in investments with a social objective according to the waterfall methodology. Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 17/05/2024 and 31/12/2024. On NAV date 17/05/2024, those assets represented 0% of the fund's NAV. The breach was closed after an adaptation of the fund's prospectus.

6.11.4. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

6.11.5. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

Product name:
DPAM B REAL ESTATE EUROPE SUSTAINABLE

Legal entity identifier:

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> Yes		<input checked="" type="radio"/> <input type="radio"/> No	
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____%	<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 97.25% of sustainable investments	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with a social objective	<input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments
<input type="checkbox"/> It made sustainable investments with a social objective: ____%			

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

During the Reference Period, derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund were not used for the purpose of promoting environmental and/or social characteristics.

● How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. The Sub-fund has no exposure to issuers whose ESG score resulting from the manager's proprietary "scorecard ESG" rating model is below two out of five;
- e. As at 31 December 2024, the proportion of issuers with Science Based Targets initiative (SBTi) or equivalent in the Sub-fund's portfolio was 77.23% (by weight of portfolio assets). The target is to reach at least 50% by 2026.

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	98.27%	98.46%	99.26%
Sustainable Investment	94.35%	97.61%	97.25%
Other Environmental Investments	2.91%	7.46%	75.21%
Social	41.38%	27.43%	0.00%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	No exposure	No exposure	No exposure
Sustainability indicator e.	Sub-fund: 55.29	Sub-fund: 58.99	Sub-fund: 77.23

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments. The objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest (a) in companies whose core business is the development of products and services that contribute to the achievement of the 17 environmental or social Sustainable Development Goals ("SDGs"), as defined by the United Nations (UN) (e.g. health products and services, education-related services, water saving and access solutions, energy efficiency solutions, digitalisation-enabling services, sustainable mobility services, etc.) via:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);
- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs;
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to all the SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

For the Reference Period, the Sub-fund had 97.25% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 15.11% of the Sub-fund's portfolio contributed to the achievement of one or more of the environmental objectives defined by the EU;
 - 75.21% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy through investments in companies aiming to make a net positive contribution to the environmental SDGs;
 - 0% of the Sub-fund's portfolio contributed to the achievement of social objectives through investments in companies aiming to make a net positive contribution to the social SDGs; and
 - 97.25% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to all the SDGs.
- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:

o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);

via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs. During the Reference Period, 97.25% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with DPAM's Controversial Activities Policy available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
VONOVIA	Real estate activities	8.86	Germany
UNIBAIL-RODAMCO	Real estate activities	7.37	France
LEG IMMOBILIEN	Real estate activities	5.14	Germany
SWISS PRIME SITE	Real estate activities	3.85	Switzerland
SEGRO (REIT)	Real estate activities	3.73	United Kingdom
PSP SWISS PROPERTY (NOM)	Real estate activities	3.69	Switzerland
KLEPIERRE	Real estate activities	3.35	France
MERLIN PROPERTIES SOCIMI SA	Real estate activities	3.30	Spain
FASTIGHETS AB BALDER	Real estate activities	3.26	Sweden
GECINA	Real estate activities	3.02	France
COVIVIO	Real estate activities	2.78	France
BRITISH LAND	Real estate activities	2.67	United Kingdom
TAG TEGERNSEE IMMOBILIER	Real estate activities	2.66	Germany
LONDONMETRIC PROP	Real estate activities	2.49	United Kingdom
LAND SECURITIES GROUP PLC	Real estate activities	2.46	United Kingdom

What was the proportion of sustainability-related investments?

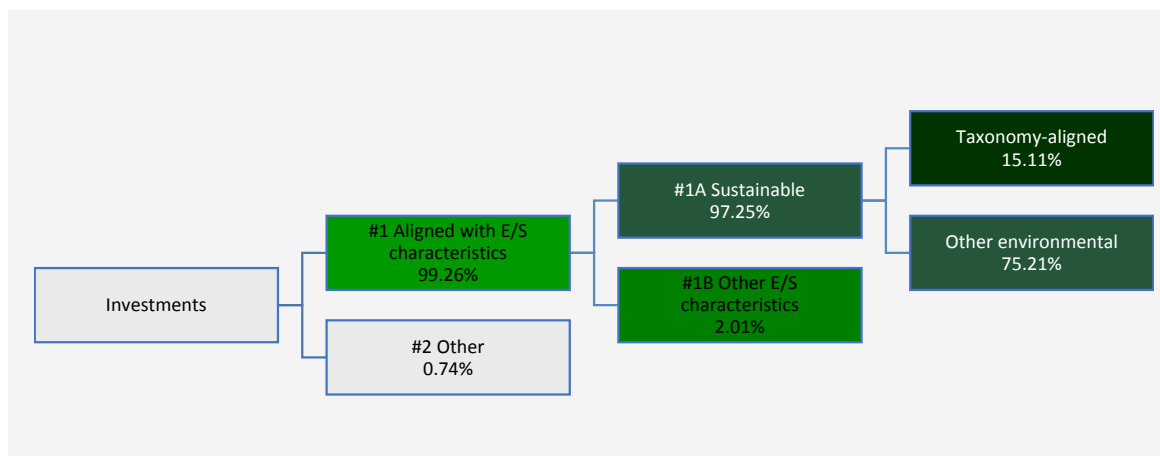

Asset allocation describes the share of investments in specific assets.

● What was the asset allocation?

During the Reference Period, by applying the investment strategy, the Sub-fund invested a minimum of 99.26% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S characteristics”).

The Sub-fund invested at least 97.25% of its assets in sustainable investments with environmental or social objectives (in the table referred to as “#1A Sustainable”).

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Real estate activities	Real estate activities	97.25
Accommodation and food service activities	Accommodation	1.42
Financial and insurance activities	Financial service activities, except insurance and pension funding	0.43
Transportation and storage	Warehousing and support activities for transportation	0.16
Liquidity	Liquid assets	0.74

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 15.11% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 12.21% of investments contributed to climate change mitigation;
- 1.19% of investments contributed to climate change adaptation;
- 0% of investments contributed to the sustainable use and protection of water and marine resources,
- 0% of investments contributed to the transition to a circular economy;
- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Transitional activities: 0.02%

Enabling activities: 0.35%

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	15.26%
1 January 2023 - 31 December 2023	15.2%
1 January 2024 - 31 December 2024	15.11%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This Sub-fund does not seek to make sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. As at 31/12/2024, however, 75.21% is indicated in the section "What was the asset allocation".

Are sustainable investments with an environmental objective that do **not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 0% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education, peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 0.74% in liquid assets. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

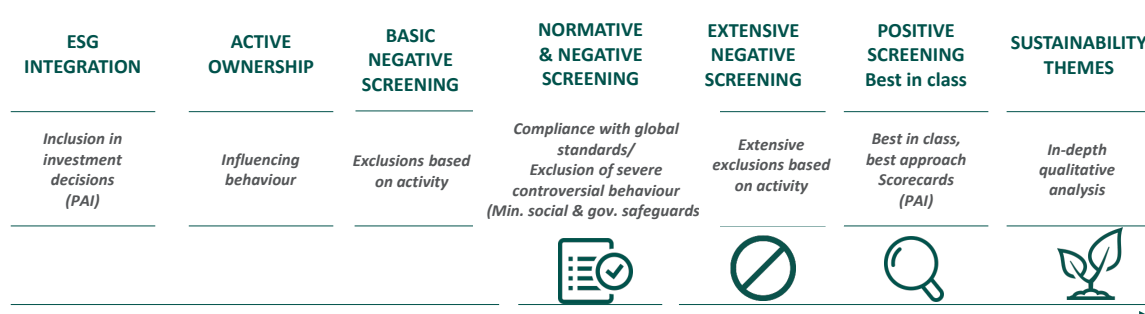

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

DPAM supplemented the various ESG exclusion filters using ESG risk and opportunities scorecards for each issuer in the portfolio. The scorecards were updated on an annual basis or ad hoc if an event should require a revision of the issuer's scorecard.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN SDGs.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable
- **How did this financial product perform compared with the broad market index?**
Not applicable

7. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES WORLD SUSTAINABLE

7.1. MANAGEMENT REPORT

7.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 14/12/2001

Subscription price during this period: EUR 24.79

F.N.I.C. initial value as at 25/02/1993. On 16/12/2001, the sub-fund received in contribution all the active and passive situation of the investment company F.N.I.C, in a report/ratio of one share F.N.I.C against three shares of DPAM INVEST B EQUITIES WORLD SUSTAINABLE in each class of shares.

The sub-fund has received the entire assets of the DPAM INVEST B Equities World Dividend sub-fund through a merger by absorption that took effect on 26 February 2021.

7.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

7.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to offer investors exposure to equities and/or equity-equivalent securities, issued by companies without any geographical restrictions, and to all securities giving entitlement to the capital of these companies, selected on the basis of a strict methodology in terms of compliance with environmental, social and governance (ESG) criteria.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

No formal guarantee has been given either to the sub-fund or to its investors.

Investment policy

The sub-fund invests mainly in equities and/or equity-equivalent securities issued by companies, without any geographical restrictions, and in all securities giving entitlement to the capital of these companies.

Stock-picking is based on economic and financial analyses and on a rigorous methodology of exclusions, integration of ESG factors, active shareholding and engagement with companies.

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities and in the form of undertakings for collective investment. The sub-fund invests a maximum of 10% of its assets in open-ended undertakings for collective investment.

The sub-fund may invest in units of another UCITS or another fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect holding of more

than 10% of the capital or votes. No issue or redemption fees for target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

7.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: MSCI AC World Net Return.

This index is representative of the large and mid-cap equity markets of 23 developed countries and 26 emerging countries (as defined by MSCI and mainly according to the country of incorporation and the country of primary listing of its securities) around the world.

The performance of this index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performances.

The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the sub-fund's sustainable investment objective. Please refer to the investment strategy in the prospectus for an explanation of how the sub-fund's sustainable investment objective is achieved.

The possible composition and the value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

7.1.5. Policy followed during the year

At the end of December 2024, the net asset value of DPAM B Equities World Sustainable (F share) amounted to 440.59EUR. This represents a 21.57% increase since the beginning of the year.

Markets continued to be driven by AI, boosting returns of big tech and TMT companies. The TMT sector contributed about two third of the fund's return in 2024. Zooming in on the IT sector, our semi exposure (Nvidia, TSMC) explains most of the strong performance. However, software did not contribute as much, as a strong performance from ServiceNow and SAP was significantly offset by disappointing returns from companies like Adobe and Synopsys. We added a couple of new IT names to the fund: Apple, Analog Devices, Broadcom and Oracle. We exited Intuit and Applied Materials. Outside of IT, Alphabet performed strongly.

Healthcare, our second biggest sector exposure, underperformed the fund. While our medical technology companies (Intuitive Surgical, Boston Scientific and Stryker) did very well, our life science tools companies ended the year on a weaker note. The sentiment turned negative as the end-market recovery remains blurry and the US elections created a geopolitical risk overhang. Nevertheless, Lonza stood out in that context. Diabetes and weight loss drug maker Novo Nordisk dropped into the camp of underperformers after their next generation obesity drug read-out failed to live up to expectations. We exited Edwards Lifesciences and Roche and added Zoetis and Eli Lilly to the portfolio.

Our financials underperformed the fund, with disappointing performances of HDFC Bank and MSCI. Both positions were exited during the period, together with Bank Central Asia. We continue to focus on financial toll roads like Mastercard, S&P Global, and Marsh & McLennan, while avoiding exposure to less differentiated businesses like most banks. We added Blackstone, the leading alternative asset manager, to the portfolio.

Our industrials exposure slightly underperformed the fund. Companies exposed to AI and data centers (Schneider Electric, Trane Technologies) delivered strong returns, while companies more exposed to construction (Kingspan, Sika), China (Epiroc) and semiconductors (Atlas Copco) underperformed. Automatic Data Processing performed well,

benefitting from its steady growth and higher visibility for a strong employment market. We fully exited IDEX Corp and Sika and maintained our strategy of investing in high quality companies with sustainable products. We bought Schneider Electric. We initiated opportunistically a position in Uber.

Our consumer bucket trailed the performance of the fund. In consumer staples, Procter & Gamble's strong return compensated weak returns from Estée Lauder, L'Oréal and Nestlé, while in consumer discretionary, Booking compensated for weaker returns of LVMH and Nike. We exited Estée Lauder, Nike and Nestlé and added Colgate-Palmolive and Hermès.

Our real estate companies lagged the performance of the fund. We exited both Equinix and American Tower.

7.1.6. Future policy

DPAM B Equities World Sustainable will continue its strategy of investing in high-quality large-cap companies with strong ESG credentials. These businesses are well-positioned to benefit from various long-term growth trends, including artificial intelligence, digital transformation, personalized and affordable healthcare, the green energy transition, luxury, electronic payments, and travel. Our investment philosophy is grounded in the conviction that sustainable, profitable growth drives stock prices over the long-term. Our high-quality approach is differentiated because of a rigorous ESG process and portfolio diversification. This results in a resilient portfolio that aims to perform well in different economic environments.

7.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 4

HEALTH CARE & SERVICES	1.95%
TELECOMMUNICATIONS	1.41%
BIOTECHNOLOGY	0.76%
TOTAL	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

7.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	577,185,339.60	829,564,622.12	1,406,749,961.72
Sales	565,692,980.47	684,163,332.78	1,249,856,313.25
Total 1	1,142,878,320.07	1,513,727,954.90	2,656,606,274.97
Subscriptions	338,084,700.60	297,391,823.35	635,476,523.95
Redemptions	283,719,480.23	178,873,517.19	462,592,997.42
Total 2	621,804,180.83	476,265,340.54	1,098,069,521.37
Reference average of the total net asset	2,165,196,206.02	2,396,950,390.25	2,281,706,506.29
Rotation Percentage	24.07%	43.28%	68.31%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

On the date of publication of this report, the net asset value per share is published on the following websites: <https://www.funds.dpaminvestments.com/funds.html> and www.beama.be. This information is also available at the counters of the financial services department.

7.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B

Annual return:

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark. The benchmark is used to compare performance.

DPAM B
EQUITIES WORLD SUSTAINABLE

Table of historical benchmark performance (actuarial returns):

The sub-fund uses the following index as its benchmark: MSCI AC World Net Return.

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
MSCI AC World Net Return	25.33 % (in EUR)	8.78 % (in EUR)	11.85 % (in EUR)	11.05 % (in EUR)	25/02/1993	

Class A

Table showing historical performance (actuarial returns):

Fee sharing

As at 31 December 2024, 34,59% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

7.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

7.11.1. Gross dividends paid in the financial year

2019	class A 0.48 EUR
	class V 1.81 EUR

	class E 3.40 EUR
2023	class A 2.28 EUR
	class V 2.34 EUR
	class M 2.35 EUR
	class E 2.36 EUR

7.11.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments were valued in the portfolio at the average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid prices and average prices varied significantly during the period, both over time and depending on the nature of the security.

7.11.3. Investment restrictions and overruns

Following the closure of the data provider with whom DPAM had been collaborating for data on alignment to the Sustainable Development Goals (SDGs), DPAM had to find another data provider. Alignment to the SDGs is used to calculate the minimum investment in assets with an environmental, social and sustainable investment objective. In line with the cascade methodology, the DPAM B Equities World Sustainable fund is committed to invest at least 30% of its assets in investments with an environmental objective. As a consequence of the change of supplier of data on alignment with the SDGs, a non-conformity was noted between the NAV dates of May 17, 2024 and May 21, 2024. On the NAV date of May 17, 2024, these assets represented 29.79% of the fund's NAV. of the fund's NAV. This non-compliance has been corrected thanks to market fluctuations.

In line with the cascade methodology, the DPAM B Equities World Sustainable fund is committed to investing at least at least 30% of its assets in investments with an environmental objective. At the NAV date of June 4, 2024, one non-compliance was noted. On the NAV date, these assets represented 29.95% of the fund's NAV. This non-compliance has been corrected thanks to market fluctuations.

7.11.4. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

7.11.5. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 68.17% of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);
- The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;

d. The Sub-fund had a better weighted average ESG profile than its benchmark, calculated over a rolling three-year period: 60.3 compared to 54.86 (as at 31/12/2024).

e. The average weighted greenhouse gas (GHG) emissions intensity of the Sub-fund was below the average weighted greenhouse gas (GHG) emissions intensity of the benchmark, calculated over a rolling 3-year period: 1035.86 tCO₂e/mn revenue compared to 1253.45 tCO₂e/mn revenue (as at 31/12/2024).

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	0.00%	98.37%	98.48%
Sustainable Investment	91.46%	96.86%	68.17%
Other Environmental Investments	47.22%	63.32%	39.64%
Social	89.67%	30.59%	26.62%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	Sub-fund: 55.06 Benchmark: 51.58	Sub-fund: 56.72 Benchmark: 52.62	Sub-fund: 60.3 Benchmark: 54.86
Sustainability indicator e.	Sub-fund: 653.02 Benchmark: 1178.04	Sub-fund: 1019.48 Benchmark: 1228.13	Sub-fund: 1035.86 Benchmark: 1253.45

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments. The objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest (a) in companies whose core business is the development of products and services that contribute to the achievement of the 17 environmental or social Sustainable Development Goals ("SDGs"), as defined by the United Nations (UN) (e.g. health products and services, education-related services, water saving and access solutions, energy efficiency solutions, digitalisation-enabling services, sustainable mobility services, etc.) via:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);
- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs;
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to all the SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

For the Reference Period, the Sub-fund had 68.17% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 1.03% of the Sub-fund's portfolio contributed to the achievement of one or more of the environmental objectives defined by the EU;
- 39.64% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy.
- 26.62% of the Sub-fund's portfolio contributed to the achievement of social objectives.
- 65.7% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to all the SDGs.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:

o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);

via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs. During the Reference Period, 65.7% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines

on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with DPAM's Controversial Activities Policy available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
MICROSOFT	Information and communication	7.34	United States of America
NVIDIA CORP.	Manufacturing	6.12	United States of America
ALPHABET A	Information and communication	5.12	United States of America

LINDE PLC	Manufacturing	2.41	United States of America
ELI LILLY & CO	Manufacturing	2.27	United States of America

What was the proportion of sustainability-related investments?

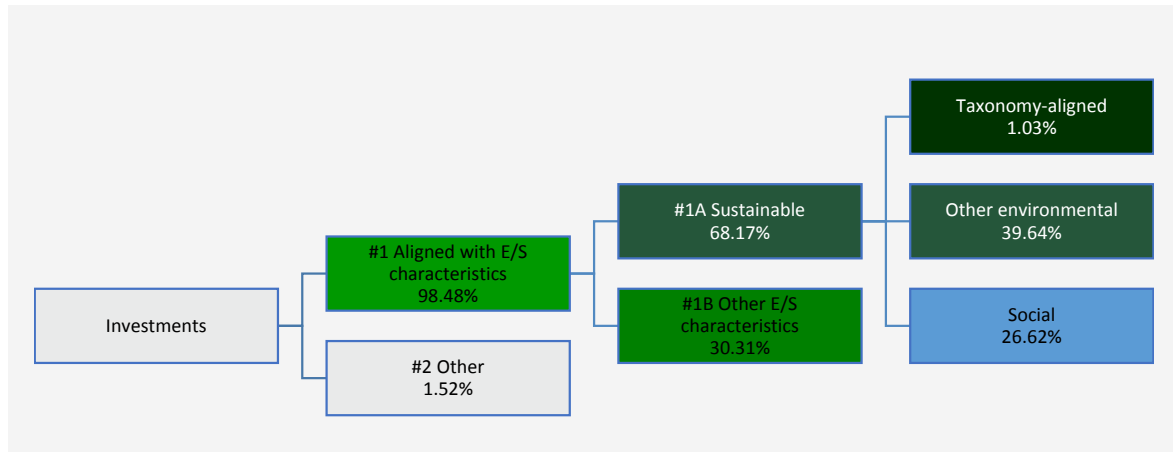

Asset allocation
describes the share of
investments in specific
assets.

What was the asset allocation?

By applying the investment strategy described above, the Sub-fund invests 98.48% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S characteristics").

The Sub-fund invested at least 68.17% of its assets in sustainable investments with environmental or social objectives (in the table referred to as "#1A Sustainable").

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Information and communication	Publishing activities	19.88
Manufacturing	Manufacture of computer, electronic and optical products	17.93
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	9.50
Manufacturing	Manufacture of chemicals and chemical products	8.36
Administrative and support service activities	Office administrative, office support and other business support activities	8.30
Manufacturing	Other manufacturing	6.70
Manufacturing	Manufacture of machinery and equipment n.e.c.	5.43
Information and communication	Information service activities	5.12
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	4.67

Sector	Sub-sector	% Assets
Administrative and support service activities	Travel agency, tour operator reservation service and related activities	2.53
Manufacturing	Manufacture of electrical equipment	2.13
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	1.92
Information and communication	Computer programming, consultancy and related activities	1.68
Manufacturing	Manufacture of textiles	1.44
Transportation and storage	Land transport and transport via pipelines	1.18
Manufacturing	Manufacture of wearing apparel	1.12
Manufacturing	Manufacture of wood and of products of wood and cork, straw and plaiting	0.59
Liquid assets	Liquid assets	1.52

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers.

The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 1.03% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 0.61% of investments contributed to climate change mitigation;
- 0% of investments contributed to climate change adaptation;
- 0% of investments contributed to the sustainable use and protection of water and marine resources,
- 0.09% of investments contributed to the transition to a circular economy;

- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

Transitional activities: 0%

Enabling activities directly enable other activities to make a

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

substantial contribution to an environmental objective.

Enabling activities: 0.67%

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	1.79%
1 January 2023 - 31 December 2023	0.41%
1 January 2024 - 31 December 2024	1.03%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 39.64% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

A sustainable investment is considered to have an environmental objective aligned with the EU Taxonomy if the issuer's eligible activities reach a 10% threshold of alignment with EU Regulation 2020/852 (Taxonomy Regulation). If the issuer's eligible economic activities do not reach the 10% threshold of alignment with the Taxonomy Regulation or if the issuer's economic activities are not covered by the Taxonomy Regulation, DPAM has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives.

This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to environmental objectives.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

Are sustainable investments with an environmental objective that do **not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 26.62% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education and peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.52% in liquid assets. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

Subsequently, on a semi-annual basis, the resulting universe was subject to a "best-in-class" ranking in order to retain only the best ESG profiles of companies on a list of securities eligible for management (25% of the lowest scores were removed from the eligible list by sector).

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN Sustainable Development Goals.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable
- **How did this financial product perform compared with the broad market index?**
Not applicable

8. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES EUROPE DIVIDEND

8.1. MANAGEMENT REPORT

8.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 16/09/2002

Subscription price during this period: EUR 100.00

8.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

8.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to offer shareholders exposure to the equity market.

The sub-fund's portfolio consists mainly of shares of companies having their registered office in a European country. Included in the category equities of companies that have their registered office in a European country are the equities of other companies that hold a significant proportion of their assets, activities, profit centre or decision-making centre in a European country.

The sub-fund may also invest in any other securities giving entitlement to the capital of the companies referred to above.

At least 50% of the portfolio must consist of equities and other securities mentioned above that generate a dividend yield or an expected dividend yield higher than the average represented by the MSCI Europe index.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

Shareholders of the sub-fund have no capital protection or guarantee.

Investment policy

The sub-fund invests up to 10% of its assets in open-ended undertakings for collective investment.

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities and in the form of undertakings for collective investment.

The sub-fund may invest in units of another UCITS or another fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect holding of more than 10% of the capital or votes. No issue or redemption fees for target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

8.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: MSCI Europe Net Return.

This index is representative of the large and mid-cap equity market of developed countries (as defined by MSCI and mainly based on the country of incorporation and the country of primary listing of its securities) in Europe. The performance of this index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performances.

The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the fund. Please refer to the investment strategy in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The possible composition and the value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>

8.1.5. Policy followed during the year

The sub-fund delivered a positive absolute performance in 2024, while lagging the broader European market. Largest negative impact on performance came from small and midcaps exposure, which suffered from a derating on the back of continued geopolitical tensions and macro uncertainty in the old continent. At sector level, Healthcare was the stand-out performer while Energy, Financials and Staples also contributed positively. On the other hand, Industrials was the largest negatively contributing sector, with Materials sector being also quite negative.

Healthcare was supported by strong stock picking across the board, with our deep fundamental analysis combined with strict valuation discipline (key to define entries and exits) paying off. Sanofi performance was underpinned by gradually improving sentiment about its pipeline (positive read outs in multiple sclerosis, chronic bronchitis and immunology) while AstraZeneca performed well in the first part of the year. For the latter, market gradually realized that the gradual margin improvement thesis was well supported by multiple drivers. At the same time, the breadth of Astra pipeline became obvious thanks to its "Capital Markets Day" disclosure against a previous excessive market focus on a high-profile oncology asset. Within the midcaps space, UCB delivered an exceptional performance as market sentiment on its key drug for psoriasis did a u-turn for the better over 12 months. Our small pick Lundbeck also generated a solid performance, on the back of continued solid earnings delivery of its Alzheimer and migraine drugs. Finally, Fresenius AG turn around got confirmed with a solid earning delivery combined with major progress on deleveraging and group simplification fronts.

Within Industrials, our high yielding small caps Eiffage, Aker ASA, Rexel and Sacyr suffered from a mix of derating (investors fleeing Europe macro sensitive small caps), poor European industrial production, uncertain magnitude of rate cuts and low political visibility in core European countries and China.

As far as Materials is concerned a similar weak performance from small caps was observed, with Verallia unable to keep its promise to defend margin in a weak demand environment for glass packaging while Aperam continued to face a weak environment for EU stainless steel and Syensqo still dealing with weak end markets (construction, autos).

Among key portfolio exits which took place in 2024, we would mention Verallia (unclear recovery path, thesis change), Konecranes, Lundbeck, UCB, Vistry (profit taking / valuation), Ayvens (low visibility and better value elsewhere). The fund started positions in GSK (Zantac clarity not yet rewarded), Merck kgAa (improving visibility on lifesciences), Anheuser-Busch Inbev (improving capital allocation flexibility post deleveraging progress), Arkema (discounted valuation and growth less macro dependent vs peers) and UPM (pulp price close to bottom while balance sheet optionality improved).

8.1.6. Future policy

While 2024 was marked by continued US macro and market exceptionalism, with a continued weak market breadth across and within asset classes, 2025 looks interesting with various potential inflection points, especially as most of our European high dividend investment universe trades close to depressed valuation levels.

Indications of European inflation coming under control have been seen, triggering Central Banks to start the rate-cut cycle although more is clearly needed to trigger an upturn in recessionary level of manufacturing activity. Domestically, improving political visibility post German (and French ?) elections (more fiscal stimulus and possibly reforms) may help as well. On the foreign policy front, China stimulus plan will be key to watch given the open European economy (very much trade sensitive). Besides, an end of to Ukraine war would undoubtedly help to lower the European risk premium (among other through lower energy prices). Finally, Trump policies (both their nature and impact) will be scrutinized closely and largely represent unknown risk factors, beyond the initial headline impact.

Overall, the peak uncertainty on many fronts combined with light investors positioning towards Europe has created many opportunities and a rising M&A activity in some of European market most depressed valuations segments (banks or renewable utilities) may provide a floor to the market. Going forward, the valuation-centric fund managers will continue to focus on resilient business models, solid balance sheets and high cash generation supporting a strong dividend capacity.

8.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 5

8.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	42,817,528.56	37,195,736.32	80,013,264.88
Sales	121,814,278.79	43,611,182.18	165,425,460.97
Total 1	164,631,807.35	80,806,918.50	245,438,725.85
Subscriptions	1,576,801.15	5,555,862.58	7,132,663.73
Redemptions	82,491,170.86	13,324,330.18	95,815,501.04
Total 2	84,067,972.01	18,880,192.76	102,948,164.77
Reference average of the total net asset	109,278,369.21	84,067,741.47	96,604,173.84
Rotation Percentage	73.72%	73.66%	147.50%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

8.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Fee sharing

As at 31 December 2024, 31,05% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

8.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

8.11.1. Gross dividends paid in the financial year

2019	class A 2.07 EUR
	class E 2.24 EUR
	class V 2.21 EUR
	class M 2.18 EUR
2020	class A 2.78 EUR
	class E 2.90 EUR
	class V 2.88 EUR
	class M 2.82 EUR
2021	class A 4.95 EUR
	class E 5.41 EUR
	class V 5.42 EUR
	class M 5.06 EUR
2022	class A 3.71 EUR
	class E 3.93 EUR
	class V 3.91 EUR
	class M 3.82 EUR
2023	class A 3.70 EUR
	class E 3.94 EUR
	class M 3.84 EUR

8.11.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

8.11.3. Investment restrictions and overruns

Between NAV Dates 16/02/2024 and 19/02/2024, a legal liability overrun was opened in the sub fund DPAM B Equities Europe Dividend. Indeed, a redemption of EUR1 MM took place on 14/02/2024 and 16/02/2024 for which several transactions were carried out to cover this situation. The order to sell 111,775 ALD SA shares was only partially cancelled on 14/02/2024, creating a negative cash amount of EUR-166,958.02. The remaining shares were sold the following day. The partial execution was caused by market conditions due to selling pressure on the market following the downgrade of broker ratings.

8.11.4. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific

European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

8.11.5. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with a social objective </div> <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

● How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a) The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- b) the Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

c) The sub-fund has not been exposed to companies facing extremely serious ESG controversies around environmental or social issues.

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	99.04%	99.41%	99.58%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and votes over the Reference Period are available in the voting report and the engagement report (available at <https://www.dpaminvestments.com>).

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
SANOFI	Manufacturing	4.81	France
GSK PLC	Manufacturing	4.74	United Kingdom
CARREFOUR	Wholesale and retail trade; repair of motor vehicles and motorcycles	3.44	France
MERCK KGAA	Manufacturing	3.35	Germany
ANHEUSER BUSCH INBEV	Manufacturing	3.26	Belgium
ASR NEDERLAND NV	Financial and insurance activities	3.12	Netherlands
STELLANTIS	Manufacturing	3.03	Italy
BNP PARIBAS	Financial and insurance activities	2.98	France

Largest investments	Sector	% Assets	Country
ARKEMA	Manufacturing	2.92	France
OMV AG	Mining and quarrying	2.76	Austria
FRESENIUS SE (ORD)	Manufacturing	2.71	Germany
EIFFAGE SA	Professional, scientific and technical activities	2.44	France
UPM-KYMMENE	Manufacturing	2.42	Finland
LEGAL & GENERAL GROUP PLC	Financial and insurance activities	2.37	United Kingdom
EDP ENERGIAS DE PORTUGAL	Electricity, gas, steam and air conditioning supply	2.31	Portugal

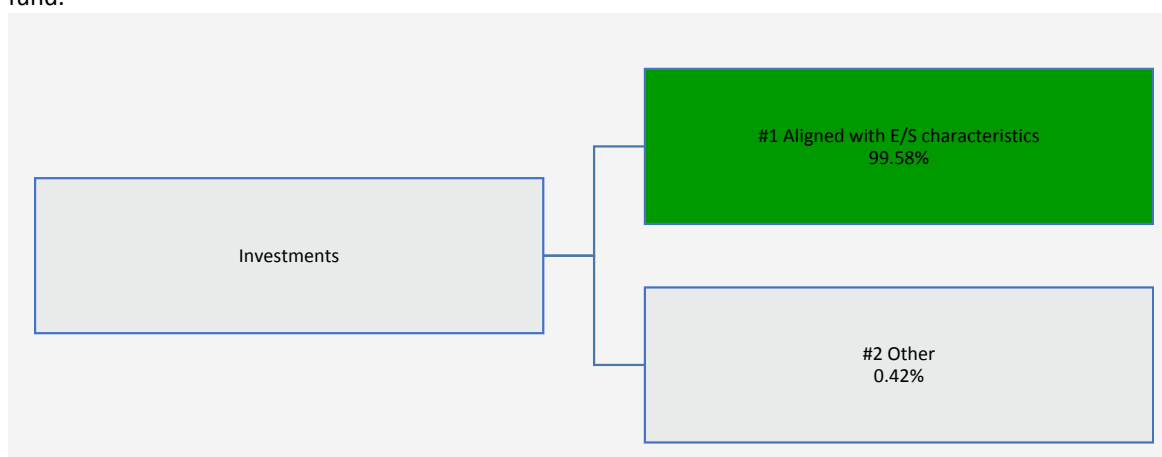

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

What was the asset allocation?

Through the application of the investment strategy described above, the Sub-fund has invested 99.58% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	15.54
Financial and insurance activities	Financial service activities, except insurance and pension funding	13.93
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	9.46
Electricity, gas, steam and air conditioning supply	Electricity, gas, steam and air conditioning supply	6.05

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of food products	5.69
Manufacturing	Manufacture of motor vehicles, trailers and semi-trailers	4.85
Real estate activities	Real estate activities	3.77
Wholesale and retail trade; repair of motor vehicles and motorcycles	Retail trade, except of motor vehicles and motorcycles	3.44
Manufacturing	Manufacture of beverages	3.26
Mining and quarrying	Extraction of crude petroleum and natural gas	3.14
Construction	Construction of buildings	2.99
Manufacturing	Manufacture of chemicals and chemical products	2.92
Manufacturing	Manufacture of machinery and equipment n.e.c.	2.90
Manufacturing	Manufacture of computer, electronic and optical products	2.71
Information and communication	Telecommunications	2.54
Professional, scientific and technical activities	Architectural and engineering activities; technical testing and analysis	2.44
Manufacturing	Manufacture of paper and paper products	2.42
Manufacturing	Manufacture of coke and refined petroleum products	2.23
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	1.81
Manufacturing	Manufacture of rubber and plastic products	1.69
Professional, scientific and technical activities	Scientific research and development	1.14
Transportation and storage	Air transport	1.01
Construction	Civil engineering	0.99
Water supply; sewerage; waste management and remediation activities	Water collection, treatment and supply	0.99
Manufacturing	Manufacture of basic metals	0.95
Administrative and support service activities	Services to buildings and landscape activities	0.72
Liquid assets	Liquidity	0.42

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☐ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria

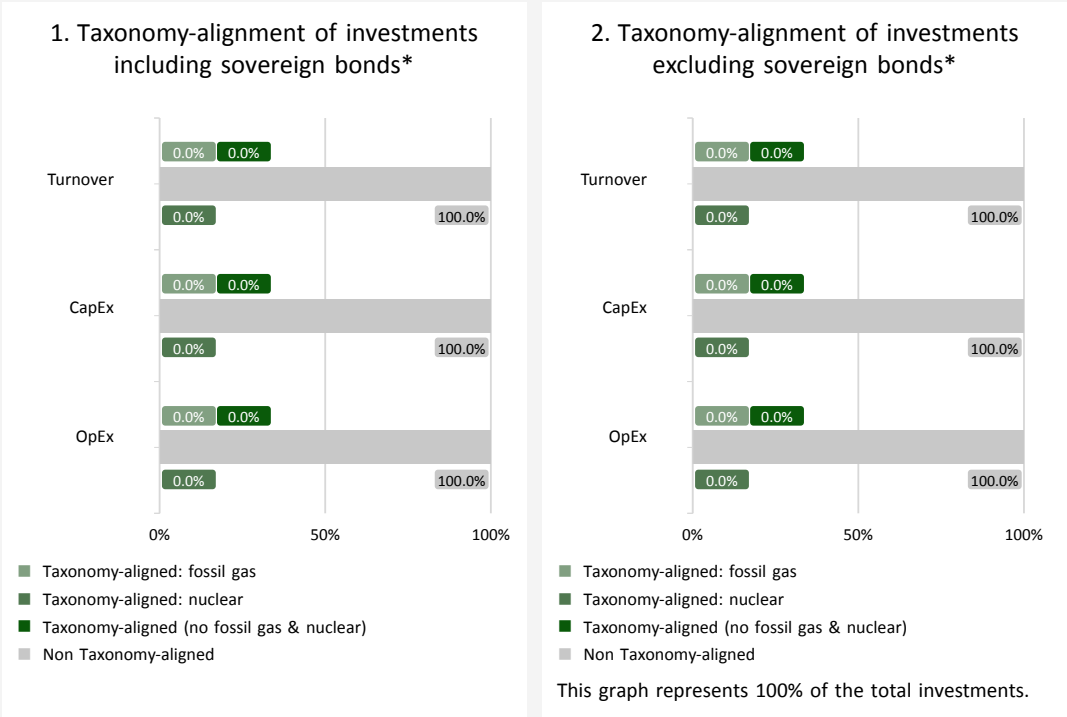

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Not applicable

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

Are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 0.42% in liquid assets. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

The stages of the investment process are outlined below:

How did this financial product perform compared with the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**

Not applicable

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable

- **How did this financial product perform compared with the reference benchmark?**

Not applicable

- **How did this financial product perform compared with the broad market index?**

9. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES EUROPE SUSTAINABLE

9.1. MANAGEMENT REPORT

9.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 31/12/2002

Subscription price during this period: EUR 100.00

On 18 November 2020, the sub-fund received all the assets and liabilities of the DPAM INVEST B Equities Europe sub-fund through a merger by absorption. The merger took effect on 26 November 2020.

9.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

9.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to enable shareholders to benefit from the growth of shares of European companies or other equivalent securities, selected on the basis of a strict methodology in terms of respect for environmental, social and governance (ESG) criteria.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

No formal guarantee has been given either to the sub-fund or to its investors.

Investment policy

To achieve its objective, the sub-fund invests in shares of European companies that meet certain environmental, social and governance criteria (ESG). The following are considered to be equivalent: other companies belonging to the aforementioned universe that have a significant proportion of their assets, activities and profit or decision-making centres in Europe. The sub-fund may also invest in any other securities giving entitlement to the capital of the companies referred to above.

The sub-fund may also hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities.

The sub-fund invests a maximum of 10% of its assets in open-ended undertakings for collective investment.

The sub-fund may invest in units of another UCITS or another fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect holding of more than 10% of the capital or votes. No issue or redemption fees for target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

9.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: MSCI Europe Net Return.

This index is representative of the large and mid-cap equity market of developed countries (as defined by MSCI and mainly based on the country of incorporation and the country of primary listing of its securities) in Europe.

The performance of this index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performances.

The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the sub-fund's sustainable investment objective. Please refer to the investment strategy in the prospectus for an explanation of how the sub-fund's sustainable investment objective is achieved.

The possible composition and the value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

9.1.5. Policy followed during the year

At the end of December 2024, the net asset value of DPAM B Equities Europe Sustainable (class B) was EUR 433.74. The yearly positive return of the fund was mainly driven by sector allocation. Sectors that contributed most positively were Financials, IT and consumer discretionary. The sectors which contributed negatively to the performance were: consumer staples, materials, healthcare and utilities. Consumer staples was particularly detrimental to performance as the sector was impacted by a slowdown in growth globally. Both food and HPC (home and personal care) sub-sectors have been the drivers of underperformance this year.

In consumer staples, Nestlé and L'Oréal have been the laggards. Nestlé like other food companies had to grapple with downtrading as consumers are adjusting their spending habits following a general increase in the cost of living as well as higher cost of goods sold. L'Oréal suffered from lower consumer demand in China and from the fact that global beauty market that is weakening faster than expected. In materials, Norsk Hydro experienced subpar demand in its key markets with soft extrusion markets given economically lackluster situation in the US and China. In healthcare, Novo Nordisk weighed on the performance due to capacity constraints in its GLP1 production site as the company is building new capacity as well as controversial study results of its oral GLP1 in obesity.

Selection in consumer discretionary (Compass Group, Intercontinental) and IT (SAP) contributed positively to the performance. All these companies over-delivered on expectations and did better than peers.

During 2024, some positions were changed. In healthcare, we sold Roche, Tecan and UCB. Both Roche and Tecan are suffering from operational challenges stemming lack of return on its innovation and lower R&D productivity while we favoured much more diversified companies with stronger pipelines over UCB. In materials, we sold Boliden, Croda, Kerry and Sika. Boliden continues to see lower mined grades, experienced a big TCRC contract reset for smelters all while still having elevated capex levels. The high macro and demand uncertainty in key end markets led us to exit Croda as well as Sika. Other disinvestments included Alten, Dassault Systèmes and SIG. On another note, we added holdings in companies where long-term growth prospects look sensibly good. Such was the case for Ferrari, Pirelli, AIB, Intermediate Capital Group, Fluidra, Prysmian and Novonesis.

In summary, in a market where diversification remains very important across sectors and styles we have been opportunistically exploiting volatility to add or reduce holdings depending on relative valuation. We have increased positioning in more stable growth areas and reduced more cyclical growth.

9.1.6. Future policy

European growth indicators, although not showing signs of deterioration, remain subdued. The overall decrease in interest rates and energy prices is viewed positively. Despite the disruptive impact of the monetary tightening cycle in various market segments, it has also opened up a broader range of stock picking opportunities. However, the importance of refinancing risks persists. Even with rates experiencing a decline from their peak, lower-quality companies are expected to face a more challenging financial landscape.

Our primary expectation remains an orderly economic slowdown. As the political agenda shifts towards the local level, we anticipate gaining more insights into the region's medium-term potential growth rate. Conversations with companies across sectors reveal advanced stages of destocking, while those aligned with structural trends express optimism about their future.

Given this backdrop, the manager maintains an investment approach with a medium to longer time horizon. The focus is on European companies with robust business models, steering clear of areas undergoing disruption.

9.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 4

9.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	368,324,650.63	111,784,384.60	480,109,035.23
Sales	236,001,133.52	365,743,552.02	601,744,685.54
Total 1	604,325,784.15	477,527,936.62	1,081,853,720.77
Subscriptions	276,705,157.66	134,291,297.65	410,996,455.31
Redemptions	155,601,071.41	416,887,249.82	572,488,321.23
Total 2	432,306,229.07	551,178,547.47	983,484,776.54
Reference average of the total net asset	1,849,817,435.07	1,862,517,471.14	1,856,202,152.66
Rotation Percentage	9.30%	-3.95%	5.30%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

9.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B

Annual return:

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark. The benchmark is used to compare performance.

Fee sharing

As at 31 December 2024, 22,37% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

9.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

9.11.1. Gross dividends paid in the financial year

2019	class A 2.87 EUR
	class E 4.90 EUR
	class V 4.63 EUR
	class M 4.57 EUR
2020	class A 2.49 EUR

	class M 6.37 EUR
2023	class A 5.00 EUR
	class E 5.72 EUR
	class V 5.63 EUR
	class M 5.38 EUR

9.11.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

9.11.3. Investment restrictions and overruns

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The DPAM B Equities Europe Sustainable fund takes the commitment to invest at least 30% of their assets in investments with an environmental objective according to the waterfall methodology. Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 17/05/2024 and 28/06/2024. On NAV date 17/05/2024, those assets represented 19.08% of the fund's NAV. The breach was closed after adapting the positions.

9.11.4. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of April 6, 2022, as amended, information relating to the achievement of the environmental or social characteristics promoted by this sub-fund can be found in the Periodic Information as defined by Regulation (EU) 2019/2088 of November 27, 2019 (SFDR) and attached to this periodic report. This periodic information has not been audited by the statutory auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to promote sustainable investment and amending Regulation (EU) 2019/2088 (the “Taxonomy Regulation”) establishes a “do no significant harm” principle whereby investments aligned with the Taxonomy Regulation should not cause significant harm to the objectives of the Taxonomy Regulation and is accompanied by specific European Union criteria. The “do no harm” principle applies only to investments underlying the financial product that take into account the European Union's criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the European Union's criteria for environmentally sustainable economic activities.

9.11.5. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

Product name:
DPAM B EQUITIES EUROPE SUSTAINABLE

Legal entity identifier:

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> Yes		<input checked="" type="radio"/> <input type="radio"/> No	
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____%	<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 60.70% of sustainable investments	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%		<input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments	

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

During the Reference Period, derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund were not used for the purpose of promoting environmental and/or social characteristics.

● How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. The Sub-fund had a better weighted average ESG profile than its benchmark, calculated over a rolling three-year period: 65.54 compared to 64.24 (as at 31/12/2024).
- e. The average weighted greenhouse gas (GHG) emissions intensity of the Sub-fund was below the average weighted greenhouse gas (GHG) emissions intensity of the benchmark, calculated over a rolling three-year period: 1150.68 tCO₂e/mn revenue compared to 1179.58 tCO₂e/mn revenue (as at 31/12/2024).

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	0.00%	97.91%	98.91%
Sustainable Investment	81.47%	91.27%	60.70%
Other Environmental Investments	52.05%	59.14%	29.05%
Social	77.41%	29.50%	27.97%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	Sub-fund: 60.69 Benchmark: 60.33	Sub-fund: 62.22 Benchmark: 61.57	Sub-fund: 65.54 Benchmark: 64.24
Sustainability indicator e.	Sub-fund: 718.18 Benchmark: 1125.27	Sub-fund: 623.4 Benchmark: 1181.64	Sub-fund: 1150.68 Benchmark: 1179.58

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments. The objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest in companies whose core business is the development of products and services that contribute to the achievement of the 17 environmental or social Sustainable Development Goals ("SDGs"), as defined by the United Nations (UN) (e.g. health products and services, education-related services, water saving and access solutions, energy efficiency solutions, digitalisation-enabling services, sustainable mobility services, etc.) via:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);
- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs; and
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to all the SDGs.

For the Reference Period, the Sub-fund had 60.7% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 3.68% of the Sub-fund's portfolio contributed to the achievement of one or more of the environmental objectives defined by the EU;
- 29.05% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy through investments in companies aiming to make a net positive contribution to the environmental SDGs.
- 27.97% of the Sub-fund's portfolio contributed to the achievement of social objectives through investments in companies aiming to make a net positive contribution to the social SDGs.
- 54.83% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to all the SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:

o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);

via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>);

- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs. During the Reference Period, 54.83% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) Similarly, social indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines

on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with DPAM's Controversial Activities Policy available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) Similarly, social indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the available TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
SAP AG	Information and communication	7.05	Germany
SCHNEIDER ELECTRIC	Manufacturing	5.67	France
ASTRAZENECA	Manufacturing	5.35	United Kingdom
NOVO NORDISK B	Manufacturing	5.06	Denmark
ASML HOLDING	Manufacturing	4.99	Netherlands
BEIERSDORF	Manufacturing	3.37	Germany
COMPASS GROUP PLC	Accommodation and food service activities	3.34	United Kingdom
ADIDAS NOM	Manufacturing	3.16	Germany
INTESA SANPAOLO (ORD)	Financial and insurance activities	3.03	Italy
ATLAS COPCO A	Manufacturing	2.88	Sweden
MUENCHENER RUECK (NOM)	Financial and insurance activities	2.87	Germany
DSV	Transportation and storage	2.57	Denmark
LONZA GROUP AG	Manufacturing	2.53	Switzerland
AIR LIQUIDE (PORT)	Manufacturing	2.51	France
PUBLICIS GROUPE	Professional, scientific and technical activities	2.46	France

What was the proportion of sustainability-related investments?

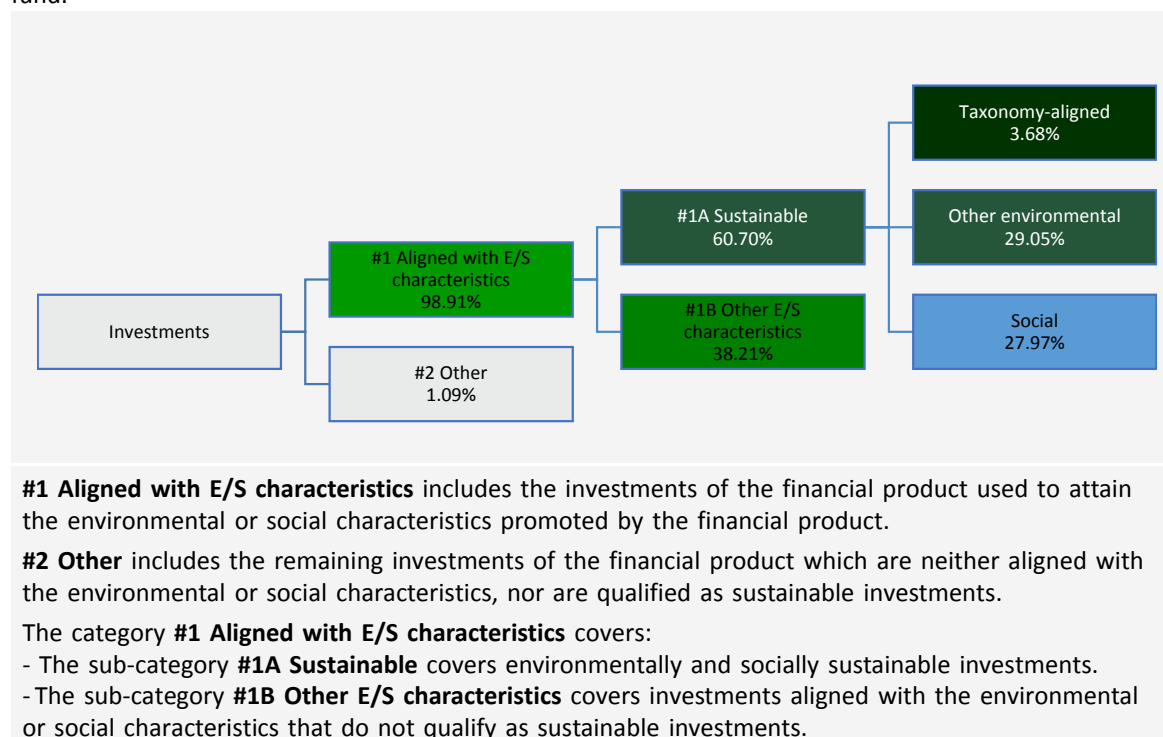

● What was the asset allocation?

By applying the investment strategy described above, the Sub-fund invests 98.91% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S characteristics").

The Sub-fund invested at least 60.7% of its assets in sustainable investments with environmental or social objectives (in the table referred to as "#1A Sustainable").

Asset allocation describes the share of investments in specific assets.

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

● In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	13.18
Manufacturing	Manufacture of chemicals and chemical products	9.55
Financial and insurance activities	Financial service activities, except insurance and pension funding	9.52
Manufacturing	Manufacture of machinery and equipment n.e.c.	8.39
Information and communication	Publishing activities	7.05
Manufacturing	Manufacture of electrical equipment	6.86
Manufacturing	Manufacture of computer, electronic and optical products	4.99
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	4.89
Accommodation and food service activities	Food and beverage service activities	3.34
Manufacturing	Manufacture of leather and related products	3.16
Manufacturing	Other manufacturing	2.73
Transportation and storage	Warehousing and support activities for transportation	2.57
Electricity, gas, steam and air conditioning supply	Electricity, gas, steam and air conditioning supply	2.49
Professional, scientific and technical activities	Advertising and market research	2.46
Accommodation and food service activities	Accommodation	2.18

Sector	Sub-sector	% Assets
Information and communication	Information service activities	1.96
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	1.92
Information and communication	Telecommunications	1.78
Manufacturing	Manufacture of wood and of products of wood and cork, straw and plaiting	1.51
Manufacturing	Manufacture of food products	1.46
Manufacturing	Manufacture of rubber and plastic products	1.26
Wholesale and retail trade; repair of motor vehicles and motorcycles	Wholesale trade, except of motor vehicles and motorcycles	1.19
Professional, scientific and technical activities	Other professional, scientific and technical activities	1.07
Manufacturing	Manufacture of wearing apparel	1.03
Manufacturing	Manufacture of motor vehicles, trailers and semi-trailers	1.00
Manufacturing	Manufacture of basic metals	0.86
Information and communication	Computer programming, consultancy and related activities	0.54
Liquid assets	Liquidity	1.09

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers.

The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 3.68% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 3.64% of investments contributed to climate change mitigation;
- 0% of investments contributed to climate change adaptation;
- 0% of investments contributed to the sustainable use and protection of water and marine resources,
- 0.23% of investments contributed to the transition to a circular economy;
- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

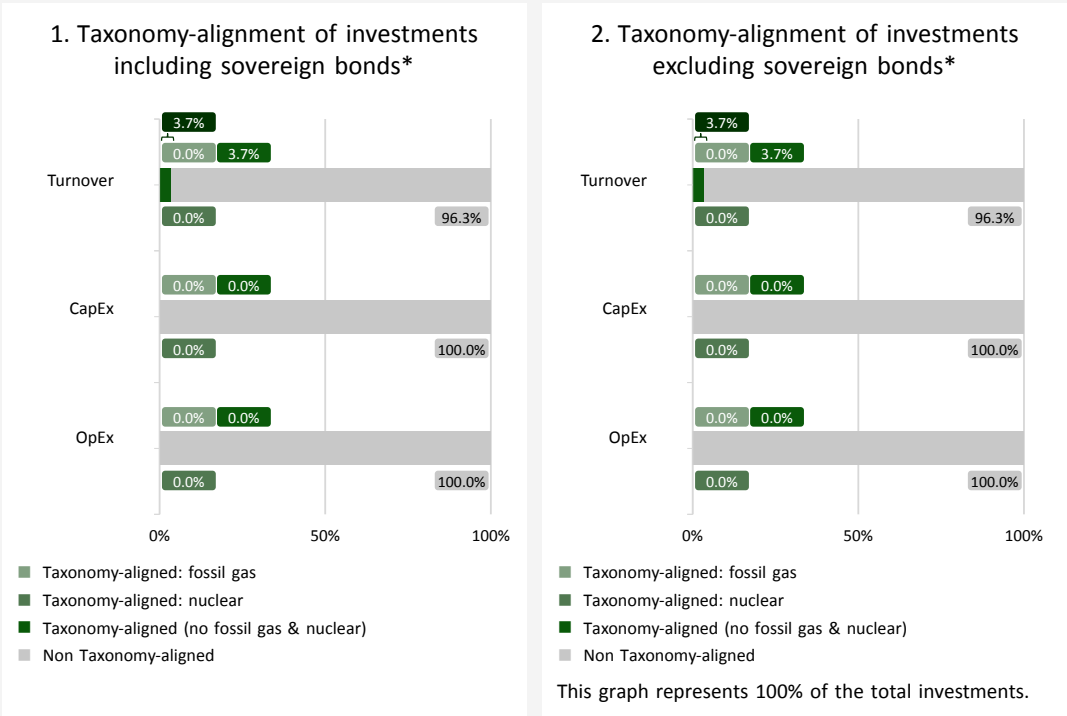

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Transitional activities: 0.24%

Enabling activities: 3.19%

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	2.99%
1 January 2023 - 31 December 2023	2.39%
1 January 2024 - 31 December 2024	3.68%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 29.05% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

A sustainable investment is considered to have an environmental objective aligned with the EU Taxonomy if the issuer's eligible activities reach a 10% threshold of alignment with EU Regulation 2020/852 (Taxonomy Regulation). If the issuer's eligible economic activities do not reach the 10% threshold of alignment with the Taxonomy Regulation or if the issuer's economic activities are not covered by the Taxonomy Regulation, DPAM has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives.

This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to environmental objectives.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 27.97% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education, peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.09% in liquid assets. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

Subsequently, on a semi-annual basis, the resulting universe was subject to a "best-in-class" ranking in order to retain only the best ESG profiles of companies on a list of securities eligible for management (25% of the lowest scores were removed from the eligible list by sector).

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN SDGs.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**

10. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES NEWGEMS SUSTAINABLE

10.1. MANAGEMENT REPORT

10.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 02/10/2006

Subscription price during this period: EUR 100.00

10.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

10.1.3. Aim and main outlines of the investment policy

Objective

The objective of the sub-fund is to offer investors exposure to equities and/or equity-equivalent securities issued by companies without geographical restriction and all securities giving access to the capital of such companies, which are selected on the basis of themes linked to the acronym NEWGEMS (Nanotechnology, Ecology, Wellness, Generation Z, E-society, Manufacturing 4.0, Security) (trends and themes of activities linked to nanotechnology, ecology, wellness, generation Z, E-Society, manufacturing 4.0 and security - see investment policy below). These companies are selected on the basis of a strict methodology for compliance with environmental, social and governance (ESG) criteria.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

No formal guarantee has been given either to the sub-fund or to its investors.

Investment policy

The sub-fund invests mainly in equities and/or equity-equivalent securities issued by companies "of the future" without geographical restriction, and in all securities giving access to the capital of such companies.

These companies "of the future" are identified by the acronym NEWGEMS (Nanotechnology, Ecology, Wellness, Generation Z, E-society, Manufacturing 4.0, Security) and include trends and themes of activities related to nanotechnology, ecology, wellness, generation Z, E-society, manufacturing 4.0 and security; activities that can be defined as follows (list is not exhaustive):

- **«Nanotechnology»:** Nanotechnology encompasses companies operating at a molecular level (the production of semiconductor equipment chips, medical diagnostics, life science tools and services, etc. which require complex miniaturisation) and the companies that make these advances possible.
- **«Ecology»:** Ecology includes companies whose activities relate to the environment and environmental protection such as Electrical Vehicles or clean energy.
- **«Wellness»:** Wellness includes any company whose activity involves human and animals health through, for example medical device or nutrition.

- **«Generation Z»:** Generation Z refers to the generation after the millennials. In this area, the manager will invest in companies that facilitate the lifestyle of this generation. Relevant examples are content (streaming or gaming), experience (travel) or fintech (payments).

- **«E-society»:** E-society includes any company that is engaged in e-commerce, supports digitalisation or cloud infrastructure.

- **«Manufacturing 4.0»:** Manufacturing 4.0 includes any company related to the new industrial revolution, or enterprise automation, such as robotics & automation, software-as-a service, the industry of things and artificial intelligence.

- **«Security»:** Security includes any company that relates to cybersecurity financial security and/or physical safety.

Stock-picking is based on economic and financial analyses and on a rigorous methodology of exclusions, integration of ESG factors, active shareholding and engagement with companies.

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities and in the form of undertakings for collective investment. The sub-fund invests a maximum of 10% of its assets in open-ended undertakings for collective investment.

The sub-fund may invest in units of another UCITS or another fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect holding of more than 10% of the capital or votes. No issue or redemption fees for target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

10.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: MSCI World Net Return.

This index is representative of the equity market for large and mid-cap stocks from 23 developed countries (as defined by MSCI and mainly based on the country of incorporation and the country of primary listing of its securities) around the world.

The performance of this index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance.

The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the sub-fund. Please refer to the investment strategy in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The possible composition and the value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

10.1.5. Policy followed during the year

At the end of December 2024, the net asset value of DPAM B Equities NewGems Sustainable (F share) amounted to EUR 371.88. This represents a 23.86% increase since the start of the year.

Over the past two years, we have strategically tilted the portfolio more towards large-cap stocks, particularly big tech and semiconductor companies. This decision has proven to be the right call. However, the fund still maintains a considerable mid-cap exposure, which has continued to weigh on performance during the year.

About two thirds of the return in 2024 can be attributed to the IT sector, despite having “only” a 44% average weight. Combined with non-IT names Netflix, Amazon and Alphabet, this explains almost 90% of the return. Meanwhile, our healthcare (a significant 20% of the fund) and industrial exposures did not contribute positively. In other words, the technology sector (driven by AI) performed well, while the rest did not.

Focusing on IT, semiconductors continued to outperform significantly compared to software, driven by a rotation into AI beneficiaries. Proven Winners Nvidia, TSMC performed exceptionally well. Recently added Future Winners Astera Labs and Marvell also rose substantially. Our semiconductor equipment exposure performed less well, due to worries on Intel, Samsung and China.

Within Software, cybersecurity investments generally performed strongly, as did cloud infrastructure monitoring names. Adding Palo Alto on an earnings disappointments was one of the best additions of the year. ServiceNow continues to perform in a league of its own. On the flipside, Adobe, Nice and Accenture lagged as investors weigh the disruption potential of AI. We’ve exited Accenture while adding Oracle, Salesforce and Workday.

We also fortified the portfolio with quality semi names like Analog Devices (anticipating a turn in the cycle) and Applied Materials, a semi-equipment powerhouse, at a reasonable valuation, while exiting Nordic Semi, BE Semiconductor Industries, and Monolithic Power Systems, primarily on valuation grounds, which proved to be good decisions.

In healthcare, a few stocks, such as Dexcom, Eurofins, RxSight and Paragon28, weighed heavily on performance for various reasons. Additionally, we added diabetes and weight loss drug maker Novo Nordisk, who dropped into the camp of underperformers after their next generation obesity drug read-out failed to live up to expectations. Positively, Doximity almost doubled on the back of a growth acceleration, while Intuitive Surgical rose upon high expectations for its latest Da Vinci robot. Most of the larger healthcare positions had only slight positive returns. Over the year, we’ve added Novo Nordisk, Vertex Pharma and RxSight, while exiting Tigermed, Doximity, Paragon28 and Dexcom.

Within Financials, we continue to focus on a combination of innovative Proven Winners, such as Progressive, Moody’s, Visa or London Stock Exchange, which had excellent performances, while being more decorrelated to the rest of the investments. Future Winner Wise also rallied towards the end of the year as multiple large financial players embraced their solution. We exited Beazley, Paypal and Finecobank during the year.

Within the industrial sector, again mid-caps like IMCD and Spirax-Sarco, experienced a strong derating. Uber also derated materially, as fears about autonomous driving put their business model into question. We added Inpost, a parcel deliver company, to the strategy while successfully exiting the solar energy company Shoals and Tomra.

Lastly, within consumer, Booking did very well, much like On Holdings, which we exited on valuation grounds. Airbnb and Lululemon experience more difficult times and derated significantly. We have exited Lululemon. Within staples, both Bakkafrøst and Kerry performed reasonably well. We’ve exited Kerry for valuation reasons.

10.1.6. Future policy

We will not deviate from our strategy to invest in innovative companies. We have therefore identified 7 major themes we invest in: Nanotechnology, Ecology, Wellness, Generation Z, E-Society, Manufacturing 4.0 and Security. These themes collectively form our name, NEWGEMS. With any investment decision, we keep in mind a certain barbell approach between on the one hand, higher growth, relatively expensive and more risky names and on the other hand more mature growth, less expensive and relatively more defensive names. Additionally, we integrate sustainable ESG KPI's (related to each theme) into our investment process as we are convinced that ESG risks and opportunities should be an integral part of a fundamental process.

10.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 4 with the exception of class W USD: 5

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

10.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	373,063,768.61	616,772,099.25	989,835,867.86
Sales	373,391,048.45	495,372,995.19	868,764,043.64
Total 1	746,454,817.06	1,112,145,094.44	1,858,599,911.50
Subscriptions	248,302,287.14	299,611,062.14	547,913,349.28
Redemptions	197,820,686.32	204,699,770.71	402,520,457.03
Total 2	446,122,973.46	504,310,832.85	950,433,806.31
Reference average of the total net asset	1,521,581,796.98	1,711,798,863.84	1,617,210,049.18
Rotation Percentage	19.74%	35.51%	56.16%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

On the date of publication of this report, the net asset value per share is published on the following websites: <https://www.funds.dpaminvestments.com/funds.html> and www.beama.be. This information is also available at the counters of the financial services department.

10.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B

Annual return:

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark. The benchmark is used to compare performance.

DPAM B
EQUITIES NEWGEMS SUSTAINABLE

Table of historical benchmark performance (actuarial returns):

The sub-fund uses the following index as its benchmark: MSCI World Net Return

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year		
					Year	Value
MSCI World Net Return	26.60 % (in EUR)	9.71 % (in EUR)	12.98 % (in EUR)	11.67 % (in EUR)	02/10/2006	9.49 % (in EUR)

Fee sharing

As at 31 December 2024, 38.30% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

10.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

10.11.1. Gross dividends paid in the financial year

2019	class A 0.30 EUR
	class V 1.43 EUR
	class M 1.44 EUR
2020	class A 6.05 EUR
	class E 6.14 EUR
	class V 6.05 EUR
2021	class M 6.09 EUR
	class A 7.15 EUR
	class E 7.31 EUR
2022	class V 7.20 EUR
	class M 7.24 EUR
	class A 2.08 EUR
2023	class E 2.15 EUR
	class V 2.11 EUR
	class M 2.12 EUR
2023	class A 1.91 EUR
	class E 1.99 EUR
	class V 1.96 EUR
	class M 1.97 EUR

10.11.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

10.11.3. Investment restrictions and overruns

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The DPAM B Equities Newgems Sustainable fund takes the commitment to invest at least 25% of their assets in investments with an environmental objective according to the waterfall methodology. Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 17/05/2024 and 14/06/2024. On NAV date 17/05/2024, those assets represented 24.47% of the fund's NAV. The breach was closed after adapting the positions.

10.11.4. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

10.11.5. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes		<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No	
<input type="checkbox"/>	It made sustainable investments with an environmental objective: ____%	<input checked="" type="checkbox"/>	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 69.52% of sustainable investments
<input type="checkbox"/>	<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/>	<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/>	It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/>		<input type="checkbox"/>	It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

During the Reference Period, derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund were not used for the purpose of promoting environmental and/or social characteristics.

● How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. The Sub-fund had zero exposure to companies in the bottom 20% on more than two of its four main environmental, social or governance risks, specific to the company's activity and geographical scope.

For the thematic strategy, a Scorecard is used to assess the ESG profile, focusing on the 4 most material ESG risks for the issuer. The profile of an issuer will be considered insufficient on environmental, social and governance issues if it scores in the bottom 20% on more than two of the four most material risks identified.

- e. The average weighted greenhouse gas (GHG) emissions intensity of the Sub-fund was below the average weighted greenhouse gas (GHG) emissions intensity of the benchmark, calculated over a rolling 3-year period: 597.86 tCO₂e/mn revenue compared to 1231.55 tCO₂e/mn revenue (as at 31/12/2024).

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	98.25%	98.60%	98.48%
Sustainable Investment	89.46%	90.80%	69.52%
Other Environmental Investments	65.89%	74.00%	30.88%
Social	88.12%	16.79%	37.06%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	No exposure	No exposure	No exposure
Sustainability indicator e.	Sub-fund: 436.6 Benchmark: 1113.06	Sub-fund: 540.86 Benchmark: 1199.15	Sub-fund: 597.86 Benchmark: 1231.55

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments. The objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest in companies whose core business is the development of products and services that contribute to the achievement of the 17 environmental or social Sustainable Development Goals ("SDGs"), as defined by the United Nations (UN) (e.g. health products and services, education-related services, water saving and access solutions, energy efficiency solutions, digitalisation-enabling services, sustainable mobility services, etc.) via:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);
- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs; and
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to all the SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

For the Reference Period, the Sub-fund had 69.52% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 0.42% of the Sub-fund's portfolio contributed to the achievement of one or more of the environmental objectives defined by the EU;
- 30.88% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy through investments in companies aiming to make a net positive contribution to the environmental SDGs;
- 37.06% of the Sub-fund's portfolio contributed to the achievement of social objectives through investments in companies aiming to make a net positive contribution to the social SDGs; and
- 65.17% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to all the SDGs.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:

o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);

via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs. During the Reference Period, 65.17% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) The exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has excluded companies involved in thermal coal production for example, and thus has allowed for a better coverage of indicators such as biodiversity and greenhouse gas emissions.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) Similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) Similarly, social indicators have been included in the analysis of the ESG profile of companies and impact their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) Similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
MICROSOFT	Information and communication	7.59	United States of America
AMAZON COM	Wholesale and retail trade; repair of motor vehicles and motorcycles	6.17	United States of America
NVIDIA CORP.	Manufacturing	5.41	United States of America

What was the proportion of sustainability-related investments?

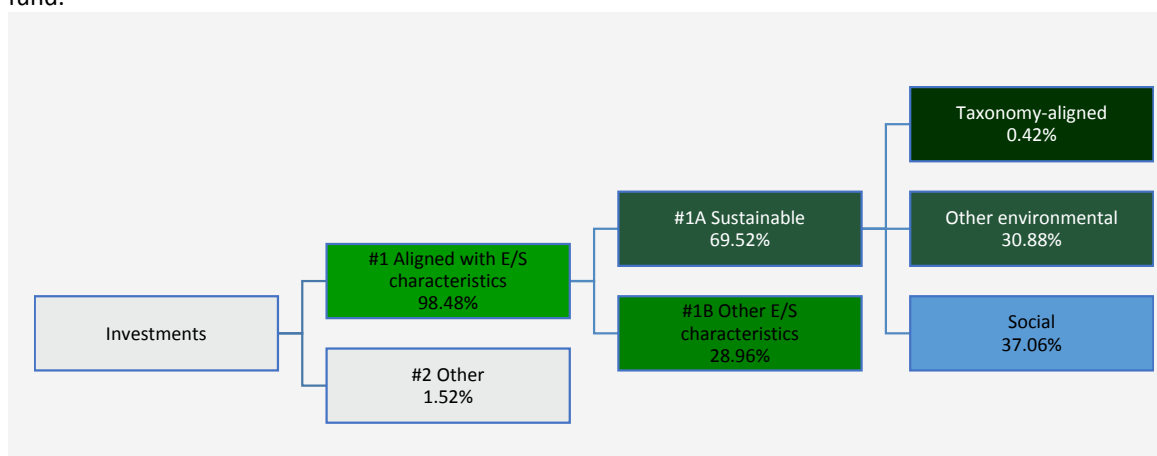

Asset allocation
describes the share of
investments in specific
assets.

● What was the asset allocation?

During the Reference Period, by applying the investment strategy, the Sub-fund invested a minimum of 98.48% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S characteristics”).

The Sub-fund invested at least 69.52% of its assets in sustainable investments with environmental or social objectives (in the table referred to as “#1A Sustainable”).

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Information and communication	Publishing activities	24.96
Manufacturing	Manufacture of computer, electronic and optical products	23.24
Information and communication	Information service activities	8.03
Wholesale and retail trade; repair of motor vehicles and motorcycles	Retail trade, except of motor vehicles and motorcycles	6.17
Administrative and support service activities	Office administrative, office support and other business support activities	5.81

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	5.02
Manufacturing	Manufacture of machinery and equipment n.e.c.	4.88
Manufacturing	Other manufacturing	4.50
Administrative and support service activities	Travel agency, tour operator reservation service and related activities	2.71
Information and communication	Computer programming, consultancy and related activities	2.40
Transportation and storage	Land transport and transport via pipelines	2.33
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	2.13
Information and communication	Telecommunications	1.82
Manufacturing	Manufacture of chemicals and chemical products	1.12
Professional, scientific and technical activities	Scientific research and development	0.87
Wholesale and retail trade; repair of motor vehicles and motorcycles	Wholesale trade, except of motor vehicles and motorcycles	0.84
Professional, scientific and technical activities	Architectural and engineering activities; technical testing and analysis	0.80
Professional, scientific and technical activities	Other professional, scientific and technical activities	0.46
Agriculture, forestry and fishing	Fishing and aquaculture	0.38
Liquid assets	Liquid assets	1.52

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 0.42% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 0.35% of investments contributed to climate change mitigation;
- 0.01% of investments contributed to climate change adaptation;
- 0% of investments contributed to the sustainable use and protection of water and marine resources,
- 0% of investments contributed to the transition to a circular economy;
- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Transitional activities: 0%
Enabling activities: 0.44%

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	0.82%
1 January 2023 - 31 December 2023	0.00%
1 January 2024 - 31 December 2024	0.42%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 30.88% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

A sustainable investment is considered to have an environmental objective aligned with the EU Taxonomy if the issuer's eligible activities reach a 10% threshold of alignment with EU Regulation 2020/852 (Taxonomy Regulation). If the issuer's eligible economic activities do not reach the 10% threshold of alignment with the Taxonomy Regulation or if the issuer's economic activities are not covered by the Taxonomy Regulation, DPAM has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives.

This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to environmental objectives.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 37.06% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education, peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.52% in liquid assets. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

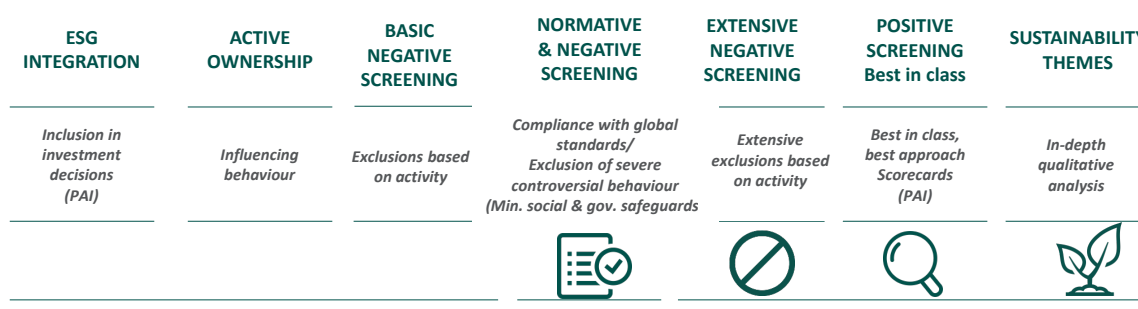

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

DPAM supplemented the various ESG exclusion filters using ESG risk and opportunities scorecards for each issuer in the portfolio. The scorecards were updated on an annual basis or ad hoc if an event should require a revision of the issuer's scorecard.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN Sustainable Development Goals. The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable

- **How did this financial product perform compared with the broad market index?**

Not applicable

11. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES SUSTAINABLE FOOD TRENDS
--

11.1. MANAGEMENT REPORT

11.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 17/12/2007

Subscription price during this period: EUR 100.00

11.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

11.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to provide investors with exposure to equities and/or equity-equivalent securities issued by companies that are active, directly or indirectly, in the food value chains in the broad sense of the term and in related or analogous sectors.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

This is an actively managed sub-fund.

No benchmark is used in the management of the sub-fund. Quantitative information from a broader market can be used for risk management and evaluation by the manager.

No formal guarantee has been given either to the sub-fund or to its investors.

Investment policy

The investments of this sub-fund mainly consist, without geographical limits, of shares or securities representing the share capital of companies that are active, directly or indirectly, in the agri-food value chains in the broad sense of the term and in related or analogous sectors. These agri-food value chains range from the production of food, including products and services that contribute to the production of food, to the sale of food products to the consumer. Companies whose activities such as storage, transport, packaging, processing etc., add value to food value chains, fall within the scope of the investment universe. Related sectors include, but are not limited to, plantations, storage, transport, packaging or agricultural businesses in general.

Stock-picking is based on economic and financial analyses and on a rigorous methodology of exclusions, integration of ESG factors, active shareholding and engagement with companies.

All other securities giving access to the capital of these companies shall be treated as equivalent to these investments.

The sub-fund invests at least two thirds of its total assets in these investments.

The sub-fund may also hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities.

The sub-fund invests a maximum of 10% of its assets in open-ended undertakings for collective investment.

The sub-fund may invest in units of another UCITS or another fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect holding of more than 10% of the capital or votes. No issue or redemption fees for target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

11.1.4. Index and benchmark

No benchmark is used in the management of the sub-fund.

11.1.5. Policy followed during the year

DPAM B Equities Sustainable Food Trends invest throughout the agriculture & food value chain with a minimum exposure of 60% of individual companies to the value chain. The fund invests in selected subthemes based on the macroeconomic and sector specific environment. Within specific value chains or subthemes a comparative ESG analysis is done complemented by individual scorecards.

During the year we exited positions in JDE Peet's (coffee price risk), McCormick (acquisition risk and valuation), Carbios (after delaying the construction of its first recycling plant), Sysco (muted growth in the restaurant industry), Sovos Brands (acquisition by Campbell Soup finalized) and Chr. Hansen (merger with Novozymes finalized).

We took new positions in Ajinomoto (restructuring potential in US operations and fermentation know-how), Vital Farms (high-growth egg producer with focus on sustainability), Sweetgreen (innovative quick service healthy restaurant chain) and Simply Good Foods (healthy protein snacks) while Novonesis entered the fund through the merger of Chr. Hansen and Novozymes.

Strongest performance contributions came from the consumer staples companies with notably United Plantations (benefitting from higher palm oil prices), Lotus Bakeries (continued double digit topline growth), Bakkafrøst (steady improvement in the Scottish salmon farming operations), Bellring Brands (well positioned as a producer of protein drinks), and MP Evans (as well supported by the palm oil price). Elsewhere, Deere posted a good performance despite continued industry headwinds as farmers continued to scale down on equipment purchases. Deere managed to compensate by cost reductions and lowering production to avoid high inventories and resulting price pressure. Although the year was quite volatile for Tomra, shares were up as new countries are expected to launch deposit return schemes in the near future which should benefit Tomra as global market leader. CF Industries continued to benefit from its input cost advantage (having access to cheap US natural gas while at the same time investing to decarbonize its ammonia production). Ingredient companies such as DSM-Firmenich, Corbion and Novonesis also recovered from a poor performance in 2023.

Negative contributors included Nutrien (pressure on potash prices), Carbios, AGCO (not as well positioned as Deere), Colruyt and Darling Ingredients (suffering from adverse impacts of renewable diesel certificates)

11.1.6. Future policy

Going forward we will continue to invest in companies that contribute to a fair, healthy and environmentally friendly food production. As such we will continue to invest along the whole value chain from inputs to the final food product.

11.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 4

11.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	1,290,249.90	2,268,606.56	3,558,856.46
Sales	15,000,368.93	19,199,529.27	34,199,898.20
Total 1	16,290,618.83	21,468,135.83	37,758,754.66
Subscriptions	3,099,751.31	1,830,254.62	4,930,005.93
Redemptions	19,044,332.29	20,203,160.26	39,247,492.55
Total 2	22,144,083.60	22,033,414.88	44,177,498.48
Reference average of the total net asset	94,370,660.24	80,738,155.46	87,517,160.57
Rotation Percentage	-6.20%	-0.70%	-7.33%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

On the date of publication of this report, the net asset value per share is published on the following websites: <https://www.funds.dpaminvestments.com/funds.html> and www.beama.be. This information is also available at the counters of the financial services department.

11.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Fee sharing

As at 31 December 2024, 33.15% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

11.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

11.11.1. Gross dividends paid in the financial year

2019	class A 1.06 EUR class V 2.28 EUR class M 2.20 EUR
2020	class A 1.69 EUR class E 1.70 EUR class V 1.83 EUR class M 1.70 EUR
2021	class A 2.55 EUR class E 2.75 EUR class V 2.85 EUR class M 2.58 EUR
2022	class M 0.33 EUR class E 0.50 EUR class V 0.48 EUR
2023	class M 2.01 EUR class E 2.01 EUR class V 2.10 EUR class A 1.97 EUR

11.11.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

11.11.3. Investment restrictions and overruns

Between NAV Dates 19/07/2024 and 22/07/2024 a legal passive breach was open in the DPAM B Equities Sustainable Food Trends subfund. Indeed, the sum of issuers representing more than 5% each represented more than 40% of the fund's TNA. The total weight attributed to 40.51%. The breach was caused by a price increase of 13.28% for TOMRA SYSTEMS ASA causing the weight to exceed 5% of the fund's TNA.

Between NAV Dates 27/08/2024 and 29/08/2024 a legal passive breach was open in the DPAM B Equities Sustainable Food Trends subfund. Indeed, the sum of issuers representing more than 5% each represented more than 40% of the fund's TNA. The total weight attributed to 40.603%. The breach was caused by a price increase of 3.52% for DARLING INGREDIENTS INC causing the weight to exceed 5% of the fund's TNA.

Between NAV Dates 18/10/2024 and 21/10/2024 a legal passive breach was open in the DPAM B Equities Sustainable Food Trends subfund. Indeed, the sum of issuers representing more than 5% each represented more than 40% of the fund's TNA. The total weight attributed to 42.248%. The breach was caused by a price increase of 2.98% for DARLING INGREDIENTS INC causing the weight to exceed 5% of the fund's TNA.

Between NAV Dates 29/10/2024 and 30/10/2024 a legal passive breach was open in the DPAM B Equities Sustainable Food Trends subfund. Indeed, the sum of issuers representing more than 5% each represented more than 40% of the fund's TNA. The total weight attributed to 41.768%. The breach was caused by market fluctuations.

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The DPAM B Equities Sustainable

Food Trends fund takes the commitment to invest at least 50% of their assets in investments with a social objective according to the waterfall methodology. Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 17/05/2024 and 31/12/2024. On NAV date 17/05/2024, those assets represented 24.02% of the fund's NAV. The breach was closed after an adaptation of the fund's prospectus.

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The DPAM B Equities Sustainable Food Trends fund takes the commitment to invest at least 50% of their assets in investments with a sustainable objective according to the waterfall methodology. Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 17/05/2024 and 14/06/2024. On NAV date 17/05/2024, those assets represented 42.39% of the fund's NAV. The breach was closed after adapting the positions.

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having a net positive contribution to individual SDGs. The DPAM B Equities Sustainable Food Trends fund takes the commitment to invest at least 25% of its assets in investments positively contributing to the SDG 2 (Zero Hunger). Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 06/05/2024 and 28/10/2024. On NAV date 06/05/2024, those assets represented 16.06% of the fund's NAV. The breach was closed after update of the data provider's data.

11.11.4. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

11.11.5. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes		<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No	
<input type="checkbox"/>	It made sustainable investments with an environmental objective: ____%	<input checked="" type="checkbox"/>	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 65.95% of sustainable investments
<input type="checkbox"/>	<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/>	<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

<input type="checkbox"/>		<input type="checkbox"/>	It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

During the Reference Period, derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund were not used for the purpose of promoting environmental and/or social characteristics.

● How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. The Sub-fund had zero exposure to companies in the bottom 20% on more than two of its four main environmental, social or governance risks, specific to the company's activity and geographical scope.

For the thematic strategy, a Scorecard was used to assess the ESG profile, focusing on the four most material ESG risks for the issuer. The profile of an issuer was considered insufficient on environmental, social and governance issues if it scores in the bottom quintile on more than two of the four most material risks identified;

- e. The average weighted greenhouse gas (GHG) emissions intensity of the Sub-fund was below the average weighted greenhouse gas (GHG) emissions intensity of the benchmark (DAX Agri [1]), calculated over a rolling 3-year period: 1399.29tCO₂e/mn revenue compared with 1533.81tCO₂e/mn revenue (as at 31/12/2024).

[1] The Dax Agri Index is an index of listed companies active in the agriculture and food value chain. The index includes securities across the entire value chain, with the majority concentrated in the upstream side. By sector, the materials side (fertilizer companies and agrochemical producers) represents around 31% while agricultural equipment companies are weighted at around 20%. Consumer stocks account for around 30%, complemented by companies in the healthcare, consumer discretionary and energy sectors. By country, the United States constitutes the major part (57%), followed by Germany, the United Kingdom, Singapore and Canada, whose combined weight represents around 25%, with the weight of the other countries being less than 5%.

● ...and compared to previous periods?

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	0.00%	96.12%	97.36%
Sustainable Investment	90.23%	76.20%	65.95%
Other Environmental Investments	0.00%	14.13%	25.72%
Social	87.69%	62.02%	40.23%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	No exposure	No exposure	No exposure
Sustainability indicator e.	Sub-fund: 1387.73 Benchmark: 1402.62	Sub-fund: 1363.3 Benchmark: 1376.12	Sub-fund: 1399.29 Benchmark: 1533.81

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

For the Reference Period, the objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest (a) in companies whose core business is aimed at more sustainable agriculture (including more sustainable food production and better preservation of land and biodiversity as well as the development of products, innovations and technologies aimed at promoting sustainable food consumption, facilitating the transition to healthy and sustainable diets and reducing food loss and waste) and/or (b) recognised green bonds or equivalent ("use-of-proceeds bonds") through:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);

- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs; and
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to the social SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

For the Reference Period, the Sub-fund had 65.95% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 0.01% of the Sub-fund's portfolio contributed to the achievement of one or more of the six environmental objectives defined by the EU.
- 25.72% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy through investments in companies aiming to make a net positive contribution to the environmental SDGs.
- 40.23% of the Sub-fund's portfolio contributed to the achievement of social objectives through investments in companies aiming to make a net positive contribution to the social SDGs.
- 46.19% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to the social SDGs.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:

o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);

via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to the social SDGs. During the Reference Period, 45.35% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) The exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has excluded companies involved in thermal coal production for example, and thus has allowed for a better coverage of indicators such as biodiversity and greenhouse gas emissions.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) Similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with DPAM's Controversial Activities Policy available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are

available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
CF INDUSTRIES HOLDINGS	Manufacturing	8.56	United States of America
DEERE & COMPANY	Manufacturing	8.50	United States of America
DSM-FIRMENICH LTD	Manufacturing	8.39	Netherlands
LOTUS BAKERIES	Manufacturing	6.12	Belgium
DARLING INGREDIENTS	Manufacturing	4.96	United States of America
BAKKAFROST	Agriculture, forestry and fishing	4.86	Norway
TOMRA SYSTEMS ASA	Manufacturing	4.58	Norway
COLRUYT	Wholesale and retail trade; repair of motor vehicles and motorcycles	4.02	Belgium
TATE & LYLE PLC	Manufacturing	3.92	United Kingdom
MARINE HARVEST ASA	Manufacturing	3.67	Norway
UNITED PLANTATIONS	Manufacturing	3.39	Malaysia

Largest investments	Sector	% Assets	Country
COMPASS GROUP PLC	Accommodation and food service activities	2.90	United Kingdom
ROBERTET SA	Manufacturing	2.70	France
KWS SAAT	Administrative and support service activities	2.61	Germany
BELLRING BRANDS INC	Manufacturing	2.52	United States of America

What was the proportion of sustainability-related investments?

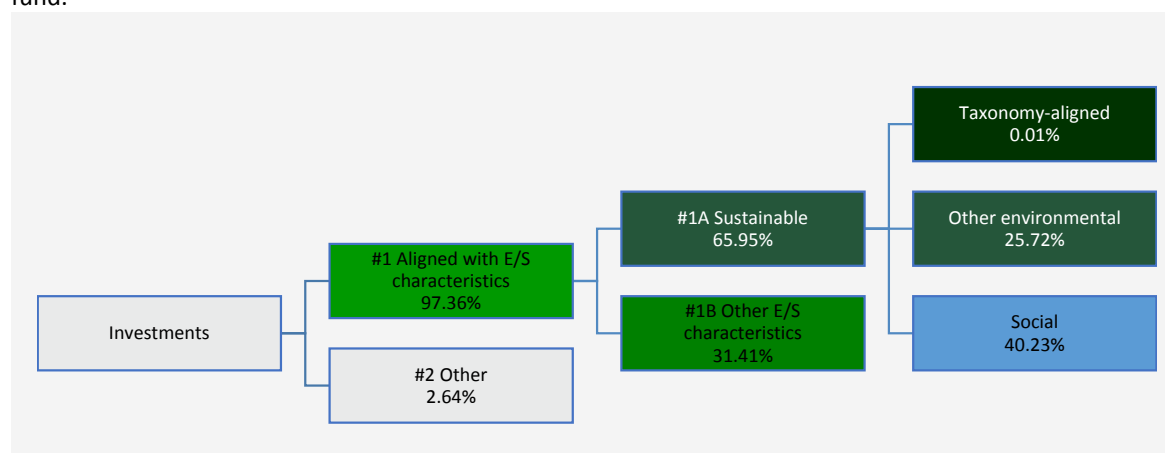

Asset allocation
describes the share of
investments in specific
assets.

What was the asset allocation?

By applying the investment strategy described above, the Sub-fund invests 97.36% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S characteristics").

The Sub-fund invested at least 65.95% of its assets in sustainable investments with environmental or social objectives (in the table referred to as "#1A Sustainable").

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of food products	33.16
Manufacturing	Manufacture of chemicals and chemical products	22.19
Manufacturing	Manufacture of machinery and equipment n.e.c.	14.88
Agriculture, forestry and fishing	Fishing and aquaculture	5.81

Sector	Sub-sector	% Assets
Wholesale and retail trade; repair of motor vehicles and motorcycles	Retail trade, except of motor vehicles and motorcycles	4.59
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.36
Accommodation and food service activities	Food and beverage service activities	4.27
Administrative and support service activities	Office administrative, office support and other business support activities	2.61
Agriculture, forestry and fishing	Crop and animal production, hunting and related service activities	2.59
Agriculture, forestry and fishing	Forestry and logging	2.25
Manufacturing	Manufacture of paper and paper products	0.66
Liquid assets	Liquid assets	2.64

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers.

The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 0.01% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 0.1% of investments contributed to climate change mitigation;
- 0% of investments contributed to climate change adaptation;
- 0% of investments contributed to the sustainable use and protection of water and marine resources,

- 0% of investments contributed to the transition to a circular economy;
- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

Transitional activities: 0%
Enabling activities: 0.1%

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	0.13%
1 January 2023 - 31 December 2023	0.05%
1 January 2024 - 31 December 2024	0.01%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 25.72% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

A sustainable investment is considered to have an environmental objective aligned with the EU Taxonomy if the issuer’s eligible activities reach a 10% threshold of alignment with EU Regulation 2020/852 (Taxonomy Regulation). If the issuer’s eligible economic activities do not reach the 10% threshold of alignment with the Taxonomy Regulation or if the issuer’s economic activities are not covered by the Taxonomy Regulation, DPAM has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives.

This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to environmental objectives.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections “Methodologies” and “Data Sources and Data Processing”).

Are sustainable investments with an environmental objective that do **not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 40.23% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education, peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 2.64% in liquid assets. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

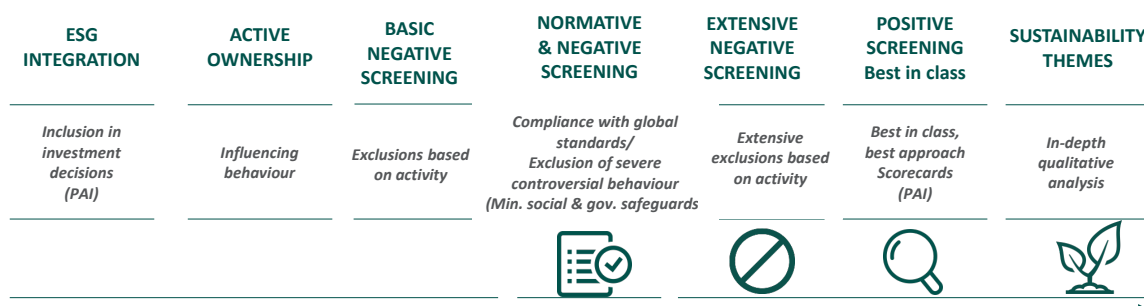

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

DPAM supplemented the various ESG exclusion filters using ESG risk and opportunities scorecards for each issuer in the portfolio. The scorecards were updated on an annual basis or ad hoc if an event should require a revision of the issuer's scorecard. From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, as part of its research into the impact and themes of sustainability, DPAM has ensured that the company's products and/or services have contributed – in proportion to its turnover – to attaining SDGs 2 (zero hunger) and 3 (good health and well-being).

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable
- **How did this financial product perform compared with the broad market index?**
Not applicable

**12. INFORMATION ABOUT THE SUBFUND DPAM B BONDS EUR
GOVERNMENT IG (FORMERLY DPAM B BONDS EUR IG)**

12.1. MANAGEMENT REPORT

12.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 30/06/2010

Subscription price during this period: EUR 50.00

12.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

12.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to offer shareholders exposure to the bond market.

The portfolio of the sub-fund consists essentially of short-, medium- and long-term instruments such as bonds and other debt securities or equivalent securities denominated in EUR, at fixed or floating rates, offering periodic or capitalized income and issued or guaranteed by Member States of the European Union.

The portfolio may also comprise government bonds (fixed-rate and variable-rate) issued by government agencies and by local authorities, government bonds denominated in a currency other than the country's local currency, and supranational agencies.

The issuers of the instruments in which the portfolio is invested must have a minimum rating corresponding to Investment grade* with each ratings agency (including Standards & Poor's, Moody's and Fitch) proposing the monitoring of the issuer.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

The sub-fund's shareholders do not benefit from any capital protection or guarantee.

* Investment Grade: is an interpretation of the rating of the bond issuer in terms of the financial risks. Rating agencies each use their own scale to evaluate the notion of risk. Investment grade ratings are situated between AAA and BBB according to the Standard & Poor's and Fitch scales and between Aaa and Baa3 according to the Moody's scale.

Investment policy

The sub-fund invests a maximum of 10% of its assets in open-ended undertakings for collective investment.

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities and in the form of undertakings for collective investment.

As a result of an exemption granted by the Autorité des Services et Marchés Financiers, the sub-fund may invest up to 100% of its assets in the various issues of transferable securities and money market instruments issued or guaranteed by a Member State of the European Economic Area which has adopted the euro as its currency (listed below(*)) and by its regional public bodies. These undertakings for collective investment must hold transferable

securities and money market instruments belonging to at least six different issues, and transferable securities and money market instruments belonging to a single issue must not exceed 30% of the total value of their assets.

(*) Belgium, Germany, Finland, France, Greece, Luxembourg, Ireland, Italy, Netherlands, Austria, Portugal, Spain, Slovenia, Cyprus, Malta, Slovakia, Estonia.

The sub-fund may invest in units of another UCITS or another fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect holding of more than 10% of the capital or votes. No issue or redemption fees for target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

12.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: JPM EMU Government Investment Grade Total Return.

This index is a bond index representing bonds issued by the governments of European countries where the euro is the official currency, rated "investment grade" by each of the three major rating agencies (Standard & Poor's, Moody's and Fitch). Performance is calculated by reinvesting the coupons paid by the debt securities making up the index.

J.P. Morgan Securities PLC is listed in the register held by ESMA (European Securities and Markets Authority)

The benchmark is used to compare performance.

The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the sub-fund. Please refer to the investment strategy in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The possible composition and the value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

12.1.5. Policy followed during the year

At the end of 2023, we were of the view that Europe was entering a recession, based on numerous red flags appearing across the European economy. However, 2024 turned out to be different, as against expectations, the European economy was able to stand its ground with low, but still positive real GDP growth. At the same time, though the year, inflation continued decreasing towards the ECB's target.

Consequently, based on our views, we held an overweight duration stance throughout the year. The interest rate on the German 10Y government bond started the year around 2% and ended the year higher at 2.40%.

We were however able to limit the negative contribution of our duration overweight by tactically increasing and decreasing duration based on an improved or diminished attractiveness of interest rates. More specifically, a 10Y German bund around 2% was becoming less attractive while a level around 2.50% appeared as clear value.

Additionally, as we believed the ECB should have cut more than it did, we were heavily positioned for a steepening of interest rate curves. Although they eventually did steepen more or less in line with expectations, it took longer than we expected.

Finally, as we stated last year, country allocations will become an even more important source of relative performance as the absence of the ECB in government bond markets makes country selection of the utmost

importance. As we have been able to pick the right countries at the right time, we were able to significantly profit from this. Especially our allocations towards France, Romania, Germany, and Slovakia have added significant relative performance.

12.1.6. Future policy

Although the downward move in European government bond yields has been postponed versus our expectations a year ago, this does not mean the more structural move down is cancelled.

As Europe continues to remain in a stagflationary environment, where real GDP growth is below potential and inflation relatively in line with target, the ECB will have to continue lowering its policy rate. Consequently, market interest rates should also continue moving lower.

Although we agree that a Trump policy might be inflationary, we believe the effects will be more felt from a US perspective. Depending on the actual mix of the Trump policies and the consequent reaction of European leaders, this can also have more or less important effects on Europe. Independent of the size of these effects, we believe they will be negative for both growth and inflation.

Tariffs will make it even more difficult for the European economy to grow through trade and will as such push real growth lower. But especially the significant increase in tariffs on Chinese goods will lead to a further dumping towards other markets. Europe will again be on the receiving end and will as such import Chinese deflation with negative effects on European inflation.

As has been the case since the end of the ECB's bond purchasing programs since 2022, country selection will remain an important driver of relative performance. This as markets will have to continue focusing on country fundamentals in the absence of the ECB as a price-insensitive buyer. Especially our allocation towards France will be an important one given our current significant underweight. Over the coming months we will have to reassess our position there from a carry perspective given current spread levels, and not from improving risk premia.

12.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 3

12.5. GEOGRAPHIC ALLOCATION OF INVESTMENTS

By country	% Portfolio
GERMANY (FEDERAL REPUBLIC)	18.49%
SPAIN	17.73%
ITALY	16.55%
FRANCE	9.30%
FINLAND	8.35%
AUSTRIA	7.77%
BELGIUM	5.09%
SLOVAKIA (SLOVAK REPUBLIC)	4.66%
IRELAND	3.54%
NETHERLANDS	3.31%
PORTUGAL	1.48%
CROATIA (REPUBLIC)	1.41%
LUXEMBOURG (GRAND DUCHY)	1.15%
ROMANIA	0.90%
POLAND (REPUBLIC)	0.27%
Total	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

12.6. ECONOMIC ALLOCATION OF INVESTMENTS

By sector	% Portfolio
STATES	92.90%
EUROPEAN ORGANIZATIONS	2.88%
PROVINCE	2.06%
BANKS	1.77%
FINANCIAL SERVICES - HOLDINGS	0.26%
ROAD VEHICLES	0.09%
COMMERCIAL & PUBLIC SERVICES	0.04%
TOTAL	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

12.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	55,589,283.50	69,654,694.00	125,243,977.50
Sales	36,828,102.10	77,968,194.21	114,796,296.31
Total 1	92,417,385.60	147,622,888.21	240,040,273.81
Subscriptions	36,202,908.44	59,592,551.01	95,795,459.45
Redemptions	19,638,241.92	66,076,214.67	85,714,456.59
Total 2	55,841,150.36	125,668,765.68	181,509,916.04
Reference average of the total net asset	198,480,543.07	198,465,599.17	198,473,030.29
Rotation Percentage	18.43%	11.06%	29.49%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

12.10. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Fee sharing

As at 31 December 2024, 0.69% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

12.12. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

12.12.1. Gross dividends paid in the financial year

2019	class A 0.65 EUR
	class M 0.68 EUR
2020	class A 0.62 EUR
	class M 0.74 EUR
2021	class A 0.80 EUR
	class M 0.81 EUR
2023	class A 1.13 EUR
	class M 1.14 EUR

12.12.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

12.12.3. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

12.12.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with a social objective </div> <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- excluding countries that do not respect a minimum of democratic requirements.
- by systematically applying a policy for impact bonds (such as green and social bonds).

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

● How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a. The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.
- b. The percentage of impact bonds ("Green, Social & Sustainability bonds") in the portfolio was higher than the benchmark. Over the Reference Period, the percentage of impact bonds ("Green, Social & Sustainability bonds") in the portfolio was 7.33% while the benchmark was 3.04%.

● ...and compared to previous periods?

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	95.39%	98.6%	97.77%

Reference period	2022	2023	2024
Failure to respect the democratic minimum	No exposure	No exposure	No exposure
Impact bonds	Sub-fund: 7.35% Benchmark: 0.73%	Sub-fund: 6.91% Benchmark: 2.52%	Sub-fund: 7.33% Benchmark: 3.04%

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund took into consideration the environmental and social PAIs listed in table 1 of appendix I of the Delegated Regulation (EU) 2022/1288, for investments in sovereign bonds.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that DPAM developed for its sovereign bond strategies. Consequently, it is included in the country’s sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries. The results of the country sustainability scores were discussed with the countries concerned according to DPAM’s Engagement Policy, which is available at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>.

The second PAI relates to social issues and focuses on issues of social breaches. Countries that have not met the minimum democratic requirements have been excluded. The country’s sustainability model observes several indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to major labour conventions, the

issue of equal opportunity and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other issuing countries.

During the Reference Period, a dialogue was initiated on the results of the sustainability scores with some countries according to DPAM's Engagement Policy (accessible via the link <https://www.dpaminvestments.com/documents/engagement-policy-enBE>).

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

● What was the asset allocation?

Through the application of the investment strategy described above, the Sub-fund has invested 97.77% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% Assets
Public administration	Public administration and defence; compulsory social security	92.83
Activities of extraterritorial organisations and bodies	Activities of extraterritorial organisations and bodies	2.83
Financial and insurance activities	Financial service activities, except insurance and pension funding	2.02
Construction	Civil engineering	0.09
Derivatives	Derivatives	-0,01
Liquidity	Liquidity	2.24

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☐ No

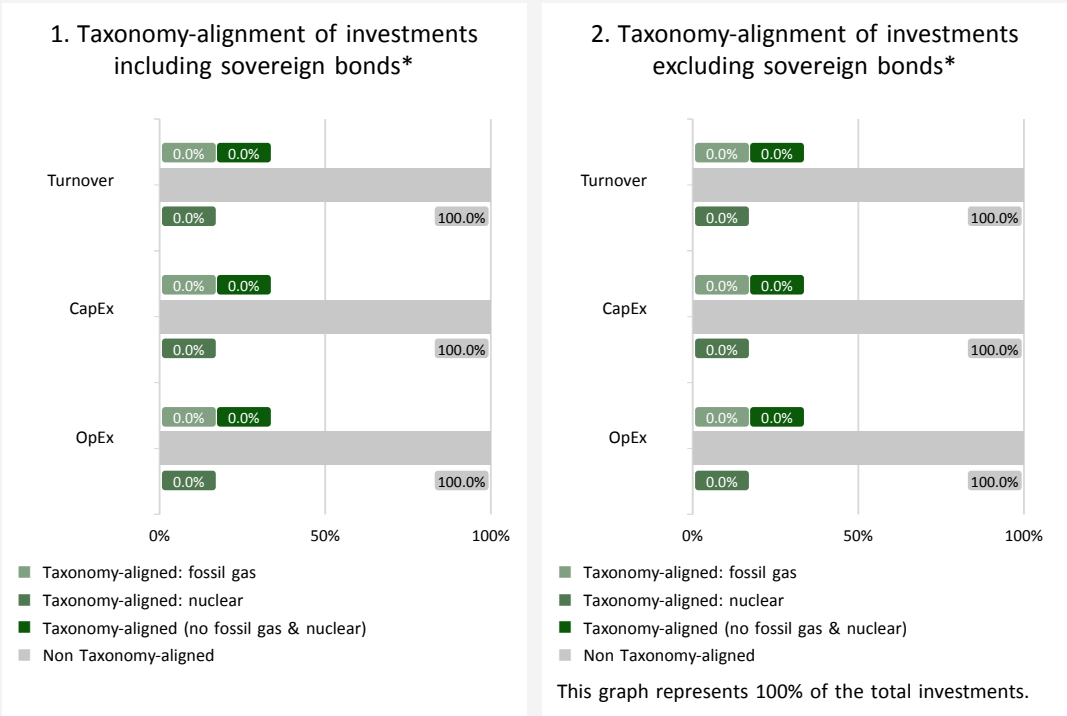

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

● What was the share of investments made in transitional and enabling activities?

Not applicable

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

Are sustainable investments with an environmental objective that **do not take into account the criteria** for

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

Over the Reference Period, for the purposes of achieving its investment objectives, portfolio diversification, liquidity management and/or risk hedging, the Sub-fund was exposed to 2.24% in liquid assets and -0.01% in derivatives. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime"). The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**

13. INFORMATION ABOUT THE SUBFUND DPAM B REAL ESTATE EUROPE DIVIDEND SUSTAINABLE

13.1. MANAGEMENT REPORT

13.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 28/12/2010

Subscription price during this period: EUR 100.00

13.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

13.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to offer shareholders the highest long-term return through a balanced management policy by investing its assets in securities representing the real estate sector in the broad sense of the term in Europe, mainly with higher distributable income than the average of the investment universe. These securities include, but are not limited to, shares of Real Estate Investment Trusts (REITs), real estate certificates, real estate companies and companies active in the promotion and development of real estate, as well as shares of real estate debt investment companies, etc. These companies are selected on the basis of compliance with environmental, social and governance (ESG) criteria.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

50% of the net assets must be composed of securities with a prospective yield over 3 years higher than the average of the investment universe.

The average is defined as being the dividend yield of the FTSE EPRA/NAREIT Developed Europe index.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

No formal guarantee has been given either to the sub-fund or to its investors.

Investment policy

The sub-fund may invest in units of another UCITS or another fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect holding of more than 10% of the capital or votes. No issue or redemption fees for target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

13.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: FTSE EPRA/NAREIT Developed Europe Net Return

This index is representative of the market for listed real estate companies in developed countries (as defined in the index methodology) in Europe. The performance of this index is calculated by reinvesting net dividends (Net Return).

FTSE International Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance and to select a large proportion of the securities in the portfolio. The return and risk profile of the sub-fund may be aligned with that of the benchmark, as the sub-fund invests mainly in the same securities as those of the benchmark. This could result in a tracking error of less than 3%.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the sub-fund. Please refer to the investment strategy in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The possible composition and the value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

13.1.5. Policy followed during the year

2024 was marked by high volatility in interest rates, with macroeconomic and geopolitical factors significantly influencing the fund's strategy. The year began on a negative note with rising long-term interest rates. However, from June to December, the Euro 5-year swap rate decreased by nearly 1%, aiding market recovery. The second half of the year experienced heightened political tensions in France and Germany, the election of Mr. Trump in the US, and the extension of conflicts in Ukraine and Israel.

In the physical real estate market, property values continued to decline, though this was partly cushioned by rising rent levels and the decline was materially lower than in 2023. Many properties have reached their trough valuation points towards the end of 2024. Depending on the type and size of assets, the investment market began to reopen slowly but steadily.

In the listed space, property companies continued their deleveraging strategies through asset disposals, dividend cuts, or equity injections.

The growth prospects in the US following Trump's election, coupled with renewed fear of higher inflation and higher interest rates and with European political tensions and conflicts, led investors to shy away from some European stock markets. The year-end saw a sell-off across all listed real estate sub-sectors, bringing the total return of the European listed real estate sector to approximately -3.6% for the year.

In this macroeconomic context, the fund increased its exposure mainly to the residential and self-storage subsectors while reducing its exposure to bonds and offices.

13.1.6. Future policy

For 2025, the further expected downwards rate path of the European Central Bank and a normalized financing environment, which is also due to affordable credit spreads, should increase transaction volumes in the investment market. This should set clearance prices for assets between equity rich buyers and equity poor and motivated sellers leading to a normalized real estate market.

Our strategy moving forward will depend on the outlook for companies in this volatile environment. We will continue to maintain a balanced portfolio. On one hand, we will focus on companies with strong balance sheets, robust growth

prospects and a good earnings visibility. On the other hand, we will also consider companies that are currently challenged but have management teams capable of improving earnings and visibility. These companies trade at a significant discount, offering potential upside to their share prices.

The investment themes for the first half of 2025 are:

- Companies with strong balance sheets holding quality assets, as opposed to those with excessive leverage.
- Companies operating in subsectors with supply shortages and higher rents, rather than those with oversupply and lower rent growth.
- Companies with strong ESG profiles.
- Shares in companies that offer a higher dividend and lower beta compared to the benchmark of the fund.
- A focus on total return, combining sustainable dividends and capital appreciation from rental growth.
- Emphasis on long leases and quality tenants with competitive advantages to strengthen cash flows.
- In a highly volatile environment, capitalizing on excessive market movements by rebuilding positions in strong companies that have been excessively penalized, and vice versa.
- Companies that are clearly undervalued compared to industry peers

13.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 4

Total 2	64,871,499.36	104,443,369.45	169,314,868.81
Reference average of the total net asset	173,834,012.65	199,113,920.76	186,543,037.49
Rotation Percentage	-8.70%	-19.11%	-28.51%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

13.10. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Fee sharing

As at 31 December 2024, 30.67% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

13.12. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

13.12.1. Gross dividends paid in the financial year

2019	class A 2.36 EUR class E 4.63 EUR class V 3.89 EUR class M 3.84 EUR
2020	class E 1,15 EUR (Interim dividend)
2021	class A 5.31 EUR class E 4.09 EUR class V 5.68 EUR class M 5.37 EUR
2022	class A 5.27 EUR class E 6.24 EUR class V 5.5 EUR class M 5.37 EUR
2023	class A 3.84 EUR class E 4.59 EUR class V 4.04 EUR class M 3.94 EUR

13.12.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

13.12.3. Investment restrictions and overruns

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The DPAM B Real Estate Europe Dividend Sustainable fund takes the commitment to invest at least 20% of their assets in investments with a social objective according to the waterfall methodology. Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 17/05/2024 and 31/12/2024. On NAV date 17/05/2024, those assets represented 0% of the fund's NAV. The breach was closed after an adaptation of the fund's prospectus.

13.12.4. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

13.12.5. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:
DPAM B REAL ESTATE EUROPE DIVIDEND
SUSTAINABLE

Legal entity identifier:
5493007K2CAGW84OK191

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 95.71% of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

During the Reference Period, derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund were not used for the purpose of promoting environmental and/or social characteristics.

● How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. The Sub-fund has no exposure to issuers whose ESG score resulting from the manager's proprietary "scorecard ESG" rating model is below two out of five;
- e. As at 31 December 2024, the proportion of issuers with Science Based Targets initiative (SBTi) or equivalent in the Sub-fund's portfolio was 67.08% (by weight of portfolio assets). The target is to reach at least 50% by 2026.

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	96.60%	97.01%	96.67%
Sustainable Investment	84.62%	95.69%	95.71%
Other Environmental Investments	1.02%	8.48%	65.70%
Social	34.02%	27.93%	0.00%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	No exposure	No exposure	No exposure
Sustainability indicator e.	Sub-fund: 35.76	Sub-fund: 51.4	Sub-fund: 67.08

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments. The objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest (a) in companies whose core business is the development of products and services that contribute to the achievement of the 17 environmental or social Sustainable Development Goals ("SDGs"), as defined by the United Nations (UN) (e.g. health products and services, education-related services, water saving and access solutions, energy efficiency solutions, digitalisation-enabling services, sustainable mobility services, etc.) via:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);
- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs; and
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to all the SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

For the Reference Period, the Sub-fund had 95.71% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 15.39% of the Sub-fund's portfolio contributed to the achievement of one or more of the environmental objectives defined by the EU;
 - 65.7% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy through investments in companies aiming to make a net positive contribution to the environmental SDGs.
 - 0% of the Sub-fund's portfolio contributed to the achievement of social objectives through investments in companies aiming to make a net positive contribution to the social SDGs.
 - 95.71% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to all the SDGs.
- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:
 - o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);
 - via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).
- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs. During the Reference Period, 95.71% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines

on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
VONOVIA	Real estate activities	7.37	Germany
UNIBAIL-RODAMCO	Real estate activities	6.20	France
LEG IMMOBILIEN	Real estate activities	4.99	Germany
TAG TEGERNSEE IMMOBILIER	Real estate activities	4.42	Germany
CTP BV	Real estate activities	4.16	Netherlands
BRITISH LAND	Real estate activities	3.71	United Kingdom
RETAIL ESTATES SICAFI	Real estate activities	3.63	Belgium
MERLIN PROPERTIES SOCIMI SA	Real estate activities	3.20	Spain
COVIVIO	Real estate activities	2.95	France
ARGAN	Real estate activities	2.87	France
MERCIALYS	Real estate activities	2.85	France
AEDIFICA	Real estate activities	2.75	Belgium
SIRIUS REAL ESTATE LIMITED	Real estate activities	2.70	United Kingdom
XIOR STUDENT HOUSING	Accommodation and food service activities	2.61	Belgium
WAREHOUSES DE PAUW	Real estate activities	2.28	Belgium

What was the proportion of sustainability-related investments?

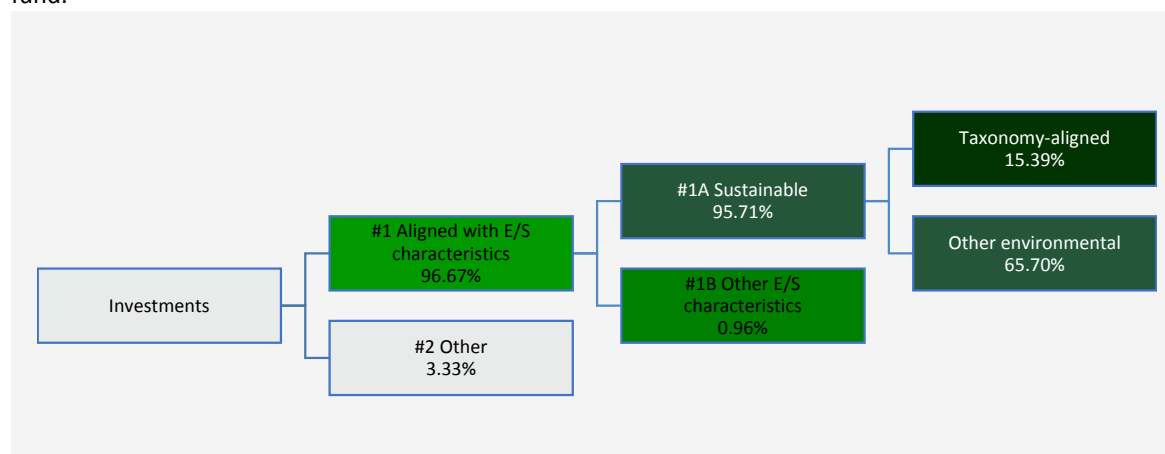

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

During the Reference Period, by applying the investment strategy, the Sub-fund invested a minimum of 96.67% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S characteristics”).

The Sub-fund invested at least 95.71% of its assets in sustainable investments with environmental or social objectives (in the table referred to as “#1A Sustainable”).

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Real estate activities	Real estate activities	91.26
Financial and insurance activities	Financial service activities, except insurance and pension funding	4.26
Accommodation and food service activities	Accommodation	2.61
Transportation and storage	Warehousing and support activities for transportation	0.58
Liquidity	Liquid assets	1.29

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.

- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 15.39% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 10.72% of investments contributed to climate change mitigation;
- 2.31% of investments contributed to climate change adaptation;
- 0% of investments contributed to the sustainable use and protection of water and marine resources,
- 0% of investments contributed to the transition to a circular economy;
- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

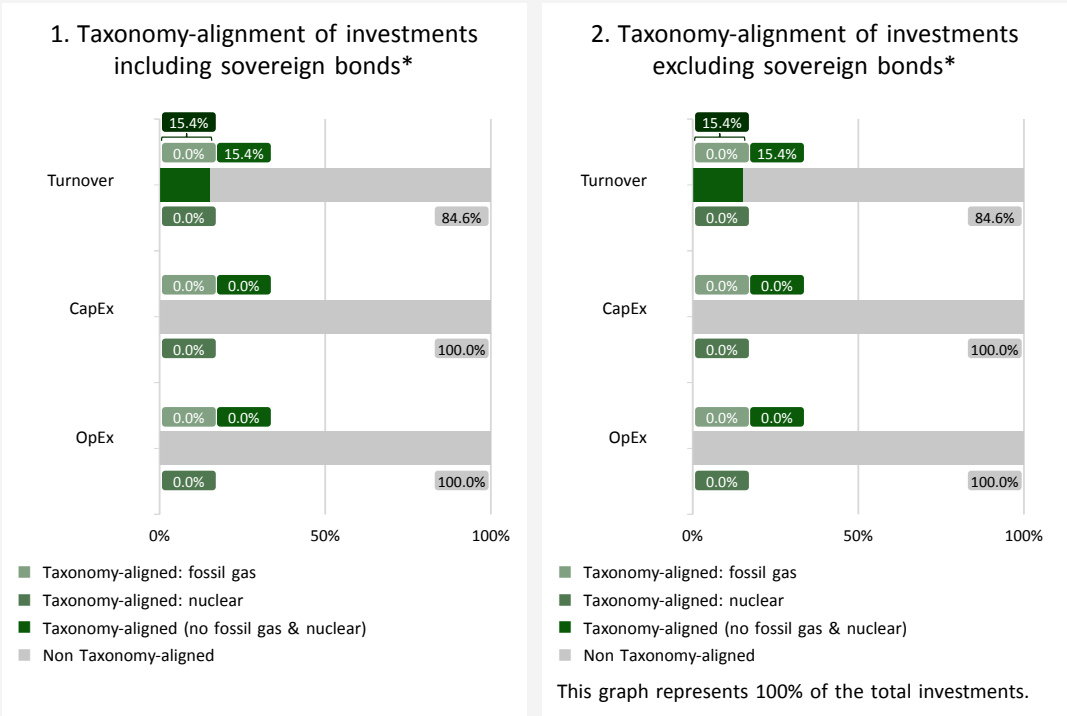

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Transitional activities: 0.04%
Enabling activities: 0.4%

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	16.78%
1 January 2023 - 31 December 2023	15.4%
1 January 2024 - 31 December 2024	15.39%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This Sub-fund does not seek to make sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. As at 31/12/2024, however, 65.7% is indicated in the section "What was the asset allocation".

Are sustainable investments with an environmental objective that do **not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 0% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education and peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- liquid assets
- derivative instruments
- collective investment schemes
- issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for the purposes of achieving its investment objectives, portfolio diversification, liquidity management and/or risk hedging, the Sub-fund was exposed to 1.29% in liquid assets and 2.04% in undertakings for collective investment. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

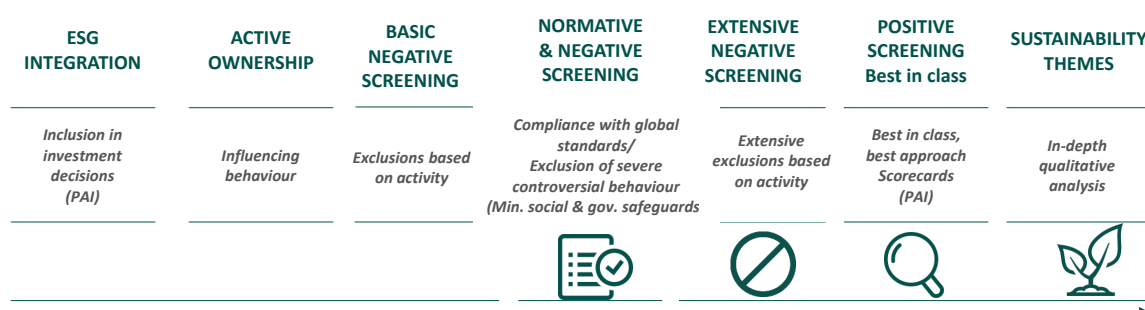

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

DPAM supplemented the various ESG exclusion filters using ESG risk and opportunities scorecards for each issuer in the portfolio. The scorecards were updated on an annual basis or ad hoc if an event should require a revision of the issuer's scorecard.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN SDGs.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable
- **How did this financial product perform compared with the broad market index?**
Not applicable

**14. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES
DRAGONS SUSTAINABLE**

14.1. MANAGEMENT REPORT

14.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: from 30/11/2020 to 15/12/2020

Subscription price during this period: EUR 100.00

14.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

14.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to offer investors exposure to equities and/or equity-equivalent securities issued by companies whose registered office is located in the Asia-Pacific region or which have a majority of their economic activities in the Asia-Pacific region*, and to all securities giving entitlement to the capital of these companies, selected on the basis of their compliance with environmental, social and governance (ESG) criteria.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

No formal guarantee has been given either to the sub-fund or to its investors.

*Asia-Pacific or APAC is the part of the world located in or near the Western Pacific Ocean. Asia-Pacific includes East Asia, South Asia, Southeast Asia and Oceania.

Investment policy

The sub-fund principally invests in the equities and/or other securities giving access to the equity capital so-called "companies of the future" located in the Asia-Pacific region.

Companies of the future are identified by the acronym DRAGONS (Disruptive Technology, Rising Middle Class, Ageing & Health, Generation Z, O² & Ecology, Nanotechnology, Security) for:

- Disruptive Technologies (artificial intelligence, robotics, computer-aided design software, etc.),
- Rising Middle Class (luxury, travel, retail chains, etc.),
- Ageing & Health (healthcare, healthy eating, animal health, etc.),
- Generation Z (social media, cell phones, game consoles, etc.),
- O² & Ecology (renewable energies, water management, energy efficiency, etc.),
- Nanotechnologies (biotech, advanced materials, semiconductors, etc.),
- Security (physical security, cyber-security, etc.).

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities and in the form of undertakings for collective investment. The sub-fund invests a maximum of 10% of its assets in open-ended undertakings for collective investment.

The sub-fund may invest in units of another UCITS or another fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect holding of more than 10% of the capital or votes. No issue or redemption fees for target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

14.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: MSCI AC Asia Pacific Net Return

This index is representative of the large and mid-cap equity markets of 5 developed countries and 9 emerging countries (as defined by MSCI and mainly based on the country of incorporation and the country of primary listing of its securities) in the Asia-Pacific region. The performance of this index is calculated in reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance.

The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the sub-fund. Please refer to the investment strategy in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The possible composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

14.1.5. Policy followed during the year

For the first three months of the year, the fund suffered from its lack of exposure to value stocks, which kept performing strongly. Especially cyclical industries did well, such as Automobiles and Energy, but also "value" financials, mainly in Japan and South Korea.

To address the situation, we conducted a strategic review in February and decided to modify our barbell approach. The main change happened at the "value" side of the barbell, where we switch focus from "proven winners" to "improvement and capital return stories". This change reflects our view that Asian markets overall are more competitive, making "mean reversion" patterns more prevalent. For cultural reasons, Asian people tend to work harder on their recovery during challenging periods, making a rebound more likely. Asian retail investors also have a more short-term, quarterly results-driven focus. This often leads to excessively high multiples when things go well, and excessively cheap multiples when businesses go through a challenging period. All those factors reward a value-contrarian approach with a long-term focus, where investors can benefit from a sustained rerating when businesses recover. On top of this, Japan and South Korea are currently running a "value-up" program, where the focus is on improving the profitability (return on equity) of lagging companies. As such, those countries want to improve their international competitiveness in attracting capital, while also creating a virtuous cycle where household savings are reinvested into the domestic stock market.

We managed to find attractive "improvement and capital return stories" that are a good match with our thematic and ESG-focused approach. Some are now key positions in our portfolio, such as Hitachi (a Japanese conglomerate refocusing its business on Green Energy and Digital Transformation) and SMFG (a leading Japanese bank benefiting from increasing interest rates in Japan, while also returning excess capital to shareholders and refocusing on growth opportunities across Asia).

At the same time, we did not forget the "growth" side of our barbell, where we added to companies like Sea (the "Amazon of South-East Asia"), Meituan (the "Uber Eats" of China) and Daiichi Sankyo (Japan's highest valued pharma company and a world leader in Antibody Drug Conjugates). As we remain confident on the AI theme and the

semiconductor market, we increased the weight of IT in our portfolio, by adding names such as SK Hynix (South Korea), Lotes (Taiwan) and Mediatek (Taiwan). Our overweight in healthcare has been reduced to a current “neutral” weight. While Aging and Health remains an important long-term theme, the sector is often in the crosshairs of geopolitics (e.g. the US Biosecure act), but also of domestic governments, who want to cut back on rapidly rising healthcare costs.

Fund performance has been good since the implementation of our new approach end March, as since then we outperformed our benchmark and many of our main competitors.

14.1.6. Future policy

We stay the course we are sailing since end March last year, as we remain confident that our current barbell approach is better suited for Asian markets. It furthermore allows us to pick up companies that we think are making the transition toward quality growth companies, and/or refocus their business on important themes, such as Hitachi.

Our base allocation by country is neutral, where we can slightly deviate based on the macro situation, valuations, and bottom-up opportunities. Currently our main underweights remain Australia and India, where we think valuations are excessive. We are close to neutral on China/Hong Kong and Japan, but are monitoring to increase our position. As we discussed extensively in our Factsheet comments and a dedicated article on the DPAM blog, we are convinced that China will ultimately do “what it takes” to avoid falling into a deflationary spiral. At the same time, it is increasingly producing companies that are global innovation and manufacturing leaders in their domain, especially in renewable energy and batteries (where we e.g. have CATL as a key position). We also take a more contrarian stance in focusing on companies that can benefit from a potential China macro recovery. As those companies are still at (very) cheap multiples, upside in case of a recovery is significant, while downside should be protected from the company’s quality relative to its peers and its high shareholder cash returns. Examples we hold in portfolio are JD.com, Alibaba, Midea Group and China Merchants Bank. While valuations for Japan are not as cheap as a year ago, its “value-up” story and exit from deflation is set to continue. This should lead to a continued rerating of companies that can do a successful turnaround, while higher average profitability should also improve long-term returns of the Japanese stock market overall.

Our biggest country overweights are in Taiwan and Indonesia. Our Taiwan overweight reflects our optimism on tech stocks, while for Indonesia, it is based both on a top-down (attractive growth market that is largely shielded from geopolitical risk) as a bottom-up and valuation perspective.

Sector-wise, our biggest overweight is in IT, where, after a correction in some semiconductor-related names over the past half year, we see strong long-term growth for reasonable valuations. It is also bottom-up driven, and we are vigilant to take profit on individual names when they get expensive. Our biggest sector underweights are Industrials, Real Estate, Materials and Energy (as companies in those sectors often do not match our ESG criteria or thematic approach).

14.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 4

14.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	59,709,942.02	6,334,630.80	66,044,572.82
Sales	263,723,578.18	17,810,388.76	281,533,966.94
Total 1	323,433,520.20	24,145,019.56	347,578,539.76
Subscriptions	2,054,447.39	442,557.60	2,497,004.99
Redemptions	204,986,265.61	11,543,145.64	216,529,411.25
Total 2	207,040,713.00	11,985,703.24	219,026,416.24
Reference average of the total net asset	107,009,274.23	31,230,742.13	68,912,963.01
Rotation Percentage	108.77%	38.93%	186.54%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

14.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Fee sharing

As at 31 December 2024, 40.57% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

14.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

14.11.1. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

14.11.2. Investment restrictions and overruns

Following clarifications by the ESA of 17th of November 2022 on the application of regulation (UE) 2019/2088, double counting should be avoided between an investment which has an environmental and social objective. Following this change of methodology, between NAV date 03/01/2024 and NAV date 16/05/2024, a breach was noticed in the DPAM B Equities Dragons Sustainable fund. Indeed, the fund take the commitment to be invested at least 20% in assets with a social investment objective. On NAV date 03/01/2024, the fund was at 18.23%. Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The breach was resolved after this switch of data provider.

14.11.3. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

14.11.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> Yes		<input checked="" type="radio"/> <input type="radio"/> No	
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____%	<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 56.92% of sustainable investments	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%		<input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments	

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

During the Reference Period, derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund were not used for the purpose of promoting environmental and/or social characteristics.

● How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. The Sub-fund had zero exposure to companies in the bottom 20% on more than two of its four main environmental, social or governance risks, specific to the company's activity and geographical scope and that, on this basis, there was no breach.
- e. The average weighted greenhouse gas (GHG) emissions intensity of the Sub-fund was below the average weighted greenhouse gas (GHG) emissions intensity of the benchmark, calculated over a rolling 3-year period: 873.13 tCO₂e/mn revenue compared to 1449.1 tCO₂e/mn revenue (as at 31/12/2024).

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	98.75%	98.99%	98.87%
Sustainable Investment	90.17%	90.12%	56.92%
Other Environmental Investments	61.14%	67.69%	24.96%
Social	8.82%	18.65%	26.72%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	No exposure	No exposure	No exposure
Sustainability indicator e.	Sub-fund: 800.42 Benchmark: 1382.38	Sub-fund: 502.1 Benchmark: 1330.62	Sub-fund: 873.13 Benchmark: 1499.1

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments. The objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest (a) in companies whose core business is the development of products and services that contribute to the achievement of the 17 environmental or social Sustainable Development Goals ("SDGs"), as defined by the United Nations (UN) (e.g. health products and services, education-related services, water saving and access solutions, energy efficiency solutions, digitalisation-enabling services, sustainable mobility services, etc.) via:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);
- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs; and
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to all the SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

For the Reference Period, the Sub-fund had 56.92% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 5.05% of the Sub-fund's portfolio contributed to the achievement of one or more of the environmental objectives defined by the EU;
- 24.96% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy through investments in companies aiming to make a net positive contribution to the environmental SDGs;
- 26.72% of the Sub-fund's portfolio contributed to the achievement of social objectives through investments in companies aiming to make a net positive contribution to the social SDGs; and
- 52.1% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to all the SDGs.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:

o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);

via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs. During the Reference Period, 52.1% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) Similarly, social indicators have been included in the analysis of the ESG profile of companies and impact their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines

on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) Similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
TAIWAN SEMICONDUCTOR MANUFACTURING	Manufacturing	8.76	Taiwan
SUMITOMO MITSUI FINANCIAL	Financial and insurance activities	3.14	Japan
HITACHI, LTD.	Manufacturing	2.79	Japan
ALIBABA GROUP HOLDING LTD	Wholesale and retail trade; repair of motor vehicles and motorcycles	2.22	China
AIA GROUP	Financial and insurance activities	2.22	Hong Kong
HOYA CORP	Manufacturing	2.02	Japan
PT BANK CENTRAL ASIA TBK	Financial and insurance activities	2.01	Indonesia
CONTEMPORARY AMPEREX TECHNOLOGY CO., LTD. CLASS A	Manufacturing	1.94	China
AJINOMOTO CO., INC.	Manufacturing	1.94	Japan
TOKIO MARINE HOLDINGS, INC.	Financial and insurance activities	1.93	Japan
MEITUAN DIANPING REGISTERED	Transportation and storage	1.88	China
CHINA MERCHANTS BANK CO., LTD. CLASS A	Financial and insurance activities	1.71	China
AXIS BANK LTD	Financial and insurance activities	1.69	India
NEC CORP.	Information and communication	1.62	Japan
OVERSEA-CHINESE BANKING CORPORATION	Financial and insurance activities	1.53	Singapore

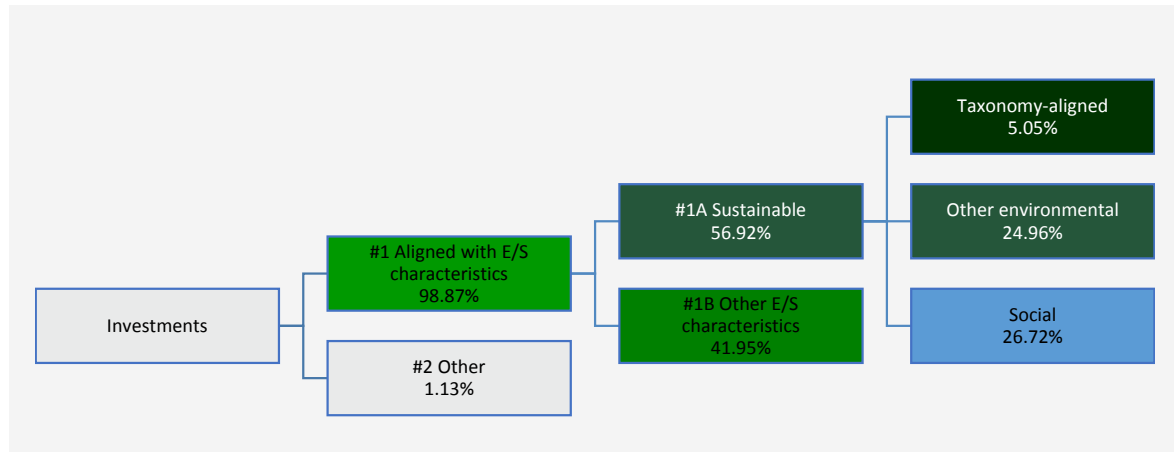

What was the proportion of sustainability-related investments?

What was the asset allocation?

During the Reference Period, by applying the investment strategy, the Sub-fund invested 98.87% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S characteristics”).

The Sub-fund invested at least 56.92% of its assets in sustainable investments with environmental or social objectives (in the table referred to as “#1A Sustainable”).

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of computer, electronic and optical products	20.45
Financial and insurance activities	Financial service activities, except insurance and pension funding	15.37
Manufacturing	Manufacture of machinery and equipment n.e.c.	7.89
Wholesale and retail trade; repair of motor vehicles and motorcycles	Retail trade, except of motor vehicles and motorcycles	5.48
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	5.23
Manufacturing	Other manufacturing	4.58
Information and communication	Computer programming, consultancy and related activities	4.45
Manufacturing	Manufacture of motor vehicles, trailers and semi-trailers	3.53

Sector	Sub-sector	% Assets
Information and communication	Publishing activities	3.48
Information and communication	Information service activities	3.39
Manufacturing	Manufacture of electrical equipment	2.90
Transportation and storage	Postal and courier activities	2.81
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.51
Information and communication	Telecommunications	2.30
Electricity, gas, steam and air conditioning supply	Electricity, gas, steam and air conditioning supply	2.21
Administrative and support service activities	Employment activities	2.05
Manufacturing	Manufacture of chemicals and chemical products	1.96
Manufacturing	Manufacture of food products	1.94
Construction	Civil engineering	1.41
Administrative and support service activities	Travel agency, tour operator reservation service and related activities	1.27
Manufacturing	Manufacture of leather and related products	1.00
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	0.94
Manufacturing	Manufacture of basic metals	0.91
Manufacturing	Manufacture of other transport equipment	0.84
Liquid assets	Liquidity	1.13

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 5.05% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 0% of investments contributed to climate change mitigation;
- 0% of investments contributed to climate change adaptation;
- 0% of investments contributed to the sustainable use and protection of water and marine resources,
- 0% of investments contributed to the transition to a circular economy;
- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

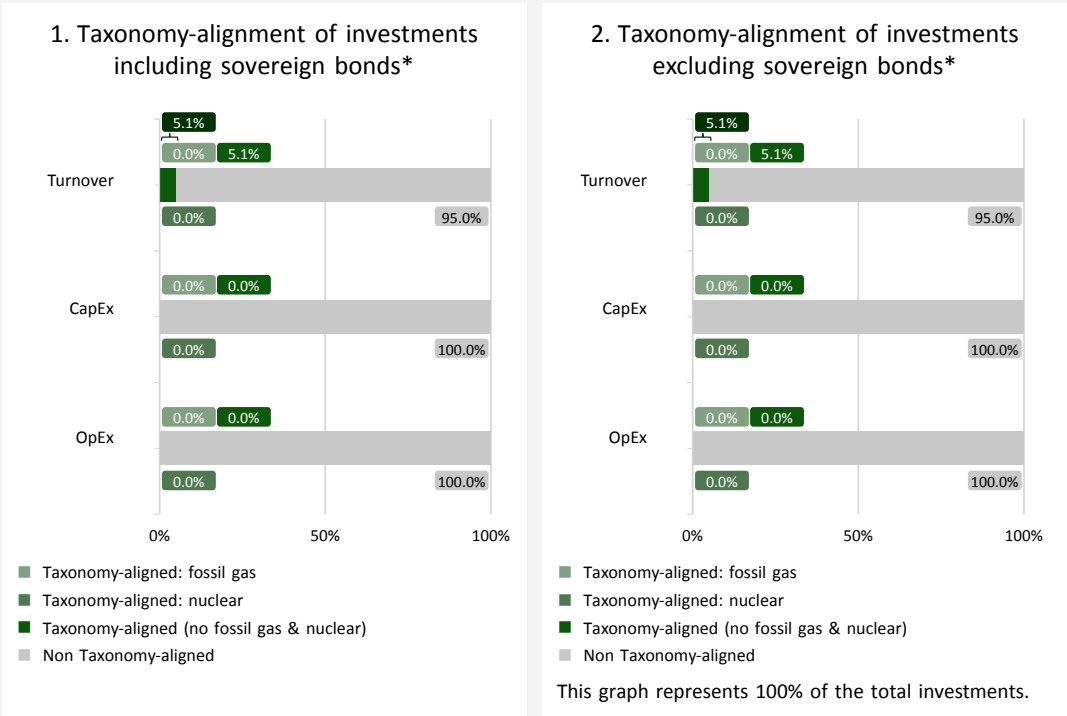

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Transitional activities: 0%
Enabling activities: 0%

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	0.82%
1 January 2023 - 31 December 2023	3.69%
1 January 2024 - 31 December 2024	5.05%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 24.96% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

A sustainable investment is considered to have an environmental objective aligned with the EU Taxonomy if the issuer's eligible activities reach a 10% threshold of alignment with EU Regulation 2020/852 (Taxonomy Regulation). If the issuer's eligible economic activities do not reach the 10% threshold of alignment with the Taxonomy Regulation or if the issuer's economic activities are not covered by the Taxonomy Regulation, DPAM has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives.

This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to environmental objectives.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 26.72% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education, peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.13% in liquid assets. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

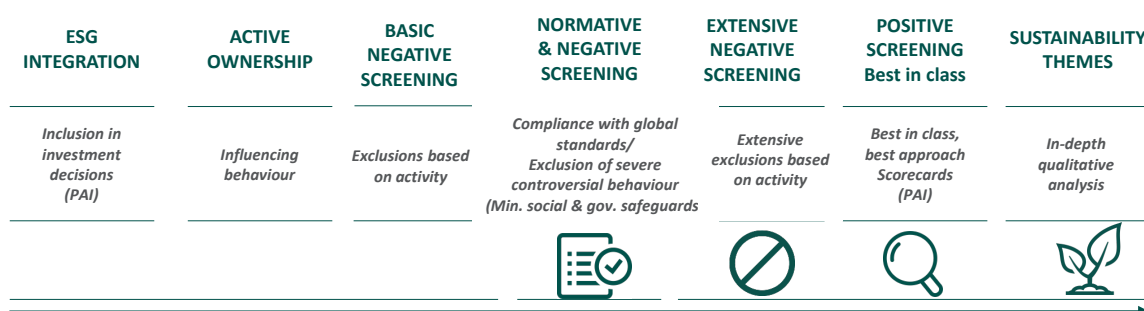

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

DPAM supplemented the various ESG exclusion filters using ESG risk and opportunities scorecards for each issuer in the portfolio. The scorecards were updated on an annual basis or ad hoc if an event should require a revision of the issuer's scorecard.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN SDGs. The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable
- **How did this financial product perform compared with the broad market index?**
Not applicable

**15. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES
EUROLAND SUSTAINABLE**

15.1. MANAGEMENT REPORT

15.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: from 30 November 2020 to 15 December 2020.

Subscription price during this period: EUR 100.00.

15.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

15.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to enable shareholders to benefit from the growth of shares of European companies or other equivalent securities having their registered office in one of the Member States of the European Union, which use the euro as their national currency and that are selected on the basis of environmental, social and governance (ESG) criteria.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

No formal guarantee has been given either to the sub-fund or to its investors.

Investment policy

To achieve the objective, the sub fund invests mainly in shares of European companies or other similar securities, having their registered office in one of the member states of the European Union, which use the euro as a national currency, and which meet certain environmental, social, and governance (ESG) criteria.

The following are considered to be equivalent companies: other companies that have a significant proportion of their assets, activities and profit or decision-making centres in the aforementioned countries.

More specifically, at least two-thirds of the sub-fund's investments are invested in stocks of companies which have their registered office or which carry out their primary economic activity in one of the European Union Member States which use the Euro as their national currency and any securities giving entitlement to the capital of these companies.

The sub-fund may also hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities. The sub fund invests up to 10% of its assets in open ended undertakings for collective investment.

The sub fund may invest in units of another UCITS or other fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect participation of more than 10% of the capital or votes. No issue or redemption fees of the target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

15.1.4. Index and benchmark

The sub-fund uses the following index as its benchmark: MSCI EMU Net Return.

This index is representative of the large- and mid-cap equity market of developed countries (as defined by MSCI and mainly based on the country of incorporation and the country of primary listing of its securities) in the EMU zone.

The performance of this index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance. The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the sub-fund. Please refer to the "Investment Strategy" section of the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The possible composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

15.1.5. Policy followed during the year

Thanks to a good start of the year, the sub-fund recorded a positive return in 2024. Sectors that contributed most positively to the performance were financials, IT and industrials. Sectors having a negative impact were consumer staples and utilities.

Within IT, software and IT services holdings were strong contributors as good execution from SAP and Reply resulted in significantly better results than peers.

In financials, both bank and insurance stocks performed well, with respectively Italian bank Intesa and German insurer Allianz standing out. The former continued to benefit from good profitability within the Italian retail banking environment while Allianz delivered good operational growth in a healthy price environment.

Consumer Staples had a negative contribution as emerging market consumer weakness weighted on sales growth of companies like L'Oréal and Beiersdorf. Finally, utilities holding EDP suffered from ongoing headwinds in the renewable energy market impacting its subsidiary EDPR.

During 2024, a few exits and new additions were made across both defensive and cyclical parts of the portfolio. Early in the year, within IT services, Alten was sold and proceeds were reinvested in Reply. The latter is more focused on integration of innovative software solutions rather than traditional outsourcing, allowing it to grow faster. A derating of the stock over the past two years allowed for a good entry point from a valuation point of view. In industrials, we initiated a position in Bureau Veritas, one of the global leaders of the testing, inspection, and certification market. After a period of organic growth slowdown, we believe this company will show a reacceleration of the growth, mostly driven by sustainability related services.

Notable additions during 2024: AIB Group, Bureau Veritas, Gerresheimer, Reply, Warehouses De Pauw

Notable dis-investments in 2024: Alten, Azelis, Cellnex, DHL Group, Sodexo

15.1.6. Future policy

US presidential elections have added a sense of urgency to Europe's reform agenda. The contrast between current "US exceptionalism" on the one hand and struggling manufacturers in Europe on the other hand is large. As such the potential for more forceful policy changes in 2025, for example in Germany, present an option for a more durable re-rating of European equities.

In the absence of concrete evidence of a new industrial plan however, investment in the region will likely remain hesitant.

Against this backdrop, our investment approach maintains a medium to longer time horizon. As a sustainable European equity fund, our aim is to lead in our category. We diligently uphold our ESG profile. Our focus centers on Eurozone companies with robust business models, deliberately steering clear of areas undergoing disruption.

15.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 5

With the exception of classes (F CHF HEDGED, F USD HEDGED) : 4

15.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	16,593,966.76	13,393,074.28	29,987,041.04
Sales	35,318,702.38	33,033,663.52	68,352,365.90
Total 1	51,912,669.14	46,426,737.80	98,339,406.94
Subscriptions	4,654,194.37	4,535,093.59	9,189,287.96
Redemptions	26,206,504.09	25,974,888.49	52,181,392.58
Total 2	30,860,698.46	30,509,982.08	61,370,680.54
Reference average of the total net asset	178,121,249.35	165,283,197.02	171,667,146.54
Rotation Percentage	11.82%	9.63%	21.54%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

15.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B

Annual return:

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark. The benchmark is used to compare performance.

Table of historical benchmark performance (actuarial returns):

The sub fund uses the following index as its benchmark: MSCI EMU Net Return

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
MSCI EMU Net Return	9.48 % (in EUR)	4.41 % (in EUR)			05/02/2021	7.92 % (in EUR)

Class A

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class A	8.82 % (in EUR)	0.65 % (in EUR)			05/02/2021	5.26 % (in EUR)

Class B

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class B	8.85 % (in EUR)	0.67 % (in EUR)			05/02/2021	5.31 % (in EUR)

Class F

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value

Class P

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class P	10.67 % (in EUR)	2.39 % (in EUR)			15/12/2020	7.61 % (in EUR)

15.10. CHARGES

Recurring costs

Class A - BE6324121126:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	1.84 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.13 %

Class B - BE6324122132:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	1.81 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.13 %

Class F - BE6324125168:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.94 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.13 %

Class P - BE6324133246:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.14 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.13 %

Fee sharing

As at 31 December 2024, 64.39% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

15.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

15.11.1. Gross dividends paid in the financial year

2021 class 0.49 EUR
2023 class A 1.41 EUR

15.11.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

15.11.3. Investment restrictions and overruns

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The DPAM B Equities Euroland Sustainable fund takes the commitment to invest at least 50% of their assets in investments with a sustainable objective according to the waterfall methodology. Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 17/05/2024 and 28/06/2024. On NAV date 17/05/2024, those assets represented 47.72% of the fund's NAV. The breach was closed after adapting the positions.

The DPAM B Equities Euroland Sustainable fund takes the commitment to invest at least 25% of its assets in investments with an environmental objective according to the waterfall methodology. On NAV date 10/06/2024, those assets represented 24.93%. The breach was closed thanks to market fluctuations.

15.11.4. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

15.11.5. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <div> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 63.08% of sustainable investments <div> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective </div> <input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

During the Reference Period, derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund were not used for the purpose of promoting environmental and/or social characteristics.

● How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. The Sub-fund had a better weighted average ESG profile than its benchmark, calculated over a rolling 3-year period: 68.51 compared to 67.12 (as at 31/12/2024).
- e. The average weighted greenhouse gas (GHG) emissions intensity of the Sub-fund was below the average weighted greenhouse gas (GHG) emissions intensity of the benchmark, calculated over a rolling 3-year period: 1117.81 tCO₂e/mn revenue compared to 1253.12 tCO₂e/mn revenue (as at 31/12/2024).

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	97.91%	97.51%	98.01%
Sustainable Investment	87.22%	88.15%	63.08%
Other Environmental Investments	53.92%	56.84%	37.93%
Social	83.28%	25.55%	17.54%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	Sub-fund: 61.7 Benchmark: 61.92	Sub-fund: 65.01 Benchmark: 64.08	Sub-fund: 68.51 Benchmark: 67.12
Sustainability indicator e.	Sub-fund: 688.61 Benchmark: 998.11	Sub-fund: 1045.24 Benchmark: 1198.62	Sub-fund: 1117.81 Benchmark: 1253.12

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments. The objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest in companies whose core business is the development of products and services that contribute to the achievement of the 17 environmental or social Sustainable Development Goals ("SDGs"), as defined by the United Nations (UN) (e.g. health products and services, education-related services, water saving and access solutions, energy efficiency solutions, digitalisation-enabling services, sustainable mobility services, etc.) via:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);
- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs; and
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to all the SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

For the Reference Period, the Sub-fund had 63.08% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 7.58% of the Sub-fund's portfolio contributed to the achievement of one or more of the environmental objectives defined by the EU;
- 37.93% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy through investments in companies aiming to make a net positive contribution to the environmental SDGs;
- 17.54% of the Sub-fund's portfolio contributed to the achievement of social objectives through investments in companies aiming to make a net positive contribution to the social SDGs; and
- 59.72% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to all the SDGs.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:

o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);

via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs. During the Reference Period, 59.72% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) The exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has excluded companies involved in thermal coal production for example, and thus has allowed for a better coverage of indicators such as biodiversity and greenhouse gas emissions.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines

on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

d) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
SAP AG	Information and communication	8.16	Germany
SCHNEIDER ELECTRIC	Manufacturing	7.65	France
ASML HOLDING	Manufacturing	6.58	Netherlands
AIR LIQUIDE (PORT)	Manufacturing	4.78	France
FERRARI NV	Manufacturing	3.92	Italy
IBERDROLA SA	Electricity, gas, steam and air conditioning supply	3.84	Spain
PIRELLI & C S.P.A.	Manufacturing	3.83	Italy
INTESA SANPAOLO (ORD)	Financial and insurance activities	3.69	Italy
ADIDAS NOM	Manufacturing	3.20	Germany
ASM INTERNATIONAL	Manufacturing	3.12	Netherlands
ALLIANZ (NOM)	Financial and insurance activities	3.09	Germany
BEIERSDORF	Manufacturing	2.51	Germany
ESSILOR	Manufacturing	2.46	France
L'OREAL SA	Manufacturing	2.31	France
DSM-FIRMENICH LTD	Manufacturing	2.22	Netherlands

What was the proportion of sustainability-related investments?

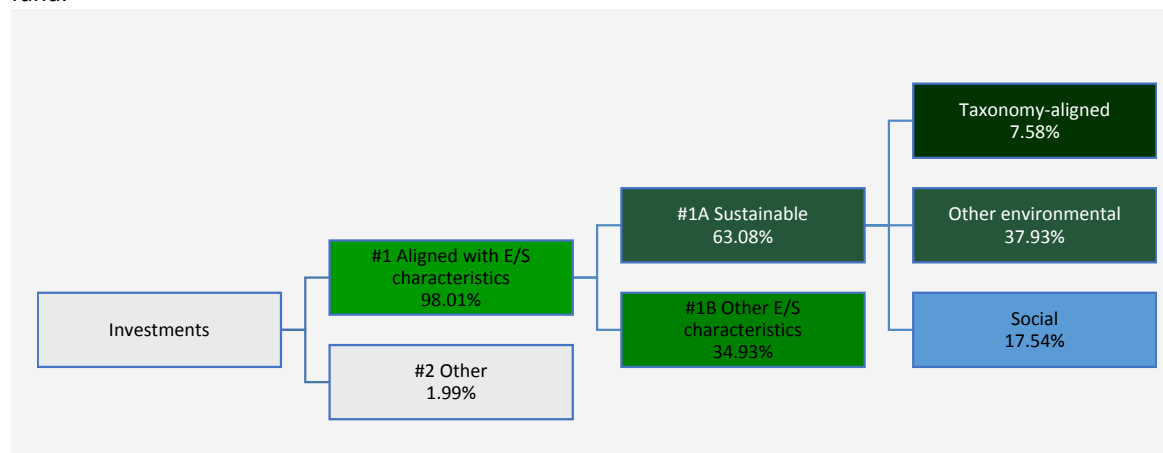

● What was the asset allocation?

By applying the investment strategy described above, the Sub-fund invests a minimum of 98.01% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S characteristics”).

Asset allocation describes the share of investments in specific assets.

The Sub-fund invested at least 63.08% of its assets in sustainable investments with environmental or social objectives (in the table referred to as “#1A Sustainable”).

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of chemicals and chemical products	11.82
Financial and insurance activities	Financial service activities, except insurance and pension funding	10.21

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 7.58% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 8.2% of investments contributed to climate change mitigation;
- 0% of investments contributed to climate change adaptation;

- 0% of investments contributed to the sustainable use and protection of water and marine resources,
- 0.31% of investments contributed to the transition to a circular economy;
- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

Transitional activities: 0.02%
Enabling activities: 7.68%

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	4.16%
1 January 2023 - 31 December 2023	5.20%
1 January 2024 - 31 December 2024	7.58%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 37.93% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

A sustainable investment is considered to have an environmental objective aligned with the EU Taxonomy if the issuer’s eligible activities reach a 10% threshold of alignment with EU Regulation 2020/852 (Taxonomy Regulation). If the issuer’s eligible economic activities do not reach the 10% threshold of alignment with the Taxonomy Regulation or if the issuer’s economic activities are not covered by the Taxonomy Regulation, DPAM has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives.

This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to environmental objectives.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections “Methodologies” and “Data Sources and Data Processing”).

Are sustainable investments with an environmental objective that do **not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 17.54% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education, peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.99% in liquid assets. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

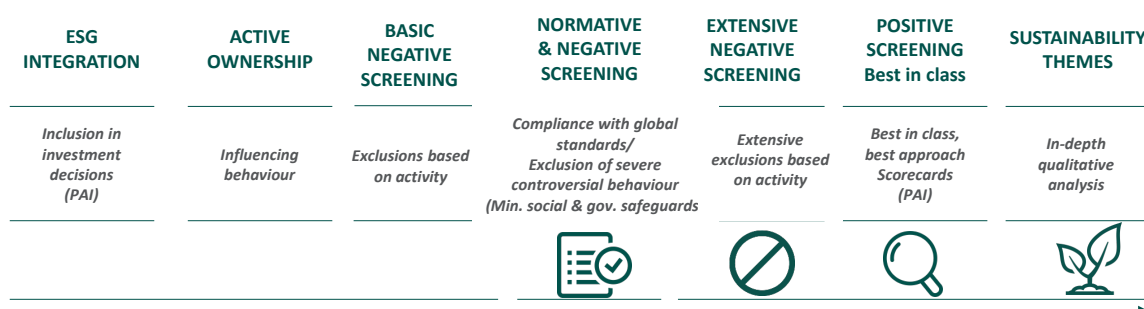

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

Subsequently, on a semi-annual basis, the resulting universe was subject to a "best-in-class" ranking in order to retain only the best ESG profiles of companies on a list of securities eligible for management (10% of the lowest scores were removed from the eligible list by sector).

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN SDGs.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable
- **How did this financial product perform compared with the broad market index?**
Not applicable

**16. INFORMATION ABOUT THE SUBFUND DPAM B BONDS EUR
CORPORATE SUSTAINABLE**

16.1. MANAGEMENT REPORT

16.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 16 August 2021.

Subscription price during this period: EUR 100.00.

16.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

16.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to offer shareholders exposure to debt securities denominated in euros with at least an investment grade rating*. These securities are selected on the basis of a strict methodology for compliance with environmental, social and governance (ESG) criteria.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

The sub-fund's shareholders do not benefit from any capital protection or guarantee.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

* Investment Grade: is an interpretation in terms of financial risk of the quality of the bond's issuer. The rating agencies each use their own scale to assess the notion of risk. Investment grade ratings are between AAA and BBB- on the Standard & Poor's and Fitch scale and between Aaa and Baa3 on the Moody's scale.

Investment policy

The sub-fund invests mainly in bonds and/or other debt securities (including, but not limited to, perpetual bonds and zero-coupon bonds), at a fixed or floating rate, denominated in euro, issued by companies and benefiting (or, failing that, their issuers) from an investment grade rating.

Stock-picking is based on economic and financial analyses and on a rigorous methodology of exclusions, integration of ESG factors, active shareholding and engagement with companies.

The sub-fund invests a maximum of 10% of its assets in open-ended undertakings for collective investment.

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits or securities and in the form of undertakings for collective investment.

The sub-fund may invest in units of another UCITS or another fund managed directly or indirectly by DPAM or by a company with which DPAM is linked by common management or control or by a direct or indirect holding of more than 10% of the capital or votes. No issue or redemption fees for target funds or management fees may be debited from the SICAV's assets where such investments have been made.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of Regulation SFDR 2019/2088.

16.1.4. Index and benchmark

The sub-fund uses the following index as its benchmark: iBoxx Euro Corporate Bond All Maturities index.

This index reflects the market performance of bonds denominated in EUR and issued by companies with an investment grade rating. The performance of the index is calculated by reinvesting gross coupons (Total Return index).

IHS Markit Benchmark Administration Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance. The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the promotion of the sub-fund's environmental and social characteristics. Please refer to the "Investment Strategy" section in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The possible composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

16.1.5. Policy followed during the year

Credit spreads performed well over the past year, with high volatility rates. Since the beginning of the year, the net asset value of capitalization equities has risen by 4.32%, outperforming the € iBoxx All Maturities Corporate Bond index, which rose by 4.56%. Over the course of the year, we selectively participated in new issues, giving preference to defensive and A-rated securities.

16.1.6. Future policy

Current credit break-even spreads provide a high buffer against further weakness.

We still advocate that corporate bonds with strong balance sheets can go through this period of turbulence. Selectivity and credit selection are key here since that the recovery is likely to be uneven across and within sectors. Our internal credit analysis is essential and will remain the cornerstone of the investment process so that the fund can best withstand episodes of strong volatility.

16.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 3

16.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	31,700,051.50	9,021,815.20	40,721,866.70
Sales	30,865,532.80	6,566,982.55	37,432,515.35
Total 1	62,565,584.30	15,588,797.75	78,154,382.05
Subscriptions	100.00	-100.00	0.00
Redemptions	0.00	0.00	0.00
Total 2	100.00	-100.00	0.00
Reference average of the total net asset	100,894,337.22	104,881,082.87	102,898,602.79
Rotation Percentage	62.01%	14.86%	75.95%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

16.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B

Annual return:

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark. The benchmark is used to compare performance.

16.10. CHARGES

Recurring costs

Class A - BE6328642713:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.74 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.02 %

Class B - BE6328643729:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.74 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.02 %

Class F - BE6328645740:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.38 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.02 %

Fee sharing

As at 31 December 2024, 43.96% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

16.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

16.11.1. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

16.11.2. Investment restrictions and overruns

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The DPAM B Bonds EUR Corporates Sustainable fund takes the commitment to invest at least 15% of their assets in investments with a social objective according to the waterfall methodology. Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 12/01/2024 and 31/12/2024. On NAV date 12/01/2024, those assets represented 14.77% of the fund's NAV. The breach was closed after an adaptation of the fund's prospectus.

16.11.3. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

16.11.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

Product name:
DPAM B BONDS EUR CORPORATE SUSTAINABLE

Legal entity identifier:
549300LC2YTG9CBTQK47

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes		<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No	
<input type="checkbox"/>	It made sustainable investments with an environmental objective: ____%	<input checked="" type="checkbox"/>	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 81.96% of sustainable investments
<input type="checkbox"/>	<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/>	<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/>	It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/>		<input type="checkbox"/>	It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

During the Reference Period, derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund were not used for the purpose of promoting environmental and/or social characteristics.

● How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. During the Reference Period, the proportion of issuers adopting Science Based Targets initiative (SBTi) objectives in the Sub-fund's (corporate) credit portfolio was higher than the benchmark, at 86.45% compared with 67.4%;
- e. During the Reference Period, the Sub-fund had a better weighted average ESG profile than its benchmark: 64.73 compared to 63.02 (as at 31/12/2024).

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments. The objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest in (a) companies whose core business is the development of products and services that contribute to the achievement of the 17 environmental or social Sustainable Development Goals ("SDGs"), as defined by the United Nations (UN) (e.g. health products and services, education-related services, water saving and access solutions, energy efficiency solutions, digitalisation-enabling services, sustainable mobility services, etc.) via:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);
- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs; and
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to all the SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

For the Reference Period, the Sub-fund had 81.96% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 8.82% of the Sub-fund's portfolio contributed to the achievement of one or more of the environmental objectives defined by the EU;
- 58.42% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy through investments in companies aiming to make a net positive contribution to the environmental SDGs;
- 10.7% of the Sub-fund's portfolio contributed to the achievement of social objectives through investments in companies aiming to make a net positive contribution to the social SDGs; and
- 79.2% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to all the SDGs.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:

o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);

via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs. During the Reference Period, 79.2% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) The exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has excluded companies involved in thermal coal production for example, and thus has allowed for a better coverage of indicators such as biodiversity and greenhouse gas emissions.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) similarly, social indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with DPAM's Controversial Activities Policy available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2024

What was the proportion of sustainability-related investments?

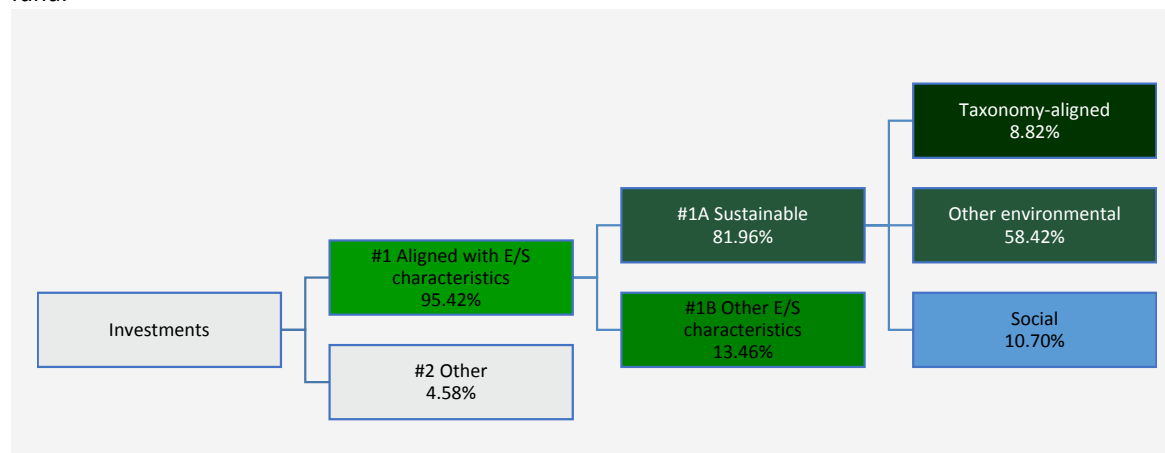

Asset allocation
describes the share of investments in specific assets.

What was the asset allocation?

By applying the investment strategy described above, the Sub-fund invests a minimum of 95.42% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S characteristics”).

The Sub-fund invested at least 81.96% of its assets in sustainable investments with environmental or social objectives (in the table referred to as “#1A Sustainable”).

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Financial and insurance activities	Financial service activities, except insurance and pension funding	42.81
Electricity, gas, steam and air conditioning supply	Electricity, gas, steam and air conditioning supply	11.97
Information and communication	Telecommunications	6.40
Real estate activities	Real estate activities	5.49
Manufacturing	Manufacture of chemicals and chemical products	3.28
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	2.57
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	2.41
Manufacturing	Manufacture of motor vehicles, trailers and semi-trailers	2.02
Manufacturing	Manufacture of electrical equipment	1.91
Information and communication	Information service activities	1.57
Professional, scientific and technical activities	Other professional, scientific and technical activities	1.36
Administrative and support service activities	Office administrative, office support and other business support activities	1.25
Professional, scientific and technical activities	Activities of head offices; management consultancy activities	1.23

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of fabricated metal products, except machinery and equipment	1.21
Administrative and support service activities	Travel agency, tour operator reservation service and related activities	1.14
Transportation and storage	Land transport and transport via pipelines	1.10
Wholesale and retail trade; repair of motor vehicles and motorcycles	Retail trade, except of motor vehicles and motorcycles	1.05
Manufacturing	Other manufacturing	0.93
Transportation and storage	Warehousing and support activities for transportation	0.90
Manufacturing	Manufacture of computer, electronic and optical products	0.88
Manufacturing	Manufacture of other transport equipment	0.87

Manufacturing	Manufacture of beverages	0.79
Other service activities	Other personal service activities	0.48
Administrative and support service activities	Rental and leasing activities	0.47
Information and communication	Motion picture, video and sound production and distribution	0.45
Liquid assets	Liquid assets	4.58

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 8.82% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 12.25% of investments contributed to climate change mitigation;
- 0.29% of investments contributed to climate change adaptation;
- 0.24% of investments contributed to the sustainable use and protection of water and marine resources,
- 0.15% of investments contributed to the transition to a circular economy;
- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☒ Yes:

☒ In fossil gas ☒ In nuclear energy

☐ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Transitional activities: 2.1%
Enabling activities: 5.68%

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	6.63%
1 January 2023 - 31 December 2023	9.11%
1 January 2024 - 31 December 2024	8.82%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 58.42% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

A sustainable investment is considered to have an environmental objective aligned with the EU Taxonomy if the issuer's eligible activities reach a 10% threshold of alignment with EU Regulation 2020/852 (Taxonomy Regulation). If the issuer's eligible economic activities do not reach the 10% threshold of alignment with the Taxonomy Regulation or if the issuer's economic activities are not covered by the Taxonomy Regulation, DPAM has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives.

This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to environmental objectives.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 10.7% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education, peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 4.58% in liquid assets. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

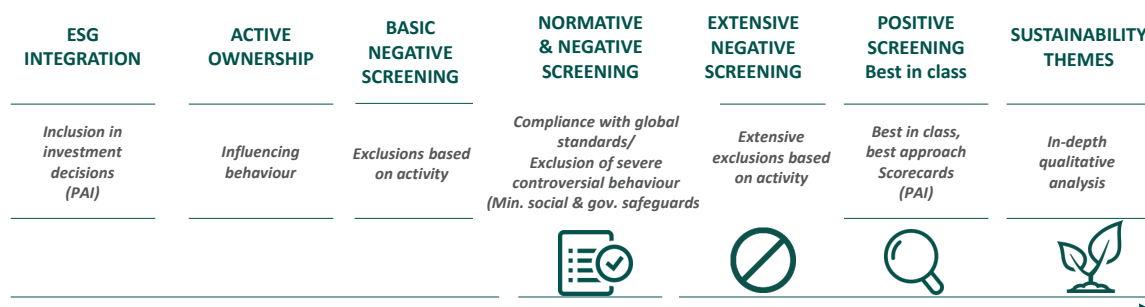

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

Subsequently, on a semi-annual basis, the resulting universe was subject to a "best-in-class" ranking in order to retain only the best ESG profiles of companies on a list of securities eligible for management (10% of the lowest scores were removed from the eligible list by sector).

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN SDGs.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable

- **How did this financial product perform compared with the broad market index?**

Not applicable

17. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES EUROPE INDEX

17.1. MANAGEMENT REPORT

17.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On 24 March 2022, the sub-fund received all the assets of the DPAM CAPITAL B Equities Europe Index sub-fund of the DPAM CAPITAL B Sicav. On 1 April 2022, the sub-fund was launched following the merger.

Subscription price during this period: The initial subscription price corresponds to the Net Asset Value of the shares of the DPAM CAPITAL B Equities Europe Index sub-fund of the DPAM CAPITAL B Sicav on 1 April 2022.

17.1.2. Stock exchange listing

The shares of the sub-fund are not listed on an exchange.

17.1.3. Aim and main outlines of the investment policy

Objective

The objective of the sub-fund is to provide shareholders with as high a global return as possible, with an accent on investments in European equities.

This is a passively managed sub-fund, which means that the portfolio manager aims to replicate the performance of a benchmark.

Investment policy

The sub-fund is a sub-fund within the meaning of Article 6 of the SFDR 2019/2088.

17.1.4. Index and benchmark

MSCI Europe Net Return. This benchmark is used in managing of the sub fund.

MSCI Europe Net Return covers approximately 85% of the floating market capitalisation of the countries in EUROPE included in the index. Additional information on this index and its composition can be found at www.msci.com.

The performance of the benchmark index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The tracking error is of the order of 1.3%.

The possible composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

17.1.5. Policy followed during the year

The benchmark of the DPAM B Equities Europe Index sub-fund is the MSCI Europe Net DTR Index. The MSCI Europe Net DTR Index, dividends net of local withholding tax reinvested, covers European countries and is established by MSCI. All the countries of Europe are included in this index, except Luxembourg given its low market capitalization. Greece was classified as an emerging country by the MSCI index at the end of 2013.

As of the end of the year, the index had 414 positions. The index value can be viewed on MSCI's website, www.msci.com/end-of-day-data-search. The composition of its indices can be viewed on the MSCI's website, www.msci.com/constituents.

The objective of the fund is to physically and fully replicate the composition of the underlying index. As in the past, full investment continued in this compartment. The level of liquidity, after deduction of futures contracts on stock market indices, was kept at a very low level. The use of futures on the Dow Jones Stoxx 50 index supplemented positions in equities and allowed to be fully invested through liquid instrument without disrupting the portfolio structure during daily subscriptions and redemptions.

During the year, the sub-fund closely followed the movement of the index.

17.1.6. Future policy

As in the past, the DPAM B Equities Europe Index sub-fund will pursue an investment policy based on geographic and sector indexation. The benchmark remains the MSCI Europe Net DTR Index published by MSCI.

17.1.7. Summary risk indicator

The summary risk indicator gives an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 4

17.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	63,125,104.88	20,871,558.06	83,996,662.94
Sales	7,794,051.25	23,442,352.40	31,236,403.65
Total 1	70,919,156.13	44,313,910.46	115,233,066.59
Subscriptions	73,355,985.07	46,981,068.50	120,337,053.57
Redemptions	27,752,634.18	59,618,385.72	87,371,019.90
Total 2	101,108,619.25	106,599,454.22	207,708,073.47
Reference average of the total net asset	699,783,072.94	740,456,406.86	720,230,869.23
Rotation Percentage	-4.31%	-8.41%	-12.84%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

17.10. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B (Cap)

Annual return:

This is a passively managed sub-fund, which means that the portfolio manager aims to replicate the performance of a benchmark.

Table of historical benchmark performance (actuarial returns):

The sub fund uses the following index as its benchmark: MSCI Europe Net Return

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
MSCI Europe Net Return	8.59 % (in EUR)	4.41 % (in EUR)	6.61 % (in EUR)	6.63 % (in EUR)	16/12/1992	7.92 % (in EUR)

Class A (Dis)

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class A (Dis)	7.84 % (in EUR)	3.86 % (in EUR)	6.16 % (in EUR)		09/11/2016	7.23 % (in EUR)

Class B (Cap)

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since

Class N (Cap)

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class N (Cap)	8.10 % (in EUR)	4.13 % (in EUR)	6.45 % (in EUR)		27/12/2017	6.28 % (in EUR)

17.11. CHARGES

Recurring costs

Class A (Dis) - BE6289131391:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.67 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.12 %

Class B (Cap) - BE6278393689:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.67 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.12 %

Class F (Cap) - BE0947566700:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.37 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.12 %

Class J (Cap) - BE6299531606:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.24 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.12 %

Class M (Dis) - BE6299532612:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.48 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.12 %

Class N (Cap) - BE6299533628:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.44 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.12 %

Fee sharing

As at 31 December 2024, 18.29% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

17.12. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

17.12.1. Gross dividends paid in the financial year

2016/2017	2.75 EUR
2018	class A 3.15 EUR class M 3.15 EUR
2019	class A 2.53 EUR class M 2.82 EUR
2021	class A 2.79 EUR class M 2.81 EUR
2023	class A 2.39 EUR class M 2.67 EUR

17.12.2. Investment restrictions and overruns

Between the NAV Dates of 05/02/2024 and 06/02/2024, a passive breach of the prospectus was opened in the sub fund DPAM B Equities Europe Index. Indeed, the sub fund must only be invested in issues of the MSCI Europe index. On 05/02/2024, following a demerger, the fund received units of PLUXEE FRANCE SA, which is not part of the index. The manager sold the shares as soon as they joined the fund.

17.12.3. Transparency in sustainability

Mandatory declaration in accordance with Article 7 of Regulation (EU) 2020/852 of 18 June 2020 on the establishment of a framework to promote sustainable investment and amending Regulation (EU) 2019/2088

The investments underlying this sub-fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Application of art. 7.1.b) of Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) - principal adverse impacts

During the period covered by the periodic report, this sub-fund did not take into account the principal adverse impacts (PINs), as it replicates an index whose methodology is determined by MSCI. methodology is determined by MSCI. Additional information on this index and its composition is available at available at www.msci.com

17.12.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

18. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES US INDEX

18.1. MANAGEMENT REPORT

18.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On 24 March 2022, the sub-fund received all the assets of the DPAM CAPITAL B Equities US Index sub-fund of the DPAM CAPITAL B Sicav. On 1 April 2022, the sub-fund was launched following the merger. Initial subscription price: Subscription price during this period. The initial subscription price corresponds to the Net Asset Value of the shares of the DPAM CAPITAL B Equities US Index sub-fund of the DPAM CAPITAL B Sicav on 1 April 2022.

18.1.2. Stock exchange listing

The shares of the sub-fund are not listed on an exchange.

18.1.3. Aim and main outlines of the investment policy

Objective

The objective is to obtain the highest possible overall return for shareholders, with emphasis on investments in US equities.

This is a passively managed sub-fund, which means that the portfolio manager's objective is to replicate the performance of a benchmark.

Investment policy

The sub-fund is a sub-fund within the meaning of Article 6 of the SFDR 2019/2088.

18.1.4. Index and benchmark

MSCI USA Net Return

This benchmark is used in the managing of the sub-fund.

MSCI USA Net Return covers approximately 85% of the free float market capitalisation of the countries in the USA included in the index. Additional information on this index and its composition is available at www.msci.com

The performance of this index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The tracking error is about 1.5%

The possible composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

18.1.5. Policy followed during the year

The benchmark of the Equities US Index sub-fund is the MSCI Daily Net Total Return USA Euro index.

The MSCI Daily Net Total Return USA Euro, dividends net of local withholding tax reinvested, covers the United States and is established by MSCI.

As of the end of the year, the index had 589 positions. The index value can be viewed on MSCI's website, www.msci.com/end-of-day-data-search. The composition of its indices can be viewed on the MSCI's website, www.msci.com/constituents.

The objective of the fund is to physically and fully replicate the composition of the underlying index (MSCI USA). As in the past, full investment continued in this compartment. The level of cash, after deduction of futures contracts on stock market indices, was kept at a very low level. The use of futures on the S&P 500 index supplemented positions in equities and allowed to be fully invested through liquid instruments without disrupting the portfolio structure during daily subscriptions and redemptions.

During the year, the sub-fund closely followed the movement of the index.

18.1.6. Future policy

As in the past, the Equities US Index sub-fund will pursue an investment policy based on geographic and sector indexation. The benchmark remains the USA index published by MSCI.

18.1.7. Summary risk indicator

The summary risk indicator gives an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and Reward Profile: 4.

18.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	4,741,186.45	36,724,079.21	41,465,265.66
Sales	7,626,790.85	23,377,274.53	31,004,065.38
Total 1	12,367,977.30	60,101,353.74	72,469,331.04
Subscriptions	22,810,146.86	70,764,110.62	93,574,257.48
Redemptions	28,090,960.21	54,488,055.77	82,579,015.98
Total 2	50,901,107.07	125,252,166.39	176,153,273.46
Reference average of the total net asset	265,213,139.53	290,645,718.90	277,998,917.13
Rotation Percentage	-14.53%	-22.42%	-37.30%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

On the date of publication of this report, the net asset value per share is published on the following websites: <https://www.funds.dpaminvestments.com/funds.html> and www.beama.be. This information is also available at the counters of the financial services department.

18.10. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B (Cap)

Annual return:

This is a passively managed sub fund, which means that the objective of the portfolio manager is to replicate the performance of a benchmark.

Table of historical benchmark performance (actuarial returns):

The sub fund uses the following index as its benchmark: MSCI USA Net Return

	Average cumulated returns				Since

18.12.2. Transparency in sustainability

Mandatory declaration in accordance with Article 7 of Regulation (EU) 2020/852 of 18 June 2020 on the establishment of a framework to promote sustainable investment and amending Regulation (EU) 2019/2088

The investments underlying this sub-fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Application of art. 7.1.b) of Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) - principal adverse impacts

During the period covered by the periodic report, this sub-fund did not take into account the principal adverse impacts (PINs), as it replicates an index whose methodology is determined by MSCI. methodology is determined by MSCI. Additional information on this index and its composition is available at available at www.msci.com

18.12.3. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

19. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES JAPAN INDEX

19.1. MANAGEMENT REPORT

19.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On 24 March 2022, the sub-fund received all the assets of the DPAM CAPITAL B Equities Japan Index sub-fund of the DPAM CAPITAL B Sicav. On 1 April 2022, the sub-fund was launched following the merger.

Subscription price during this period: The initial subscription price corresponds to the Net Asset Value of the shares of the DPAM CAPITAL B Equities Japan Index sub-fund of the DPAM CAPITAL B Sicav on 1 April 2022.

19.1.2. Stock exchange listing

The shares of the sub-fund are not listed on an exchange.

19.1.3. Aim and main outlines of the investment policy

Objective

The objective of the sub-fund is to provide shareholders with as high a global return as possible, with an accent on investments in Japanese equities.

This is a passively managed sub-fund, which means that the portfolio manager's objective is to replicate the performance of a benchmark.

Investment policy

The sub-fund is a sub-fund within the meaning of Article 6 of the SFDR 2019/2088.

19.1.4. Index and benchmark

MSCI Japan Net Return

This benchmark is used in managing the sub-fund.

MSCI Japan Net Return covers approximately 85% of the floating market capitalization of the countries in the JAPAN zone included in the index. Additional information on this index and its composition can be found at www.msci.com. The performance of the benchmark index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The tracking error is of the order of 2.0%.

The possible composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

19.1.5. Policy followed during the year

The benchmark of the DPAM B Equities Japan Index sub-fund is the MSCI Japan Net DTR Index. The MSCI Japan Net DTR Index, Net Dividends Reinvested, covers Japan and is established by MSCI.

As of the end of the year, the index had 191 positions. The index value can be viewed on MSCI's website, www.msci.com/end-of-day-data-search. The composition of its indices can be viewed on the MSCI's website, www.msci.com/constituents.

The objective of the fund is to physically and fully replicate the composition of the underlying. The use of futures on the Nikkei 225 index supplemented positions in equities and allowed to be fully invested through a liquid instrument without disrupting the portfolio structure during daily subscriptions and redemptions. The Nikkei 225 Index correlates well with the MSCI Japan Net DTR Index. The results obtained on these futures are therefore close to those which would have been obtained directly in securities.

During the year, the sub-fund closely followed the movement of the index.

19.1.6. Future policy

The DPAM B Equities Japan Index sub-fund, whose vocation is to be representative of the Japanese market, will continue its investment policy based on broad sector diversification with the MSCI Japan Net DTR Index published by MSCI as a benchmark.

19.1.7. Summary risk indicator

The summary risk indicator gives an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 4

19.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	2,741,144.18	868,931.08	3,610,075.26
Sales	9,848,504.90	23,374,852.57	33,223,357.47
Total 1	12,589,649.08	24,243,783.65	36,833,432.73
Subscriptions	6,569,770.54	2,516,056.05	9,085,826.59
Redemptions	14,495,196.87	25,736,241.18	40,231,438.05
Total 2	21,064,967.41	28,252,297.23	49,317,264.64
Reference average of the total net asset	115,517,924.37	98,593,135.50	107,009,287.34
Rotation Percentage	-7.34%	-4.07%	-11.67%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

19.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B (Cap)

Annual return:

This is a passively managed sub fund, which means that the objective of the portfolio manager is to replicate the performance of a benchmark.

Table of historical benchmark performance (actuarial returns):

The sub fund uses the following index as its benchmark: MSCI Japan Net Return

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year		
					Year	Value
MSCI Japan Net Return	15.53 % (in EUR)	6.06 % (in EUR)	6.52 % (in EUR)	7.92 % (in EUR)	02/10/1996	2.97 % (in EUR)

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.50 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.08 %

Class N (Cap) - BE6299537660:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.46 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.08 %

Class P (Cap) - BE6249812056:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.14 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.08 %

Fee sharing

As at 31 December 2024, 20.28% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

19.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

19.11.1. Gross dividends paid in the financial year

2016/2017 1.67 EUR

2018	class A 2.15 EUR
	class M 2.45 EUR
2019	class A 1.57 EUR
	class M 1.86 EUR
2021	class A 2.20 EUR
	class M 2.21 EUR
2022	class A 1.15 EUR
	class M 1.45 EUR
2023	class A 2.32 EUR
	class M 2.34 EUR

19.11.2. Investment restrictions and overruns

Between NAV Dates 16/09/2024 and 17/09/2024 a legal technical breach was open in the DPAM B Equities Japan Index subfund. Indeed, due to the fact that 16/09/2024 was a Japanese public holiday there was a 1 day mismatch between the settlement of a redemption and the settlement of the transactions made. This has caused a negative cash on NAV date 26/09/2024 of -1.351.047,67 EUR which accounted for -12.503% of the fund's TNA

19.11.3. Transparency in sustainability

Mandatory declaration in accordance with Article 7 of Regulation (EU) 2020/852 of 18 June 2020 on the establishment of a framework to promote sustainable investment and amending Regulation (EU) 2019/2088

The investments underlying this sub-fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Application of art. 7.1.b) of Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) - principal adverse impacts

During the period covered by the periodic report, this sub-fund did not take into account the principal adverse impacts (PINs), as it replicates an index whose methodology is determined by MSCI. methodology is determined by MSCI. Additional information on this index and its composition is available at available at www.msci.com.

19.11.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

20. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES EMU INDEX

20.1. MANAGEMENT REPORT

20.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: April 1, 2022.

On March 24, 2022, the sub-fund received all the assets of the DPAM CAPITAL B Equities EMU Index sub-fund of the DPAM CAPITAL B mutual fund. On April 1, 2022, the sub-fund was launched following the merger.

Subscription price during this period: The initial subscription price corresponds to the net asset value of the shares of the DPAM CAPITAL B Equities EMU Index subfund of the DPAM CAPITAL B mutual fund on April 1, 2022.

20.1.2. Stock exchange listing

The shares of the sub-fund are not listed on an exchange.

20.1.3. Aim and main outlines of the investment policy

Objective

The objective of the sub-fund is to provide shareholders with as high a global return as possible, with an accent on investments in equities from European Union member countries participating in the European Monetary Union (EMU).

This is a passively managed sub-fund, which means that the portfolio manager aims to replicate the performance of a benchmark.

Investment policy

The sub-fund is a sub-fund within the meaning of Article 6 of the SFDR 2019/2088.

20.1.4. Index and benchmark

MSCI EMU Net Return

The sub-fund uses the following index as its benchmark: MSCI EMU Net Return.

This benchmark is used in managing the sub-fund.

MSCI EMU Net Return covers approximately 85% of the floating market capitalization of the countries in the EMU zone included in the index. Additional information on this index and its composition can be found at www.msci.com.

The performance of the benchmark index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The tracking error is of the order of 0.80%.

The possible composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

20.1.5. Policy followed during the year

The benchmark of the DPAM B Equities EMU Index sub-fund is the MSCI EMU Net DTR Index. The MSCI EMU Net DTR Index, dividends net of local withholding tax reinvested, covers Eurozone countries and is established by MSCI. All the countries of Eurozone are included in this index, except Luxembourg given its low market capitalization. Greece was classified as an emerging country by the MSCI index at the end of 2013.

As of the end of the year, the index had 221 positions. The index value can be viewed on MSCI's website, www.msci.com/end-of-day-data-search. The composition of its indices can be viewed on the MSCI's website, www.msci.com/constituents.

The objective of the fund is to physically and fully replicate the composition of the underlying index. As in the past, full investment continued in this compartment. The level of cash, after deduction of futures contracts on stock market indices, was kept at a very low level. The use of futures on the Dow Jones EuroStoxx 50 index supplemented positions in equities and allowed to be fully invested through liquid instrument without disrupting the portfolio structure during daily subscriptions and redemptions.

During the year, the sub-fund closely followed the movement of the index.

20.1.6. Future policy

As in the past, the DPAM B Equities EMU Index sub-fund will pursue an investment policy based on geographic and sector indexation. The benchmark remains the MSCI EMU Net DTR Index published by MSCI.

20.1.7. Summary risk indicator

The summary risk indicator gives an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 4.

20.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	1,944,725.77	2,343,990.61	4,288,716.38
Sales	11,796,590.44	6,739,926.68	18,536,517.12
Total 1	13,741,316.21	9,083,917.29	22,825,233.50
Subscriptions	6,265,575.25	6,881,441.31	13,147,016.56
Redemptions	18,259,873.89	13,563,271.50	31,823,145.39
Total 2	24,525,449.14	20,444,712.81	44,970,161.95
Reference average of the total net asset	161,587,350.63	156,430,758.60	158,994,965.57
Rotation Percentage	-6.67%	-7.26%	-13.93%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

20.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B (Cap)

Annual return:

This is a passively managed sub fund, which means that the portfolio manager aims to replicate the performance of a benchmark.

Table of historical benchmark performance (actuarial returns):

The sub fund uses the following index as its benchmark: MSCI EMU Net Return.

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
MSCI EMU Net Return	9.48 % (in EUR)	4.41 % (in EUR)	6.60 % (in EUR)	6.87 % (in EUR)	15/04/1998	4.38 % (in EUR)

Class A (Dis)

Table showing historical performance (actuarial returns):

	class M 3.48 EUR

20.11.2. Investment restrictions and overruns

Between the NAV Dates of 05/02/2024 and 06/02/2024, a passive breach of the prospectus was opened in the sub fund DPAM B Equities EMU Index. Indeed, the sub fund must only be invested in issues of the MSCI EMU index. On the NAV date of 05/02/2024, following a split, the fund received units of PLUXEE FRANCE SA, which is not part of the index. The manager sold the shares as soon as they joined the fund.

20.11.3. Transparency in sustainability

Mandatory declaration in accordance with Article 7 of Regulation (EU) 2020/852 of 18 June 2020 on the establishment of a framework to promote sustainable investment and amending Regulation (EU) 2019/2088

The investments underlying this sub-fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Application of art. 7.1.b) of Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) - principal adverse impacts

During the period covered by the periodic report, this sub-fund did not take into account the principal adverse impacts (PINs), as it replicates an index whose methodology is determined by MSCI. methodology is determined by MSCI. Additional information on this index and its composition is available at available at www.msci.com.

20.11.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

**21. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES
WORLD EX JAPAN, EUROPE & USA INDEX**

21.1. MANAGEMENT REPORT

21.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On 24 March 2022, the sub-fund received all the assets of the DPAM CAPITAL B Equities World ex Japan, Europe & USA Index sub-fund of the DPAM CAPITAL B Sicav. On 1 April 2022, the sub-fund was launched following the merger. Subscription price during this period: The initial subscription price corresponds to the Net Asset Value of the shares of the DPAM CAPITAL B Equities World ex Japan, Europe & USA Index sub-fund of the DPAM CAPITAL B Sicav on 1 April 2022.

21.1.2. Stock exchange listing

The shares of the sub-fund are not listed on an exchange.

21.1.3. Aim and main outlines of the investment policy

Objective

The objective of the sub-fund is to provide shareholders with as high a global return as possible, with an accent on investments in equities from Pacific Basin countries (ex-Japan), Canada and Israel.

This is a passively managed sub-fund, which means that the portfolio manager aims to replicate the performance of a benchmark.

Investment policy

The sub-fund is a sub-fund within the meaning of Article 6 of the SFDR 2019/2088.

21.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: MSCI World ex JEU Net Return

MSCI World ex JEU Net Return: Composite index based on the MSCI Australia, Canada, Hong Kong, New Zealand, Singapore and Israel [Daily Total Return Net] indices of MSCI Inc. This benchmark is used for the management of the sub-fund.

MSCI World ex JEU Net Return covers approximately 85% of the floating market capitalization of the countries in the zone Australia, Canada, Hong Kong, New Zealand, Singapore and Israel included in the index.

Additional information on the index and its composition is available at www.msci.com.

The performance of the benchmark is calculated by reinvesting net dividends (Net Return).

MSCI Limited is registered with the European Securities and Markets Authority (ESMA).

The “tracking error” is of the order of 1.4%.

The possible composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

21.1.5. Policy followed during the year

The benchmark of the DPAM B Equities World Ex-JEU Index sub-fund is the MSCI Daily Net Total Return Index Australia, Canada, Hong Kong, New Zealand, Singapore and Israel. The benchmark, dividends net of local withholding tax reinvested, is based on the market capitalization of the MSCI indices for Australia, Canada, Hong Kong, New Zealand, Singapore and Israel.

As of the end of the year, the index had 201 positions. The index value can be viewed on MSCI's website, www.msci.com/end-of-day-data-search. The composition of its indices can be viewed on the MSCI's website, www.msci.com/constituents.

The objective of the fund is to physically and fully replicate the composition of the underlying index. As in the past, full investment continued in this compartment. The level of cash was kept at a very low level.

During the year, the sub-fund closely followed the movement of the index.

21.1.6. Future policy

As in the past, the DPAM B Equities World Ex-JEU Index sub-fund will pursue an investment policy based on geographic and sector indexation. The benchmark remains the same.

21.1.7. Summary risk indicator

The summary risk indicator gives an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 4

21.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	5,627,481.40	4,673,911.56	10,301,392.96
Sales	12,957,199.61	3,617,654.06	16,574,853.67
Total 1	18,584,681.01	8,291,565.62	26,876,246.63
Subscriptions	4,453,915.16	4,687,128.71	9,141,043.87
Redemptions	10,399,510.56	4,493,563.48	14,893,074.04
Total 2	14,853,425.72	9,180,692.19	24,034,117.91
Reference average of the total net asset	65,652,946.40	70,468,479.26	68,073,870.03
Rotation Percentage	5.68%	-1.26%	4.18%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

21.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

21.11.2. Transparency in sustainability

Mandatory declaration in accordance with Article 7 of Regulation (EU) 2020/852 of 18 June 2020 on the establishment of a framework to promote sustainable investment and amending Regulation (EU) 2019/2088

The investments underlying this sub-fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Application of art. 7.1.b) of Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) - principal adverse impacts

During the period covered by the periodic report, this sub-fund did not take into account the principal adverse impacts (PINs), as it replicates an index whose methodology is determined by MSCI. methodology is determined by MSCI. Additional information on this index and its composition is available at available at www.msci.com.

21.11.3. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

22. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES EMU BEHAVIORAL VALUE

22.1. MANAGEMENT REPORT

22.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On 24 March 2022, the sub-fund received all the assets of the DPAM CAPITAL B Equities EMU Behavioral Value sub-fund of the DPAM CAPITAL B Sicav. On 1 April 2022, the sub-fund was launched following the merger.

Subscription price during this period: The initial subscription price corresponds to the Net Asset Value of the shares of the DPAM CAPITAL B Equities EMU Behavioral Value sub-fund of the DPAM CAPITAL B Sicav on 1 April 2022.

22.1.2. Stock exchange listing

The shares of the sub-fund are not listed on an exchange.

22.1.3. Aim and main outlines of the investment policy

Objective

The objective of the sub-fund is to provide the shareholders with as high a global return as possible. The sub-fund invests at least 50% in listed equities (without sector limitation) from the European Union member countries participating in the European Monetary Union (EMU). The investment policy is based on the principles of Behavioral Finance, an academic field which analyses financial markets with the aid of psychology.

The sub-fund invests in considered undervalued and showing good momentum. The risks are widely spread, among others by a broad sector diversification.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

Investment policy

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

22.1.4. Index and benchmark

The sub-fund uses the following index as its benchmark: MSCI EMU Net Return.

This index is representative of the large- and mid-cap equity market of developed countries (as defined by MSCI and mainly according to the country of incorporation and the country of primary listing of its securities) in the EMU zone. The performance of this index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance.

The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the sub-fund. Please refer to the “Investment Strategy” section in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The possible composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

22.1.5. Policy followed during the year

After a volatile first semester which was challenging for value styles in relative terms (mostly in January and June relatively to the market as high growth and good quality stocks outperformed in technologies and luxury industry), the second half of the year was more favorable for the value style as financials continued to shine while darling stocks of the market in the technologies or luxury suffered profit taking and less favorable backdrop. The fund managed to outperform its reference index over the last six months.

Over the last semester, the strategy benefited mostly from its sector allocation thanks to its underweight in technologies, consumer discretionary, and slight overweight in communication services as well as in the banks. In absolute terms, the best contributing sectors were the industrials, financials, and health care while energy, technologies, and consumers staples were the most detrimental. The stock selection was mostly beneficial in the industrials thanks to the strong performance of Siemens Energy, Saint-Gobain, or Siemens. In the banks, the overweight in Italian names like Banco BPM and Unicredit helped the most as merger & acquisition themes animated the market. Also, to note the strong performance of internet retailer Zalando. The best individual contributors were Siemens Energy, SAP, Deutsche Telekom, UCB, Siemens, Unicredit, Banco BPM, and the retailing holding Prosus while STM, TotalEnergies, Scor, LVMH, ABInbev, Infineon, and Mercedes topped the most detrimental contributors. In general, exposure to energy transition (for instance with Siemens Energy, or Saint-Gobain) and electrification (Prysmian) thematic continue to deliver positively.

Over the entire year, the fund has been trailing the reference index as the first semester underperformance was too big a hurdle to overcome. Relatively to the benchmark, the allocation (underweight consumer discretionary, technologies, overweight financials, and communication services) contributed positively but the stock selection in technologies (missing ASML and ASMI and investing in STM and Infineon instead) cost the most. The stock selection in utilities was also detrimental as RWE, Iberdrola, and Acciona cost dearly. In the consumer discretionary, Puma, SeB were the most detrimental.

Over the year, the fund kept balanced sector exposure with a defensive and value tilt. We slightly overweighted healthcare, utilities, communication services, and the financials, and underweighted Information technologies, consumer discretionary, industrials, and the materials. As far as value sector allocation, the slight overweight in energy was detrimental while in the defensive camp, health care overweight also cost.

22.1.6. Future policy

Value style should continue to benefit from cheap relative valuation as well as relatively good earnings growth and momentum. We will continue to implement the behavioral value systematic strategy by replacing relatively more expensive stocks within sectors by cheaper ones, avoiding value trapped, more financially challenged stocks, as well as highly controversial companies in terms of ESG. We pay close attention to the balance sheet quality and leverage as economic momentum could stay soft. The funds will keep a diversified sector and fairly neutral sector allocation though starting the year with a slight defensive (utilities, health care, staples) and value (financials, real estate) overweight tilt. The cyclical (industrials, materials, consumer discretionary, energy) will be underweighted initially.

22.1.7. Summary risk indicator

The summary risk indicator gives an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 5

22.2. BALANCE SHEET

TOTAL	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

22.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	30,293,352.03	18,015,175.42	48,308,527.45
Sales	44,209,842.56	23,949,832.64	68,159,675.20
Total 1	74,503,194.59	41,965,008.06	116,468,202.65
Subscriptions	25,315.86	80,705.72	106,021.58
Redemptions	14,973,537.18	6,082,711.53	21,056,248.71
Total 2	14,998,853.04	6,163,417.25	21,162,270.29
Reference average of the total net asset	28,801,916.46	20,561,608.30	24,659,247.88
Rotation Percentage	206.60%	174.12%	386.49%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

22.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	1.11 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	1.13 %

Class W (Cap) - BE6289169771:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	1.04 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	1.13 %

Fee sharing

As at 31 December 2024, 44.19% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

22.11.2. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

22.11.3. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with a social objective </div> <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

● How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a) The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- b) The Sub-fund has not been exposed to companies involved in excluded controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

c) The Sub-fund has not been exposed to companies facing the most serious ESG controversies around environmental or social issues.

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	99.66%	97.63%	99.5%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments are directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report <https://www.dpaminvestments.com/documents/voting-activity-report-enBE> and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
SAP AG	Information and communication	4.99	Germany
DEUTSCHE TELEKOM (NOM)	Information and communication	3.05	Germany
SANOFI	Manufacturing	2.97	France
SIEMENS (NOM)	Manufacturing	2.79	Germany
TOTAL ENERGIES	Mining and quarrying	2.39	France
BANCO SANTANDER SA	Financial and insurance activities	2.36	Spain
STMICROELECTRONICS	Manufacturing	2.28	France
SAINT-GOBAIN	Manufacturing	2.26	France

Largest investments	Sector	% Assets	Country
UNICREDIT SPA	Financial and insurance activities	2.24	Italy

ENGIE	Electricity, gas, steam and air conditioning supply	2.18	France
KERING SA	Manufacturing	2.07	France
PROSUS NV	Information and communication	2.02	Netherlands
HENKEL AG	Manufacturing	1.97	Germany
PRYSMIAN	Manufacturing	1.95	Italy

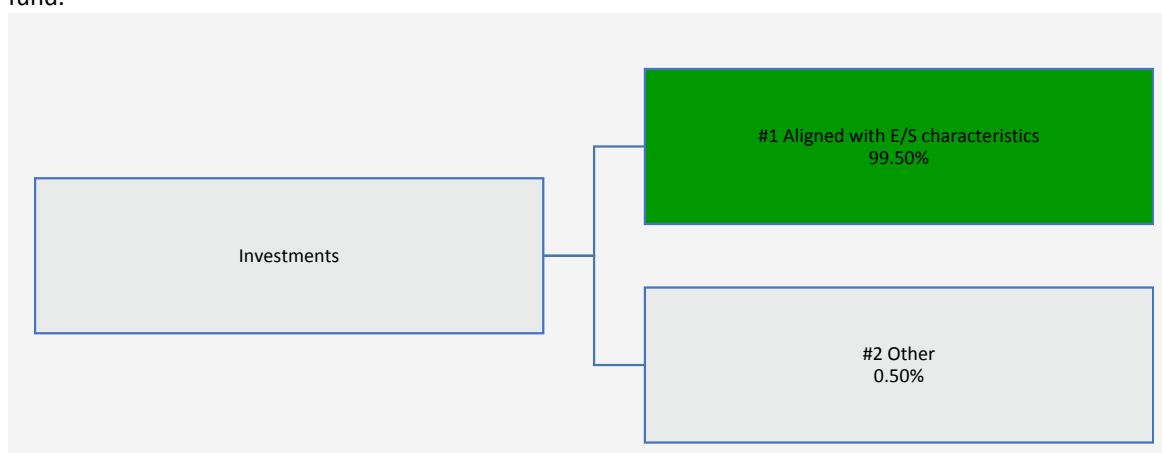

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

● What was the asset allocation?

Through the application of the investment strategy described above, the Sub-fund has invested 99.5% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S Characteristics”).

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

● In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Financial and insurance activities	Financial service activities, except insurance and pension funding	13.83
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	7.44
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	6.20
Manufacturing	Manufacture of computer, electronic and optical products	6.14
Electricity, gas, steam and air conditioning supply	Electricity, gas, steam and air conditioning supply	5.85

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☐ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● What was the share of investments made in transitional and enabling activities?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

greenhouse gas emission levels corresponding to the best performance.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

- What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

Not applicable

Are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- What was the share of socially sustainable investments?**

Not applicable

- What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 0.50% in liquid assets. There are no minimum environmental or social guarantees on these investments.

- What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

The stages of the investment process are outlined below:

How did this financial product perform compared with the reference benchmark?

Not applicable

● **How does the reference benchmark differ from a broad market index?**

Not applicable

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable

● **How did this financial product perform compared with the reference benchmark?**

Not applicable

● **How did this financial product perform compared with the broad market index?**

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

23. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES US BEHAVIORAL VALUE
--

23.1. MANAGEMENT REPORT

23.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On 24 March 2022, the sub-fund received all the assets of the DPAM CAPITAL B Equities US Behavioral Value sub-fund of the DPAM CAPITAL B SICAV. On 1 April 2022, the sub-fund was launched following the merger.

Subscription price during this period: The initial subscription price corresponds to the net asset value of the shares of the DPAM CAPITAL B Equities US Behavioral Value sub-fund of the DPAM CAPITAL B Sicav on 1 April 2022.

23.1.2. Stock exchange listing

The shares of the sub-fund are not listed on an exchange.

23.1.3. Aim and main outlines of the investment policy

Objective

The objective of the sub-fund is to provide the shareholders with as high a global return as possible. The sub-fund invests in American listed equities. The investment policy is based on the principles of Behavioral Finance, an academic field which analyses financial markets with the aid of psychology.

The sub-fund invests in equities considered undervalued and showing good momentum. The risks are widely spread, among others by a broad sector diversification.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

Investment policy

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

23.1.4. Index and benchmark

The sub-fund uses the following index as its benchmark: MSCI USA Net Return.

This index is representative of the large- and mid-cap equity market of developed countries (as defined by MSCI and mainly based on the country of incorporation and the country of primary listing of its securities) in the United States.

The performance of this index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance.

The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the sub-fund. Please refer to the "Investment strategy" section of the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The composition and value of the benchmark, if any, can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

23.1.5. Policy followed during the year

US equities rallied strongly in 2024 with double-digit returns for the second consecutive year. Returns were driven by a limited number of companies (the magnificent 7) although the rally broadened by the end of the year. Nevertheless, with the best returns realized by large-cap growth companies while the fund is by conception focused on mid-cap value companies, this had its impact on fund performance.

Best performances were delivered within financials, energy and industrials while especially IT but also communication services and consumer discretionary weighed on performance.

Within financials, the fund benefited from its overweight in Synchrony Financial, Bank of New York Mellon and Hartford Financial Services. Energy was supported by our overweight in Baker Hughes while industrials was helped by our overweight in Vertiv Holdings.

On the other hand, IT suffered from our underweight in heavyweight Nvidia and Broadcom. Communication services was hit by our overweight in Comcast and underweight in Meta. Consumer discretionary underperformed due to our underweight in heavyweight Tesla.

23.1.6. Future policy

We will continue to implement the behavioral value systematic strategy by replacing relatively more expensive stocks (within sectors) by cheaper ones, avoiding value trapped, more financially challenged stocks, as well as highly controversial companies in terms of ESG. The funds will keep a diversified and close to neutral allocation at the sector level.

23.1.7. Summary risk indicator

The summary risk indicator gives an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and Reward Profile : 4.

23.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	117,759,366.03	28,743,597.36	146,502,963.39
Sales	337,235,941.05	268,665,974.80	605,901,915.85
Total 1	454,995,307.08	297,409,572.16	752,404,879.24
Subscriptions	9,504,877.31	2,552,735.72	12,057,613.03
Redemptions	231,593,923.56	243,954,173.51	475,548,097.07
Total 2	241,098,800.87	246,506,909.23	487,605,710.10
Reference average of the total net asset	322,793,627.07	92,556,571.98	207,046,036.53
Rotation Percentage	66.26%	55.00%	127.89%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

On the date of publication of this report, the net asset value per share is published on the following websites: <https://www.funds.dpaminvestments.com/funds.html> and www.beama.be. This information is also available at the counters of the financial services department.

23.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B (Cap)

Annual return:

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark. The benchmark is used to compare performance.

Table of historical benchmark performance (actuarial returns):

The sub fund uses the following index as its benchmark: MSCI USA Net Return

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
MSCI USA Net Return	32.90 % (in EUR)	11.53 % (in EUR)	15.89 % (in EUR)	14.25 % (in EUR)	30/09/2004	11.14 % (in EUR)

Class A (Dis)

Table showing historical performance (actuarial returns):

23.11.2. Investment restrictions and overruns

Between NAV Dates 22/07/2024 and 23/07/2024 a legal active breach was open in the DPAM B Equities US Behavioral Value subfund. Indeed, due to an outflow (EUR 61 million or 23% of the assets of the fund) on TD 19/07/2024 and VD 22/07/2024 the amount of cash deposited at the same entity exceeded 20%. The total weight attributed to 30.46%. The breach was caused as these transactions were made in the US market, a settlement cycle of T+1 applies causing the cash of these transactions to settle 1 day earlier than the outflow (T+2).

Between NAV Dates 06/09/2024 and 18/09/2024 a legal active breach was open in the DPAM B Equities US Behavioral Value subfund. Indeed, due to an outflow (EUR 32 million or 25% of the assets of the fund) on TD 05/09/2024 and VD 09/09/2024 the amount of cash deposited at the same entity exceeded 20%. The total weight attributed to 25.233%. The breach was caused as these transactions were made in the US market, a settlement cycle of T+1 applies causing the cash of these transactions to settle 1 day earlier than the outflow (T+2). The breach remained open as more outflows followed and the weight in assets in deposits placed with the same entity remained above 20%.

Between NAV Dates 07/10/2024 and 10/10/2024 a legal active breach was open in the DPAM B Equities US Behavioral Value subfund. Indeed, due to an outflow (EUR 6 million or 24% of the assets of the fund) on TD 04/10/2024 and VD 08/10/2024 the amount of cash deposited at the same entity exceeded 20%. The total weight attributed to 25.164%. The breach was caused as these transactions were made in the US market, a settlement cycle of T+1 applies causing the cash of these transactions to settle 1 day earlier than the outflow (T+2). The breach remained open as more outflows followed and the weight in assets in deposits placed with the same entity remained above 20%.

23.11.3. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

23.11.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with a social objective </div> <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

● How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a) The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- b) the Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

c) The Sub-fund has not been exposed to companies facing the most serious ESG controversies around environmental or social issues.

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	97.72%	99.38%	97.8%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments are directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and votes over the Reference Period are available in the voting report and the engagement report (accessible at <https://www.dpaminvestments.com>).

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
MICROSOFT	Information and communication	5.36	United States of America
AMAZON COM	Wholesale and retail trade; repair of motor vehicles and motorcycles	5.21	United States of America
WALT DISNEY	Information and communication	2.15	United States of America
MORGAN STANLEY	Financial and insurance activities	2.08	United States of America
COMCAST CORP A	Information and communication	2.03	United States of America

Largest investments	Sector	% Assets	Country
VERIZON COMMUNICATIONS	Information and communication	1.99	United States of America
JP MORGAN CHASE	Financial and insurance activities	1.99	United States of America
AT&T INC	Information and communication	1.82	United States of America
BANK OF NEW YORK MELLON CORPORATION	Financial and insurance activities	1.70	United States of America
CISCO SYSTEMS	Manufacturing	1.64	United States of America
BANK OF AMERICA	Financial and insurance activities	1.58	United States of America
SALESFORCE.COM, INC.	Information and communication	1.57	United States of America
CIGNA CORPORATION	Financial and insurance activities	1.53	United States of America
QUALCOMM INC	Manufacturing	1.44	United States of America
APPLIED MATERIALS	Manufacturing	1.44	United States of America

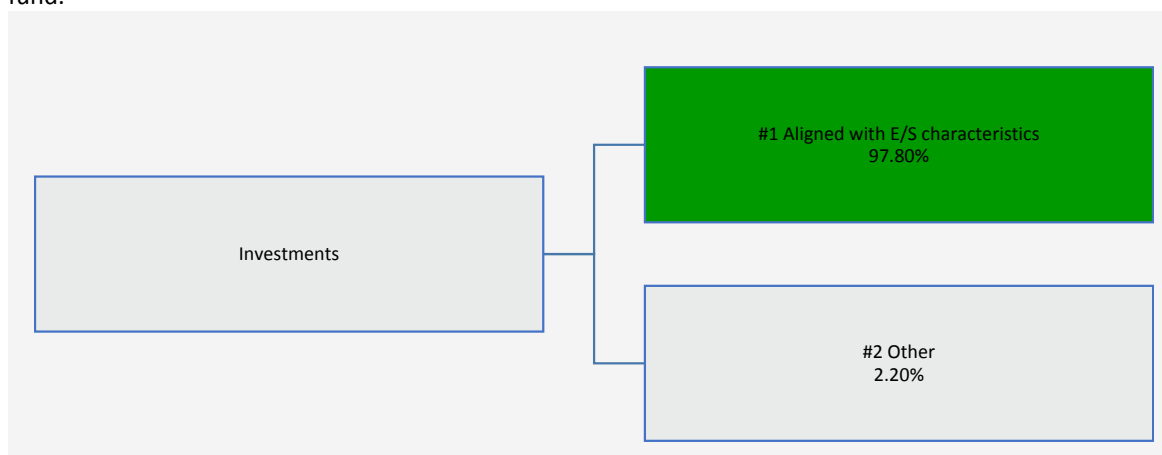

What was the proportion of sustainability-related investments?

What was the asset allocation?

Through the application of the investment strategy described above, the Sub-fund has invested 97.8% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of computer, electronic and optical products	16.19
Information and communication	Publishing activities	11.91
Wholesale and retail trade; repair of motor vehicles and motorcycles	Retail trade, except of motor vehicles and motorcycles	8.72
Manufacturing	Manufacture of machinery and equipment n.e.c.	7.53
Financial and insurance activities	Financial service activities, except insurance and pension funding	7.39
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	6.60
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	4.71
Information and communication	Telecommunications	3.81
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	3.78
Manufacturing	Manufacture of food products	3.12
Electricity, gas, steam and air conditioning supply	Electricity, gas, steam and air conditioning supply	2.34
Mining and quarrying	Mining support service activities	2.30
Information and communication	Motion picture, video and sound production and distribution	2.15
Manufacturing	Manufacture of motor vehicles, trailers and semi-trailers	2.09
Real estate activities	Real estate activities	2.06
Information and communication	Programming and broadcasting activities	2.03
Manufacturing	Manufacture of other non-metallic mineral products	1.95
Construction	Construction of buildings	1.80
Transportation and storage	Land transport and transport via pipelines	1.25
Manufacturing	Printing and reproduction of recorded media	1.07
Manufacturing	Manufacture of electrical equipment	0.94
Information and communication	Computer programming, consultancy and related activities	0.94
Manufacturing	Manufacture of chemicals and chemical products	0.89
Manufacturing	Manufacture of beverages	0.86
Manufacturing	Manufacture of coke and refined petroleum products	0.81
Mining and quarrying	Mining of metal ores	0.56
Liquid assets	Liquid assets	2.20

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**
- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☐ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What was the share of investments made in transitional and enabling activities?**
- Not applicable

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

Are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 2.20% in liquid assets. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

The stages of the investment process are outlined below:

How did this financial product perform compared with the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**

Not applicable

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable

- **How did this financial product perform compared with the reference benchmark?**

Not applicable

- **How did this financial product perform compared with the broad market index?**

Not applicable

**24. INFORMATION ABOUT THE SUBFUND DPAM B REAL ESTATE
EMU DIVIDEND SUSTAINABLE**

24.1. MANAGEMENT REPORT

24.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022. On 24 March 2022, the sub-fund received all the assets of the DPAM CAPITAL B Real Estate EMU Dividend Sustainable sub-fund of the DPAM CAPITAL B SICAV. On 1 April 2022, the sub-fund was launched following the merger.

Subscription price during this period: the initial subscription price corresponds to the Net Asset Value of the shares of the DPAM CAPITAL B Real Estate EMU Dividend Sustainable sub-fund of the DPAM CAPITAL B SICAV dated 1 April 2022.

24.1.2. Stock exchange listing

The shares of the sub-fund are not listed on an exchange.

24.1.3. Aim and main outlines of the investment policy

Objective

The objective of this sub-fund is to offer shareholders the highest long-term return by investing its assets in securities representative of the real estate sector in the broad sense in the EMU zone.

The weighted average dividend yield of the sub-fund's assets must exceed the dividend yield of the FTSE EPRA/NAREIT Eurozone Capped Net Return Index. These companies are selected on the basis of compliance with environmental, social and governance (ESG) criteria.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

This is an actively managed fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

The sub-fund will not invest more than 10% of its assets in units of other collective investment.

Investment policy

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

24.1.4. Index and benchmark

The sub-fund uses the following index as its benchmark: FTSE EPRA/NAREIT Eurozone Capped Net Return index.

This index is representative of the market for listed real estate companies in developed countries (as defined in the index methodology) in the EMU zone.

Index performance is calculated with net dividends reinvested (Net Return).

FTSE International Limited is registered with ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance and to select a large proportion of the securities in the portfolio.

The benchmark is not aligned with the promotion of the sub-fund's environmental and social characteristics. Please refer to the “Investment strategy” section of the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

24.1.5. Policy followed during the year

2024 was marked by high volatility in interest rates, with macroeconomic and geopolitical factors significantly influencing the fund's strategy. The year began on a negative note with rising long-term interest rates. However, from June to December, the Euro 5-year swap rate decreased by nearly 1%, aiding market recovery. The second half of the year experienced heightened political tensions in France and Germany, the election of Mr. Trump in the US, and the extension of conflicts in Ukraine and Israel.

In the physical real estate market, property values continued to decline, though this was partly cushioned by rising rent levels and the decline was materially lower than in 2023. Many properties have reached their trough valuation points towards the end of 2024. Depending on the type and size of assets, the investment market began to reopen slowly but steadily.

In the listed space, property companies continued their deleveraging strategies through asset disposals, dividend cuts, or equity injections.

The growth prospects in the US following Trump's election, coupled with renewed fear of higher inflation and higher interest rates and with European political tensions and conflicts, led investors to shy away from some European stock markets. The year-end saw a sell-off across all listed real estate sub-sectors, bringing the total return of the Eurozone listed real estate sector to approximately -2.6% for the year.

In this macroeconomic context, the fund increased its exposure to the residential subsector throughout the year while reducing its exposure to logistics and retail.

24.1.6. Future policy

For 2025, the further expected downwards rate path of the European Central Bank and a normalized financing environment, which is also due to affordable credit spreads, should increase transaction volumes in the investment market. This should set clearance prices for assets between equity rich buyers and equity poor and motivated sellers leading to a normalized real estate market.

Our strategy moving forward will depend on the outlook for companies in this volatile environment. We will continue to maintain a balanced portfolio. On one hand, we will focus on companies with strong balance sheets, robust growth prospects and a good earnings visibility. On the other hand, we will also consider companies that are currently challenged but have management teams capable of improving earnings and visibility. These companies trade at a significant discount, offering potential upside to their share prices.

The investment themes for the first half of 2025 are:

- Companies with strong balance sheets holding quality assets, as opposed to those with excessive leverage.
- Companies operating in subsectors with supply shortages and higher rents, rather than those with oversupply and lower rent growth.
- Companies with strong ESG profiles.
- Shares in companies that offer a higher dividend and lower beta compared to the benchmark of the fund.
- A focus on total return, combining sustainable dividends and capital appreciation from rental growth.
- Emphasis on long leases and quality tenants with competitive advantages to strengthen cash flows.

- In a highly volatile environment, capitalizing on excessive market movements by rebuilding positions in strong companies that have been excessively penalized, and vice versa.
- Companies that are clearly undervalued compared to industry peers

24.1.7. Summary risk indicator

The summary risk indicator gives an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 5

24.5. GEOGRAPHIC ALLOCATION OF INVESTMENTS

By country	% Portfolio
FRANCE	36.23%
GERMANY (FEDERAL REPUBLIC)	23.57%
BELGIUM	20.98%
NETHERLANDS	6.22%
LUXEMBOURG (GRAND DUCHY)	4.87%
SPAIN	4.27%
GUERNSEY	2.01%
FINLAND	1.85%
Total	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

24.6. ECONOMIC ALLOCATION OF INVESTMENTS

By sector	% Portfolio
REAL ESTATE	92.07%
FINANCIAL SERVICES - HOLDINGS	4.09%
OTHER SERVICES	3.84%
TOTAL	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

24.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	22,632,274.31	24,555,356.38	47,187,630.69
Sales	23,332,468.87	18,736,698.74	42,069,167.61
Total 1	45,964,743.18	43,292,055.12	89,256,798.30
Subscriptions	11,961,021.15	16,518,702.62	28,479,723.77
Redemptions	15,801,014.86	10,844,031.64	26,645,046.50
Total 2	27,762,036.01	27,362,734.26	55,124,770.27
Reference average of the total net asset	99,156,880.15	106,936,513.88	103,067,952.85
Rotation Percentage	18.36%	14.90%	33.12%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

On the date of publication of this report, the net asset value per share is published on the following websites: <https://www.funds.dpaminvestments.com/funds.html> and www.beama.be. This information is also available at the counters of the financial services department.

24.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B (Cap)

Annual return:

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark. The benchmark is used to compare performance.

Table of historical benchmark performance (actuarial returns):

The sub fund uses the following index as its benchmark: FTSE EPRA/NAREIT Eurozone Capped Net Return

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
FTSE EPRA/NAREIT Eurozone Capped Net Return	-2.61 % (in EUR)	-8.84 % (in EUR)	-6.40 % (in EUR)	1.50 % (in EUR)	11/12/2003	2.58 % (in EUR)

Class B (Cap)

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class B (Cap)	-2.52 % (in EUR)	-8.28 % (in EUR)	-6.37 % (in EUR)	1.15 % (in EUR)	11/12/2003	4.94 % (in EUR)

Class E (Dis)

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class E (Dis)	-1.67 % (in EUR)	-7.48 % (in EUR)	-5.67 % (in EUR)		04/05/2018	-2.34 % (in EUR)

Class F (Cap)

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class F (Cap)	-1.66 % (in EUR)	-7.48 % (in EUR)	-5.66 % (in EUR)	1.69 % (in EUR)	27/12/2007	3.08 % (in EUR)

Class M (Dis)

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class M (Dis)	-1.76 % (in EUR)	-7.57 % (in EUR)	-5.75 % (in EUR)		04/01/2018	-2.34 % (in EUR)

24.10. CHARGES

Recurring costs

Class A (Dis) - BE6289205161:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	1.74 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.33 %

Class B (Cap) - BE0942186256:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	1.81 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.33 %

Class E (Dis) - BE0947578820:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.93 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.33 %

Class F (Cap) - BE0947577814:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.93 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.33 %

Class M (Dis) - BE6299347706:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	1.04 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.33 %

Fee sharing

As at 31 December 2024, 64.09% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroef Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroef Petercam or one of its subsidiaries are distributors in the same way as external distributors.

24.11.2. Investment restrictions and overruns

Between NAV Dates 05/02/2024 and 06/02/2024, a legal liability overrun was opened in the DPAM sub fund B Real Estate EMU Dividend Sustainable. Indeed, because of a subscription, the sum of the issuers representing more than 5% each represented more than 40% of the fund's total net assets. The total weight attributed to 40.468%. The overrun was caused by an entry into the fund which is reflected in T +1 in the NAV and the purchase transactions following the entry that was reflected in T in the NAV. Both entry and purchase transactions monitoring the correct accounting rules and standards and the breach was therefore inevitable and caused by the practices accounting.

Between NAV Dates 05/03/2024 and 06/03/2024, a legal overrun was opened in the sub fund DPAM B Real Estate EMU Dividend Sustainable. Indeed, because of a subscription, the sum of the issuers representing more than 5% each represented more than 40% of the fund's total net assets. The total weight attributed to 45.828%. And the the fund held more than a maximum of 10% in the same issuer, 10.27% in Unibail Rodamco Westfield and 10.33% in VONOVIA SE. The breach was caused by an entry into the fund which is reflected in T +1 in the NAV and the purchase transactions following the entry that have been reflected in T in the NAV. Both entry transactions and purchase transactions followed the correct accounting rules and standards and the breach was therefore unavoidable and caused by accounting practices.

Between the NAV Dates of 27/05/2024 and 28/05/2024, an active legal violation was opened in the sub fund DPAM B Real Estate EMU Dividend Sustainable. Indeed, the sum of issuers representing more than 5% each represented more than 40% of the fund's TNA. The total weight attributed to 44.665%. The overrun was mainly caused by a corporate action for COVIVIO SA which resulted in the receipt of a dividend in shares on the date of the NAV 27/05/2024 increasing the weight of this issuer beyond the limit of 5%. The portfolio manager would have had to anticipate the overrun because it was predictable with the NAV data as of 24/05/2024.

Between NAV Dates 03/07/2024 and 04/07/2024 a legal technical breach was open in the DPAM B Real Estate EMU Dividend Sustainable subfund. Indeed, due to a subscription the sum of issuers representing more than 5% each represented more than 40% of the fund's TNA. The total weight attributed to 46.733%. And the fund held more than the maximum of 10% in the same issuer, 10.004% in Unibail-Rodamco-Westfield. The breach was caused by an inflow in the fund which is reflected on T +1 in the NAV and the purchase transactions following the inflow that were reflected on T in the NAV. Both the inflow and purchase transactions followed the correct accounting rules and standards and therefore the breach was unavoidable and caused by accounting practices.

Between NAV Dates 05/11/2024 and 06/11/2024 a legal technical breach was open in the DPAM B Real Estate EMU Dividend Sustainable subfund. Indeed, due to a subscription the sum of issuers representing more than 5% each represented more than 40% of the fund's TNA. The total weight attributed to 42.164%. The breach was caused by an inflow in the fund which is reflected on T +1 in the NAV and the purchase transactions following the inflow that were reflected on T in the NAV. Both the inflow and purchase transactions followed the correct accounting rules and standards and therefore the breach was unavoidable and caused by accounting practices.

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The DPAM B Real Estate EMU Dividend Sustainable fund takes the commitment to invest at least 20% of their assets in investments with a social objective according to the waterfall methodology. Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 17/05/2024 and 31/12/2024. On NAV date 17/05/2024, those assets represented 0% of the fund's NAV. The breach was closed after an adaptation of the fund's prospectus.

24.11.3. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

24.11.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

DPAM B REAL ESTATE EMU DIVIDEND
SUSTAINABLE

Legal entity identifier:

549300XZ4Z1DCG9U4G65

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 96.81% of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

● How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. The Sub-fund has no exposure to issuers whose ESG score resulting from the manager's proprietary "scorecard ESG" rating model is below two out of five;
- e. As at 31 December 2024, the proportion of issuers with Science Based Targets initiative (SBTi) or equivalent in the Sub-fund's portfolio was 76.79% (by weight of portfolio assets). The target is to reach at least 50% by 2026.

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	97.56%	99.97%	98.91%
Sustainable Investment	94.96%	97.94%	96.81%
Other Environmental Investments	0.00%	8.94%	72.34%
Social	44.25%	31.57%	0.00%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	No exposure	No exposure	No exposure
Sustainability indicator e.	Sub-fund: 56.84	Sub-fund: 62.83	Sub-fund: 76.79

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments. The objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest (a) in companies whose core business is the development of products and services that contribute to the achievement of the 17 environmental or social Sustainable Development Goals ("SDGs"), as defined by the United Nations (UN) (e.g. health products and services, education-related services, water saving and access solutions, energy efficiency solutions, digitalisation-enabling services, sustainable mobility services, etc.) via:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);
- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs; and
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to all the SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

For the Reference Period, the Sub-fund had 96.81% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 15.99% of the Sub-fund's portfolio contributed to the achievement of one or more of the environmental objectives defined by the EU;
 - 72.34% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy.
 - 0% of the Sub-fund's portfolio contributed to the achievement of social objectives.
 - 96.81% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to all the SDGs.
- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:
 - o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);
- via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).
- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs. During the Reference Period, 96.81% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
LEG IMMOBILIEN	Real estate activities	9.38	Germany
UNIBAIL-RODAMCO	Real estate activities	9.36	France
VONOVIA	Real estate activities	9.23	Germany
GECINA	Real estate activities	6.81	France
COVIVIO	Real estate activities	4.76	France
TAG TEGERNSEE IMMOBILIER	Real estate activities	4.69	Germany
KLEPIERRE	Real estate activities	4.66	France
WAREHOUSES DE PAUW	Real estate activities	3.93	Belgium
MERLIN PROPERTIES SOCIMI SA	Real estate activities	3.80	Spain
COFINIMMO	Real estate activities	3.70	Belgium
EUROCOMMERCIAL PPTY	Financial and insurance activities	3.22	Netherlands
XIOR STUDENT HOUSING	Accommodation and food service activities	3.15	Belgium
AEDIFICA	Real estate activities	3.13	Belgium
GRAND CITY PROPERTIES	Real estate activities	2.98	Germany
MERCIALYS	Real estate activities	2.83	France

What was the proportion of sustainability-related investments?

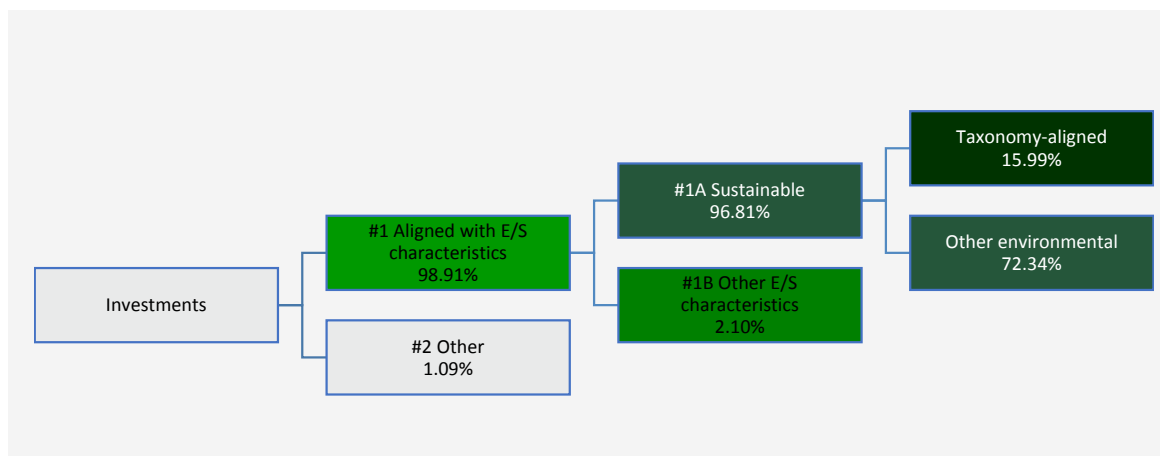

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

During the Reference Period, by applying the investment strategy, the Sub-fund invested a minimum of 98.91% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S characteristics”).

The Sub-fund invested at least 96.81% of its assets in sustainable investments with environmental or social objectives (in the table referred to as “#1A Sustainable”).

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Real estate activities	Real estate activities	92.55
Financial and insurance activities	Financial service activities, except insurance and pension funding	3.22
Accommodation and food service activities	Accommodation	3.15
Derivatives	Derivatives	0.00
Liquidity	Liquidity	1.09

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 15.99% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 17.01% of investments contributed to climate change mitigation;
- 1.49% of investments contributed to climate change adaptation;
- 0% of investments contributed to the sustainable use and protection of water and marine resources,
- 0% of investments contributed to the transition to a circular economy;
- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

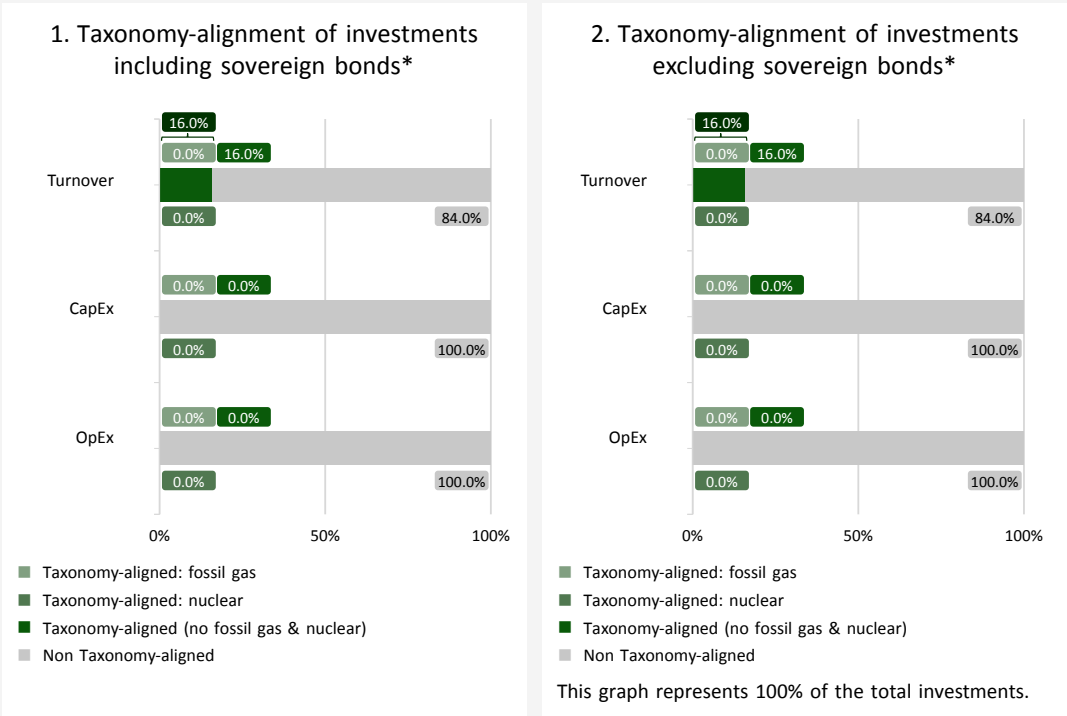

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Transitional activities: 0.07%
Enabling activities: 0.54%

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	16.04%
1 January 2023 - 31 December 2023	15.67%
1 January 2024 - 31 December 2024	15.99%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This Sub-fund does not seek to make sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. As at 31/12/2024, however, 72.34% is indicated in the section "What was the asset allocation".

Are sustainable investments with an environmental objective that do **not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 0% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education, peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.09% in liquid assets. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

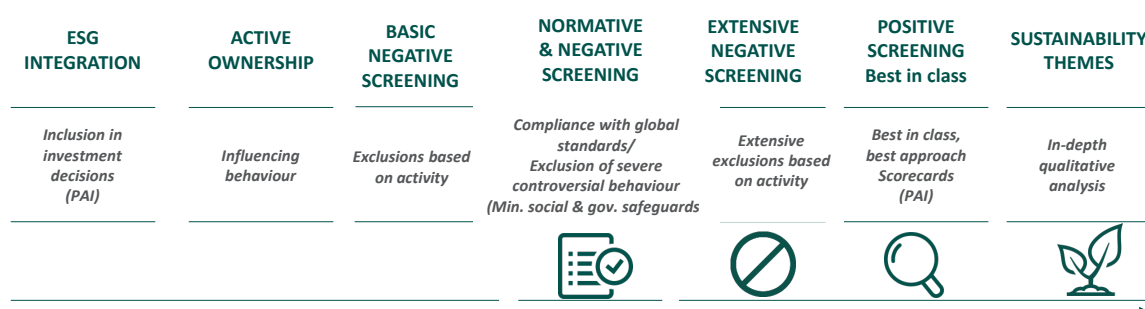

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

DPAM supplemented the various ESG exclusion filters using ESG risk and opportunities scorecards for each issuer in the portfolio. The scorecards were updated on an annual basis or ad hoc if an event should require a revision of the issuer's scorecard.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN Sustainable Development Goals.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable
- **How did this financial product perform compared with the broad market index?**
Not applicable

25. INFORMATION ABOUT THE SUBFUND DPAM B BONDS EUR GOVERNMENT MEDIUM TERM (FORMERLY DPAM B BONDS EUR MEDIUM TERM)

25.1. MANAGEMENT REPORT

25.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On 24 March 2022, the sub-fund received all the assets of the DPAM CAPITAL B Bonds EUR Medium Term sub-fund of the DPAM CAPITAL B SICAV. On 1 April 2022, the sub-fund was launched following the merger.

Subscription price during this period: the initial subscription price corresponds to the Net Asset Value of the shares of the DPAM CAPITAL B Bonds EUR Medium Term sub-fund of the DPAM CAPITAL B SICAV dated 1 April 2022.

25.1.2. Stock exchange listing

The shares of the sub-fund are not listed on an exchange.

25.1.3. Aim and main outlines of the investment policy

Objective

The objective is to obtain the highest overall return possible for its shareholders by investing mainly in bonds (with limitation as to sector) denominated in one or more European currencies and issued or guaranteed by investment grade entities.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

Investment policy

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

25.1.4. Index and benchmark

The sub-fund uses the following index as its benchmark: JPM EMU Government Investment Grade 1-10 years.

This index is a bond index representing bonds issued by the governments of European countries where the euro is the official currency, rated "investment grade" by each of the three major rating agencies (Standard & Poor's, Moody's and Fitch). The performance is calculated by reinvesting the coupons paid by the debt securities included in the index. The index contains bonds with a residual maturity between a minimum of 1 year and a maximum of 10 years.

J.P. Morgan Securities PLC is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance. The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the sub-fund. Please refer to the "Investment strategy" section in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

Bonds EUR Government Medium Term (formerly Bonds EUR Medium Term)

The composition and value of the benchmark, if any, can be found at <https://www.funds.dpaminvestments.com/funds.html>.

25.1.5. Policy followed during the year

At the end of 2023, we were of the view that Europe was entering a recession, based on numerous red flags appearing across the European economy. However, 2024 turned out to be different, as against expectations, the European economy was able to stand its ground with low, but still positive real GDP growth. At the same time, though the year, inflation continued decreasing towards the ECB's target.

Consequently, based on our views, we held an overweight duration stance throughout the year. The interest rate on the German 10Y government bond started the year around 2% and ended the year higher at 2.40%.

We were however able to limit the negative contribution of our duration overweight by tactically increasing and decreasing duration based on an improved or diminished attractiveness of interest rates. More specifically, a 10Y German bund around 2% was becoming less attractive while a level around 2.50% appeared as clear value.

Additionally, as we believed the ECB should have cut more than it did, we were heavily positioned for a steepening of interest rate curves. Although they eventually did steepen more or less in line with expectations, it took longer than we expected.

Finally, as we stated last year, country allocations will become an even more important source of relative performance as the absence of the ECB in government bond markets makes country selection of the upmost importance. As we have been able to pick the right countries at the right time, we were able to significantly profit from this. Especially our allocations towards France, Romania, Germany, and Slovakia have added significant relative performance.

25.1.6. Future policy

Although the downward move in European government bond yields has been postponed versus our expectations a year ago, this does not mean the more structural move down is cancelled.

As Europe continues to remain in a stagflationary environment, where real GDP growth is below potential and inflation relatively in line with target, the ECB will have to continue lowering its policy rate. Consequently, market interest rates should also continue moving lower.

Although we agree that a Trump policy might be inflationary, we believe the effects will be more felt from a US perspective. Depending on the actual mix of the Trump policies and the consequent reaction of European leaders, this can also have more or less important effects on Europe. Independent of the size of these effects, we believe they will be negative for both growth and inflation.

Tariffs will make it even more difficult for the European economy to grow through trade and will as such push real growth lower. But especially the significant increase in tariffs on Chinese goods will lead to a further dumping towards other markets. Europe will again be on the receiving end and will as such import Chinese deflation with negative effects on European inflation.

As has been the case since the end of the ECB's bond purchasing programs since 2022, country selection will remain an important driver of relative performance. This as markets will have to continue focusing on country fundamentals in the absence of the ECB as a price-insensitive buyer. Especially our allocation towards France will be an important one given our current significant underweight. Over the coming months we will have to reassess our position there from a carry perspective given current spread levels, and not from improving risk premia.

25.1.7. Summary risk indicator

The summary risk indicator gives an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 3

25.5. GEOGRAPHIC ALLOCATION OF INVESTMENTS

By country	% Portfolio
GERMANY (FEDERAL REPUBLIC)	20.01%
SPAIN	17.97%
ITALY	17.07%
FRANCE	8.84%
AUSTRIA	7.51%
NETHERLANDS	5.80%
FINLAND	5.07%
SLOVAKIA (SLOVAK REPUBLIC)	4.10%
LUXEMBOURG (GRAND DUCHY)	3.27%
BELGIUM	3.22%
IRELAND	3.13%
PORTUGAL	2.14%
ROMANIA	1.50%
POLAND (REPUBLIC)	0.37%
Total	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

25.6. ECONOMIC ALLOCATION OF INVESTMENTS

By sector	% Portfolio
STATES	90.50%
BANKS	4.65%
EUROPEAN ORGANIZATIONS	2.75%
PROVINCE	1.88%
ROAD VEHICLES	0.22%
TOTAL	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

25.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	21,706,046.70	64,305,972.10	86,012,018.80
Sales	29,763,021.32	84,884,841.88	114,647,863.20
Total 1	51,469,068.02	149,190,813.98	200,659,882.00
Subscriptions	7,148,485.23	45,050,589.31	52,199,074.54
Redemptions	17,038,391.91	67,699,373.63	84,737,765.54
Total 2	24,186,877.14	112,749,962.94	136,936,840.08
Reference average of the total net asset	134,804,351.19	122,484,640.63	128,610,835.50
Rotation Percentage	20.24%	29.75%	49.55%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

On the date of publication of this report, the net asset value per share is published on the following websites: <https://www.funds.dpaminvestments.com/funds.html> and www.beama.be. This information is also available at the counters of the financial services department.

25.10. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B (Cap)

Annual return:

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark. The benchmark is used to compare performance.

Bonds EUR Government Medium Term (formerly Bonds EUR Medium Term)

Table of historical benchmark performance (actuarial returns):

The sub fund uses the following index as its benchmark: JPM EMU Government Investment Grade 1-10 years.

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
JPM EMU Government Investment Grade 1-10 years	2.42 % (in EUR)	-1.33 % (in EUR)	-0.70 % (in EUR)	0.37 % (in EUR)	29/09/1992	

Class A (Dis)

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class A (Dis)	2.31 % (in EUR)	-1.03 % (in EUR)	-0.62 % (in EUR)	0.27 % (in EUR)	27/12/2013	1.05 % (in EUR)

Class B (Cap)

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class B (Cap)	2.37 % (in EUR)	-0.98 % (in EUR)	-0.58 % (in EUR)	0.28 % (in EUR)	29/09/1992	4.30 % (in EUR)

Class F (Cap)

Table showing historical performance (actuarial returns):

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

25.12.3. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.
- excluding countries that do not respect a minimum of democratic requirements.
- by systematically applying a policy for impact bonds (such as green and social bonds).

Derivative products, if any, used for the purpose of achieving the investment objectives of the sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

● How did the sustainability indicators perform?

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

● For investments in corporate bonds:

- The Sub-fund has not been exposed to companies considered to be below Global Standards;

b. The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

c. The Sub-fund has not been exposed to companies facing the most serious ESG controversies around environmental or social issues.

• **For investments in sovereign bonds:**

a. The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.

b. The percentage of impact bonds ("Green, Social & Sustainability bonds") in the portfolio was higher than the benchmark.

Over the Reference Period, the percentage of impact bonds ("Green, Social & Sustainability bonds") in the portfolio was 6.21% while the benchmark was 1.49%.

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	98.69%	98.03%	99.52%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Failure to respect the democratic minimum	No exposure	No exposure	No exposure
Impact bonds	Sub-fund: 4.7% Benchmark: 0%	Sub-fund: 8.55% Benchmark: 1.29%	Sub-fund: 6.21% Benchmark: 1.49%

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

For investments in corporate bonds:

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments are directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

• **For investments in sovereign bonds:**

During the Reference Period, the Sub-fund took into consideration the environmental and social PAIs listed in table 1 of appendix I of the Delegated Regulation (EU) 2022/1288.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that DPAM developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries. The results of the country sustainability scores were discussed with the countries concerned according to DPAM's Engagement Policy, which is available at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>.

The second PAI relates to social issues and focuses on issues of social breaches. Countries that have not met the minimum democratic requirements have been excluded. The country's sustainability model observes several indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to major labour conventions, the issue of equal opportunity and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other issuing countries.

During the Reference Period, the management teams have engaged in a dialogue on the results of the sustainability scores with certain countries according to DPAM's Engagement Policy (accessible via the link <https://www.dpaminvestments.com/documents/engagement-policy-enBE>).

Over the Reference Period, the management teams conducted a certain number of dialogues with the various participants in sovereign debt issues. These dialogues allowed us to verify with the stakeholders the points of attention of the governmental policies, notably in environmental and/or social matters.

Details of the dialogues with countries and companies will be published in an annual report in the first quarter of 2025 on the DPAM website (<https://www.dpaminvestments.com>).

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

What was the asset allocation?

Through the application of the investment strategy described above, the Sub-fund has invested 99.52% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S Characteristics").

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Public administration	Public administration and defence; compulsory social security	91.96
Financial and insurance activities	Financial service activities, except insurance and pension funding	4.62
Activities of extraterritorial organisations and bodies	Activities of extraterritorial organisations and bodies	2.72
Construction	Civil engineering	0.22
Derivatives	Derivatives	0.19

Sector	Sub-sector	% Assets
Liquidity	Liquidity	0.29

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☐ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

Not applicable

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**
Not applicable

- What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**
Not applicable

Are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- What was the share of socially sustainable investments?**
Not applicable

- What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**
Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:
 - Liquid assets
 - Derivative instruments
 - Collective investment schemes
 - Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.
Over the Reference Period, for the purposes of achieving its investment objectives, portfolio diversification, liquidity management and/or risk hedging, the Sub-fund was exposed to 0.29% in liquid assets and 0.19% in derivatives. There are no minimum environmental or social guarantees on this allocation.

- What actions have been taken to meet the environmental and/or social characteristics during the reference period?**
For investments in shares or corporate bonds:
On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

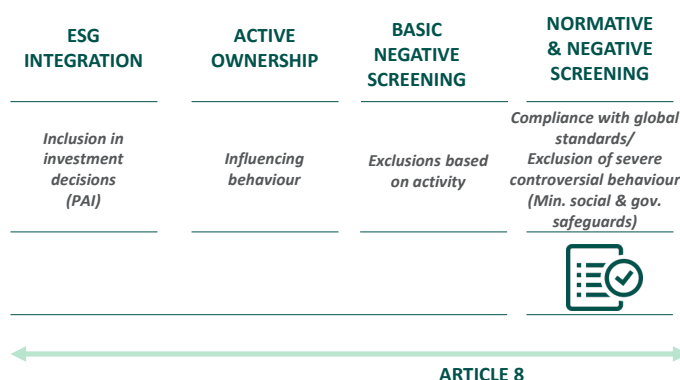

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

For investments in sovereign bonds:

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime"). The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

How did this financial product perform compared with the reference benchmark?

Not applicable

● How does the reference benchmark differ from a broad market index?

Not applicable

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable

● How did this financial product perform compared with the reference benchmark?

Not applicable

● How did this financial product perform compared with the broad market index?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

26. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES US DIVIDEND SUSTAINABLE
--

26.1. MANAGEMENT REPORT

26.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On 24 March 2022, the sub fund received the entire assets of the sub fund DPAM CAPITAL B Equities US Dividend Sustainable de la sicav DPAM CAPITAL B. On 1 April 2022, the sub fund was launched following the takeover effect of the merger.

Subscription price during this period: The initial subscription price corresponds to the Net Asset Value shares of the sub fund DPAM CAPITAL B Equities US Dividend Sustainable of the SICAV DPAM CAPITAL B dated of 1 April 2022

26.1.2. Stock exchange listing

The shares of the sub-fund are not listed on an exchange.

26.1.3. Aim and main outlines of the investment policy

Objective

The objective of the sub-fund is to provide the shareholders with as high a global return as possible. The sub-fund invests in American listed equities as well as any security giving entitlement to the capital of these companies, selected on the basis of compliance with environmental, social and governance (ESG) criteria.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

The risks are widely spread, among others by a broad sector diversification. The allocation of the portfolio will change depending on the assessment of the macroeconomic outlook and the situation on the financial markets. The sub-fund can for example prefer or avoid certain sectors or investment styles based among others on the economic outlook.

At least 50% of the portfolio must be composed of equities and other securities referred to above generating a higher actual or expected dividend yield than the market average.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

Investment policy

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

26.1.4. Index and benchmark

The sub-fund uses the following index as its benchmark: MSCI USA Net Return.

This index is representative of the large- and mid-cap equity market of developed countries (as defined by MSCI and mainly based on the country of incorporation and the country of primary listing of its securities) in the United States. The performance of this index is calculated by reinvesting net dividends (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance. The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the sub-fund. Please refer to the "Investment strategy" section above for an explanation of how the sub-fund promotes environmental and social characteristics.

The composition and value of the benchmark, if any, can be found at <https://www.funds.dpaminvestments.com/funds.html>.

26.1.5. Policy followed during the year

DPAM B Equities US Dividend Sustainable is an equity fund that invests exclusively in US dividend-paying and publicly traded companies. The objective of the strategy is to invest in high quality companies with a strong dividend profile, together with a solid balance-sheet and cash flow generation to maintain and grow the dividend over time.

The fund is diversified and invests across most sectors, with the exception of the energy sector, which is excluded due to ESG reasons. Some other industries (such as tobacco, gambling etc.) are also excluded for the same reasons. The fund has a quantitative best-in-class ESG screening based on third-party data and integrates ESG elements all along the investment process. Stock selection is based on a qualitative fundamental analysis integrating elements such as competitive position, balance sheet quality and cash flow generation, complemented with quantitative elements.

In 2024, we continued to build on our dividend growth and sustainable approach, integrating 10 new investment ideas in the fund.

In an environment again driven by enthusiasm around large technology companies, the fund remained resilient over the year with positive contributions coming from our positions in financials such as American Express, JP Morgan, Morgan Stanley, Nasdaq, all driven by the resilience of the US economy and the enthusiasm around the elections of Pr. Donald Trump. The fund also benefited from its investments in Broadcom, Oracle, and Digital Realty Trust that continued to benefit from the transition to the cloud and the growing interest in AI.

Other names worth being mentioned are industrial companies like Eaton, Trane or Comfort Systems that performed well during the year, supported by the reshoring and electrification trends in which they are well positioned to continue to lead in the coming years.

The fund main relative detractors were principally large non-dividend paying technology companies such as Nvidia (large impact), Amazon, Tesla which can't be invested due to our dividend constraints.

26.1.6. Future policy

For the coming year, we expect to continue building on our dividend growth approach, while keeping high sustainable standards in our stock selection.

We will continue to look for companies with high financial standards, strong cash-flow generation, and solid balance sheet, while preserving our diversified positioning and conviction-based portfolio construction.

We will also continue the work on the sustainable profile of the fund with continuous monitoring of the positions but also with engagements with the companies on environmental, social and governance topics and by investing in companies contributing positively to the society.

26.1.7. Summary risk indicator

The summary risk indicator gives an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and Reward Profile : 4.

TOTAL	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

26.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	25,756,806.51	59,707,201.39	85,464,007.90
Sales	230,272,687.18	175,831,386.36	406,104,073.54
Total 1	256,029,493.69	235,538,587.75	491,568,081.44
Subscriptions	27,268,561.85	30,797,532.36	58,066,094.21
Redemptions	236,270,973.78	149,440,589.28	385,711,563.06
Total 2	263,539,535.63	180,238,121.64	443,777,657.27
Reference average of the total net asset	523,519,911.92	387,943,474.67	455,361,265.87
Rotation Percentage	-1.43%	14.25%	10.50%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

26.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

26.11.2. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

26.11.3. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 73.57% of sustainable investments <div style="margin-left: 20px;"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 20px;"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 20px;"> <input checked="" type="checkbox"/> with a social objective </div> <input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

● How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a. The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- b. The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);
- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;

d. The Sub-fund had a better weighted average ESG profile than its benchmark, calculated over a rolling three-year period: 56.35 compared to 53.32 (as at 31/12/2024).

e. The average weighted greenhouse gas (GHG) emissions intensity of the Sub-fund was below the average weighted greenhouse gas (GHG) emissions intensity of the benchmark, calculated over a rolling three-year period: 1126.38 tCO₂e/mn revenue compared to 1179.06 tCO₂e/mn revenue (as at 31/12/2024).

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments. The objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest (a) in companies whose core business is the development of products and services that contribute to the achievement of the 17 environmental or social Sustainable Development Goals ("SDGs"), as defined by the United Nations (UN) (e.g. health products and services, education-related services, water saving and access solutions, energy efficiency solutions, digitalisation-enabling services, sustainable mobility services, etc.) via:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);
- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs; and
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to all the SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

For the Reference Period, the Sub-fund had 73.57% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 3% of the Sub-fund's portfolio contributed to the achievement of one or more of the environmental objectives defined by the EU;
- 47.96% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy through investments in companies aiming to make a net positive contribution to the environmental SDGs;
- 21.29% of the Sub-fund's portfolio contributed to the achievement of social objectives through investments in companies aiming to make a net positive contribution to the social SDGs; and
- 68.93% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to all the SDGs.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:

o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);

via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs. During the Reference Period, 68.93% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines

on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their best-in-class ranking.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-d-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
MICROSOFT	Information and communication	8.01	United States of America
APPLE	Manufacturing	7.75	United States of America
BROADCOM INC	Manufacturing	4.41	United States of America
ELI LILLY & CO	Manufacturing	3.04	United States of America
JP MORGAN CHASE	Financial and insurance activities	2.90	United States of America
AMERICAN EXPRESS	Financial and insurance activities	2.26	United States of America
ORACLE CORP	Information and communication	2.13	United States of America
UNITEDHEALTH GROUP	Financial and insurance activities	1.99	United States of America
SALESFORCE.COM, INC.	Information and communication	1.95	United States of America
PROCTER & GAMBLE	Manufacturing	1.87	United States of America
WAL-MART STORES	Wholesale and retail trade; repair of motor vehicles and motorcycles	1.84	United States of America
TJX COMPANIES	Wholesale and retail trade; repair of motor vehicles and motorcycles	1.80	United States of America
CISCO SYSTEMS	Manufacturing	1.67	United States of America
MORGAN STANLEY	Financial and insurance activities	1.62	United States of America
NASDAQ OMX GROUP, INC.	Financial and insurance activities	1.60	United States of America

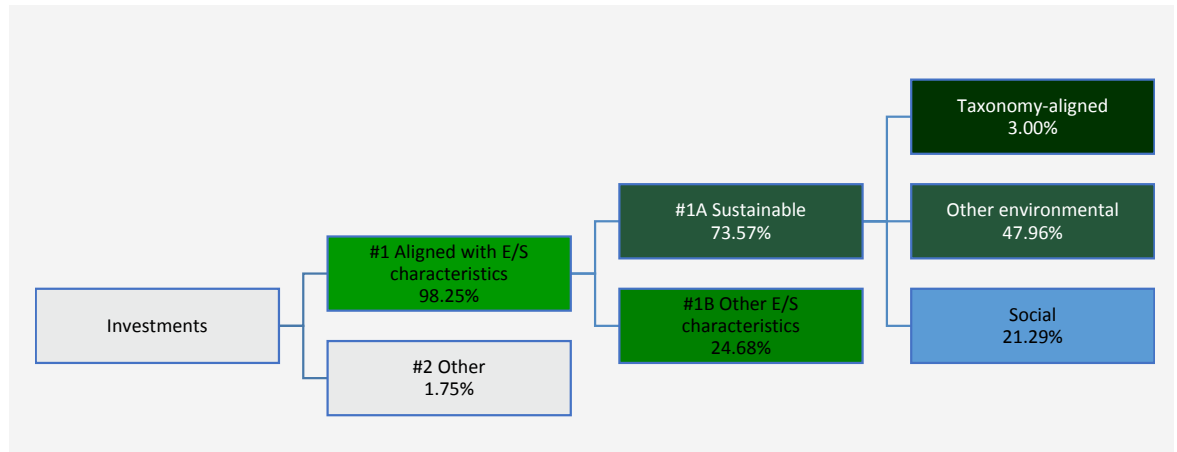

What was the proportion of sustainability-related investments?

What was the asset allocation?

By applying the investment strategy described above, the Sub-fund invests a minimum of 98.25% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S characteristics”).

The Sub-fund invested at least 73.57% of its assets in sustainable investments with environmental or social objectives (in the table referred to as “#1A Sustainable”).

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of computer, electronic and optical products	18.38
Information and communication	Publishing activities	13.52
Financial and insurance activities	Financial service activities, except insurance and pension funding	8.12
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	8.11
Wholesale and retail trade; repair of motor vehicles and motorcycles	Retail trade, except of motor vehicles and motorcycles	6.27
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	5.74
Manufacturing	Manufacture of chemicals and chemical products	5.56
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	5.50

Sector	Sub-sector	% Assets
Manufacturing	Manufacture of machinery and equipment n.e.c.	4.18
Manufacturing	Other manufacturing	2.83
Electricity, gas, steam and air conditioning supply	Electricity, gas, steam and air conditioning supply	2.60
Real estate activities	Real estate activities	2.23
Information and communication	Computer programming, consultancy and related activities	1.94
Information and communication	Motion picture, video and sound production and distribution	1.57
Manufacturing	Manufacture of electrical equipment	1.53
Administrative and support service activities	Office administrative, office support and other business support activities	1.49
Water supply; sewerage; waste management and remediation activities	Remediation activities and other waste management services	1.31
Construction	Specialised construction activities	1.27
Accommodation and food service activities	Accommodation	1.26
Manufacturing	Manufacture of other non-metallic mineral products	1.16
Information and communication	Programming and broadcasting activities	0.97
Manufacturing	Manufacture of paper and paper products	0.77
Manufacturing	Manufacture of food products	0.75
Water supply; sewerage; waste management and remediation activities	Water collection, treatment and supply	0.64
Transportation and storage	Postal and courier activities	0.58
Liquidity	Liquid assets	1.75

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 3% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 0% of investments contributed to climate change mitigation;
- 0% of investments contributed to climate change adaptation;
- 0% of investments contributed to the sustainable use and protection of water and marine resources,
- 0% of investments contributed to the transition to a circular economy;
- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Transitional activities: 0%
Enabling activities: 0%

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	1.33%
1 January 2023 - 31 December 2023	1.26%
1 January 2024 - 31 December 2024	3.00%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 47.96% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

A sustainable investment is considered to have an environmental objective aligned with the EU Taxonomy if the issuer's eligible activities reach a 10% threshold of alignment with EU Regulation 2020/852 (Taxonomy Regulation). If the issuer's eligible economic activities do not reach the 10% threshold of alignment with the Taxonomy Regulation or if the issuer's economic activities are not covered by the Taxonomy Regulation, DPAM has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives.

This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to environmental objectives.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 21.29% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education, peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.75% in liquid assets. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

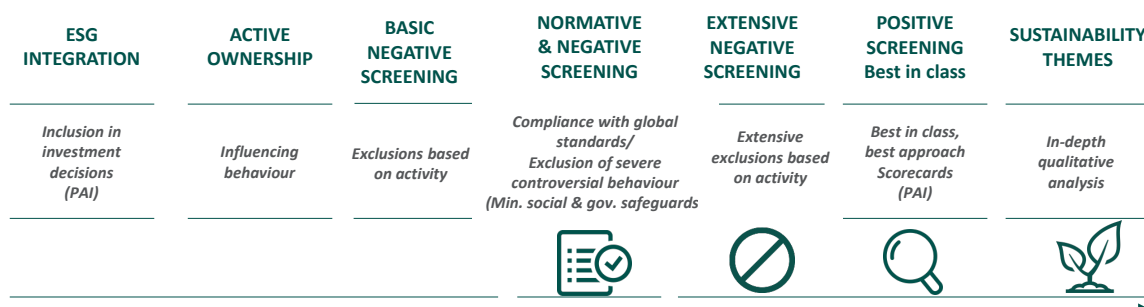

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

Subsequently, on a semi-annual basis, the resulting universe was subject to a "best-in-class" ranking in order to retain only the best ESG profiles of companies on a list of securities eligible for management (25% of the lowest scores were removed from the eligible list by sector).

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN SDGs.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable

- **How did this financial product perform compared with the broad market index?**

Not applicable

27. INFORMATION ABOUT THE SUBFUND DPAM B REAL ESTATE EMU SUSTAINABLE

27.1. MANAGEMENT REPORT

27.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On 24 March 2022, the sub-fund received all the assets of the DPAM CAPITAL B Real Estate EMU sub-fund of the DPAM CAPITAL B SICAV. On 1 April 2022, the sub-fund was launched following the merger.

Subscription price during this period: the initial subscription price corresponds to the Net Asset Value of the shares of the DPAM CAPITAL B Real Estate EMU Sustainable sub-fund of the DPAM CAPITAL B SICAV dated 1 April 2022.

27.1.2. Stock exchange listing

The shares of the sub-fund are not listed on an exchange

27.1.3. Aim and main outlines of the investment policy

Objective

The objective is to provide its shareholders with the highest possible overall return over the long term, with a focus on representative investments in the real estate sector in the euro zone. The sub-fund will not invest more than 40% of its assets in receivables of any kind. The companies in which the sub-fund invests are selected on the basis of compliance with environmental, social and governance (ESG) criteria.

The sub-fund uses a rigorous ESG methodology and strict exclusions in order not to undermine other environmental and social objectives and to ensure the required good governance practices.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

The sub-fund will not invest more than 10% of its assets in other units for collective investment.

Investment policy

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

27.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: FTSE EPRA/NAREIT Eurozone Capped Net Return index.

This index is representative of the market for listed real estate companies in developed countries (as defined in the index methodology) in the EMU zone.

The performance of this index is calculated by reinvesting net dividends (Net Return).

FTSE International Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance and to select a large proportion of the securities in the portfolio.

The benchmark is not aligned with the promotion of the environmental and social characteristics of the sub-fund. Please refer to the "Investment Strategy" section in the prospectus for an explanation of how the sub-fund promotes environmental and social characteristics.

The composition and value of the benchmark, if any, can be found at <https://www.funds.dpaminvestments.com/funds.html>.

27.1.5. Policy followed during the year

2024 was marked by high volatility in interest rates, with macroeconomic and geopolitical factors significantly influencing the fund's strategy. The year began on a negative note with rising long-term interest rates. However, from June to December, the Euro 5-year swap rate decreased by nearly 1%, aiding market recovery. The second half of the year experienced heightened political tensions in France and Germany, the election of Trump in the US, and the extension of conflicts in Ukraine and Israel.

In the physical real estate market, property values continued to decline, though this was partly cushioned by rising rent levels and the decline was materially lower than in 2023. Many properties have reached their lowest valuation points towards the end of 2024. Depending on the type and size of assets, the investment market began to reopen slowly but steadily.

In the listed space, property companies continued their deleveraging strategies through asset disposals, dividend cuts, or equity injections.

The growth prospects in the US following Trump's election, coupled with renewed fear of higher inflation and higher interest rates and with European political tensions and conflicts, led investors to shy away from some Eurozone stock markets. The year-end saw a sell-off across all listed real estate sub-sectors, bringing the total return of the Eurozone listed real estate sector to approximately -2.6% for the year.

In this macroeconomic context, the fund increased its exposure to the residential subsector throughout the year while reducing its exposure to logistics and retail.

27.1.6. Future policy

For 2025, the further expected downwards rate path of the European Central Bank and a normalized financing environment, which is also due to affordable credit spreads, should increase transaction volumes in the investment market. This should set clearance prices for assets between equity rich buyers and equity poor and motivated sellers leading to a normalized real estate market.

Our strategy moving forward will depend on the outlook for companies in this volatile environment. We will continue to maintain a balanced portfolio. On one hand, we will focus on companies with strong balance sheets, robust growth prospects and a good earnings visibility. On the other hand, we will also consider companies that are currently challenged but have management teams capable of improving earnings and visibility. These companies trade at a significant discount, offering potential upside to their share prices.

The investment themes for the first half of 2025 are:

- Companies with strong balance sheets holding quality assets, as opposed to those with excessive leverage.
- Companies operating in subsectors with supply shortages and higher rents, rather than those with oversupply and lower rent growth.
- Companies with strong ESG profiles.
- Shares in companies that offer a higher dividend and lower beta compared to the benchmark of the fund.
- A focus on total return, combining sustainable dividends and capital appreciation from rental growth.
- Emphasis on long leases and quality tenants with competitive advantages to strengthen cash flows.
- In a highly volatile environment, capitalizing on excessive market movements by rebuilding positions in strong companies that have been excessively penalized, and vice versa.
- Companies that are clearly undervalued compared to industry peers

27.1.7. Summary risk indicator

The summary risk indicator gives an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 5

27.2. BALANCE SHEET

		31 December 2024 EUR	31 December 2023 EUR
Section 1: Balance Sheet

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

27.6. ECONOMIC ALLOCATION OF INVESTMENTS

By sector	% Portfolio
REAL ESTATE	91.70%
FINANCIAL SERVICES - HOLDINGS	4.17%
OTHER SERVICES	4.13%
TOTAL	100.00%

These allocations of assets were established on basis of data (gross) used by the entity responsible for the administration and bookkeeping and do not reflect inevitably the economic analysis which directed the assets selection.

27.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	25,257,051.60	22,622,032.44	47,879,084.04
Sales	29,174,519.57	28,174,314.72	57,348,834.29
Total 1	54,431,571.17	50,796,347.16	105,227,918.33
Subscriptions	18,892,117.32	15,081,496.02	33,973,613.34
Redemptions	26,542,798.48	20,474,675.33	47,017,473.81
Total 2	45,434,915.80	35,556,171.35	80,991,087.15
Reference average of the total net asset	108,634,685.05	119,409,553.92	114,051,559.02
Rotation Percentage	8.28%	12.76%	21.25%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

On the date of publication of this report, the net asset value per share is published on the following websites: <https://www.funds.dpaminvestments.com/funds.html> and www.beama.be. This information is also available at the counters of the financial services department.

27.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B (Cap)

Annual return:

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark. The benchmark is used to compare performance.

Table of historical benchmark performance (actuarial returns):

The sub fund uses the following index as its benchmark: FTSE EPRA/NAREIT Eurozone Capped Net Return index

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
FTSE EPRA/NAREIT Eurozone Capped Net Return index	-2.61 % (in EUR)	-8.84 % (in EUR)	-6.40 % (in EUR)	1.50 % (in EUR)	07/10/1999	4.63 % (in EUR)

Class A (Dis)

Table showing historical performance (actuarial returns):

	Average cumulated returns				Since	
	1 year	3 year	5 year	10 year	Year	Value
Class A (Dis)	-2.60 % (in EUR)	-8.04 % (in EUR)	-5.70 % (in EUR)		10/10/2016	-0.18 % (in EUR)

Class B (Cap)

Table showing historical performance (actuarial returns):

27.10. CHARGES

Recurring costs

Class A (Dis) - BE6289023283:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	1.83 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.31 %

Class B (Cap) - BE6271654228:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	1.80 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.31 %

Class F (Cap) - BE6271655233:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.95 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.31 %

Class N (Cap) - BE6299325488:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.96 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.31 %

Class P (Cap) - BE6289025304:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.14 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.31 %

Class W (Cap) - BE6289027326:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.94 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.31 %

Fee sharing

As at 31 December 2024, 52.02% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroef Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroef Petercam or one of its subsidiaries are distributors in the same way as external distributors.

2023	class A 1.86 EUR class M 1.90 EUR

27.11.2. Investment restrictions and overruns

Between NAV Dates 21/03/2024 and 22/03/2024, a legal overrun was opened in the sub fund DPAM B Real Estate EMU Sustainable. Indeed, as a result of a subscription, the sum of the issuers representing more than 5% each represented more than 40% of the total net assets of the fund. The total weight attributed to 47.270%. And the fund held more than a maximum of 10% in a single issuer, 10.21% in Unibail Rodamco Westfield and 10.15% in Vonovia SE. The breach was caused by an entry into the fund which is reflected in T +1 in the NAV and the subsequent purchase transactions which have been reflected in T in the NAV. Both entry and purchase transactions followed the correct accounting rules and standards and the breach was therefore inevitable and caused by accounting practices.

Between NAV Dates 26/03/2024 and 27/03/2024, a legal overrun was opened in the sub fund DPAM B Real Estate EMU Sustainable. Indeed, as a result of a subscription, the sum of the issuers representing more than 5% each represented more than 40% of the total net assets of the fund. The total weight attributed to 41.286%. The breach was caused by an entry into the fund which is reflected in T +1 in the NAV and the subsequent purchase transactions which have been reflected in T in the NAV. Both entry and purchase transactions followed the correct accounting rules and standards and the breach was therefore inevitable and caused by accounting practices.

Between NAV Dates 14/05/2024 and 15/05/2024, a legal liability overrun was opened in the sub fund DPAM B Real Estate EMU Sustainable. Indeed, as a result of a subscription, the sum of the issuers representing more than 5% each represented more than 40% of the TNA of the fund. The total weight attributed to 42.854%. The breach was caused by market fluctuations.

Between the NAV Dates of 27/05/2024 and 28/05/2024, a legal active violation was opened in the sub fund DPAM B Real Estate EMU Sustainable. Indeed, the sum of issuers representing more than 5% each represented more than 40% of the fund's TNA. The total weight attributed to 42.981%. The breach was mainly caused by a corporate action for COVIVIO SA which resulted in the receipt of a dividend in shares on the NAV date 27/05/2024 increasing the weight of this issuer beyond the 5% limit. The portfolio manager should have anticipated the overrun as it was predictable with the NAV data as of 24/05/2024.

Between NAV Dates 09/10/2024 and 10/10/2024 a legal technical breach was open in the DPAM B Real Estate EMU Sustainable subfund. Indeed, due to a subscription the sum of issuers representing more than 5% each represented more than 40% of the fund's TNA. The total weight attributed to 41.469%. The breach was caused by an inflow in the fund which is reflected on T +1 in the NAV and the purchase transactions following the inflow that were reflected on T in the NAV. Both the inflow and purchase transactions followed the correct accounting rules and standards and therefore the breach was unavoidable and caused by accounting practices.

Following the winding up of the data provider on which DPAM relied for SDG alignment data, DPAM had to switch from data provider for SDG related data. SDG alignment is used as input for the calculation of minimum investment in assets having an environmental, social and sustainable investment objective. The DPAM B Real Estate EMU Sustainable fund takes the commitment to invest at least 20% of their assets in investments with a social objective according to the waterfall methodology. Following the change of data provider on SDG alignment, a breach was noticed between NAV dates 17/05/2024 and 31/12/2024. On NAV date 17/05/2024, those assets represented 0% of the fund's NAV. The breach was closed after an adaptation of the fund's prospectus.

27.11.3. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

27.11.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

Product name:
DPAM B REAL ESTATE EMU SUSTAINABLE

Legal entity identifier:
549300L2M0EZ0L2I9H08

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> Yes		<input checked="" type="radio"/> <input type="radio"/> No	
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____%	<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 96.68% of sustainable investments	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%		<input type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments	

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

During the Reference Period, derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund were not used for the purpose of promoting environmental and/or social characteristics.

● How did the sustainability indicators perform?

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. The Sub-fund has no exposure to issuers whose ESG score resulting from the manager's proprietary "scorecard ESG" rating model is below two out of five;
- e. As at 31 December 2024, the proportion of issuers with Science Based Targets initiative (SBTi) or equivalent in the Sub-fund's portfolio was 74.63% (by weight of portfolio assets). The target is to reach at least 50% by 2026.

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	98.25%	100.02%	99.75%
Sustainable Investment	95.83%	97.72%	96.68%
Other Environmental Investments	0.00%	9.06%	72.83%
Social	48.64%	34.57%	0.00%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	No exposure	No exposure	No exposure
Sustainability indicator e.	Sub-fund: 57.1	Sub-fund: 62.28	Sub-fund: 74.63

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments. The objectives of the sustainable investments that the Sub-fund intended to partially achieve were to invest (a) in companies whose core business is the development of products and services that contribute to the achievement of the 17 environmental or social Sustainable Development Goals ("SDGs"), as defined by the United Nations (UN) (e.g. health products and services, education-related services, water saving and access solutions, energy efficiency solutions, digitalisation-enabling services, sustainable mobility services, etc.) via:

- companies aligned with one or more of the six objectives of the EU Taxonomy (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems);
- companies aiming to make a net positive contribution to the United Nations (UN) SDGs, which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs; and
- at the overall portfolio level, a minimum of 20% aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive* contribution to all the SDGs.

* The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the adverse impacts of their activities along the value chain.

For the Reference Period, the Sub-fund had 96.68% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 15.8% of the Sub-fund's portfolio contributed to the achievement of one or more of the environmental objectives defined by the EU;
 - 72.83% of the Sub-fund's portfolio contributed to the achievement of one or more environmental objectives not aligned with the EU Taxonomy through investments in companies aiming to make a net positive contribution to the environmental SDGs.
 - 0% of the Sub-fund's portfolio contributed to the achievement of social objectives through investments in companies aiming to make a net positive contribution to the social SDGs.
 - 96.68% of the overall portfolio of the Sub-fund was invested in assets aligned with the EU Taxonomy, green bonds or recognised equivalents ("use-of-proceeds bonds") or making a net positive contribution to all the SDGs.
- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment, including:
 - o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);
 - via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>. The commitments made by DPAM are also the subject of an annual report available at (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).
- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of a minimum of 20% of assets aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs. During the Reference Period, 96.68% of assets were aligned with the EU Taxonomy invested in green bonds or recognised equivalents ("use-of-proceeds bonds") or invested in companies making a net positive contribution to all 17 SDGs.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcf-report-enBE>.

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

e) similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and voting over the Reference Period are available in the voting report (<https://www.dpaminvestments.com/documents/voting-activity-report-enBE>) and the engagement report (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

e) similarly, social indicators have been included in the analysis of the ESG profile of companies and impacted their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, or are available at <https://www.dpaminvestments.com/documents/sustainable-and-responsible-investments-policies-enBE> and <https://www.dpaminvestments.com/documents/tcfd-report-enBE>.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
UNIBAIL-RODAMCO	Real estate activities	9.51	France
VONOVIA	Real estate activities	9.41	Germany
LEG IMMOBILIEN	Real estate activities	8.72	Germany
GECINA	Real estate activities	6.11	France
TAG TEGERNSEE IMMOBILIER	Real estate activities	4.83	Germany
COVIVIO	Real estate activities	4.75	France
KLEPIERRE	Real estate activities	4.58	France
AEDIFICA	Real estate activities	4.31	Belgium
MERLIN PROPERTIES SOCIMI SA	Real estate activities	4.11	Spain
WAREHOUSES DE PAUW	Real estate activities	3.85	Belgium
COFINIMMO	Real estate activities	3.38	Belgium
XIOR STUDENT HOUSING	Accommodation and food service activities	3.32	Belgium
GRAND CITY PROPERTIES	Real estate activities	3.17	Germany
KOJAMO	Real estate activities	2.81	Finland
MERCIALYS	Real estate activities	2.58	France

What was the proportion of sustainability-related investments?

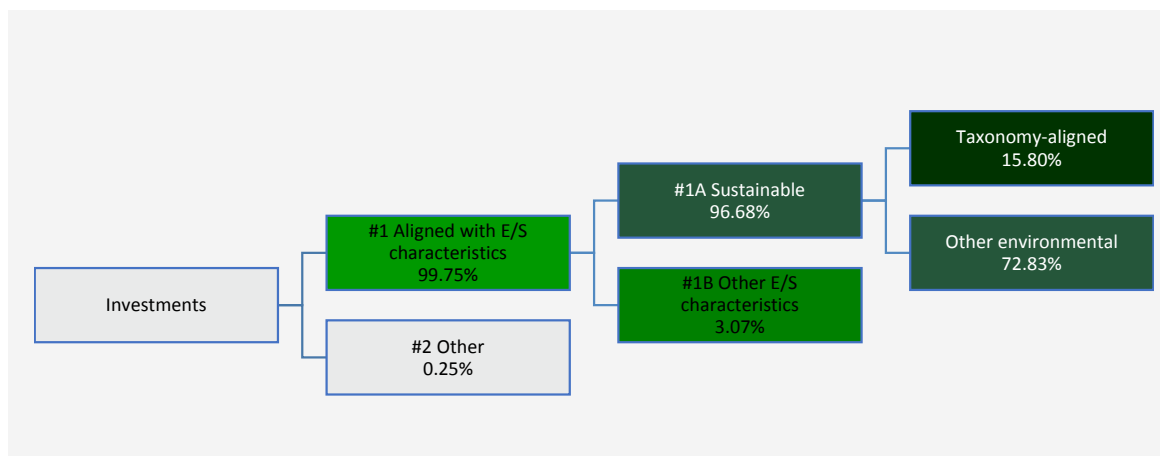

Asset allocation describes the share of investments in specific assets.

● What was the asset allocation?

During the Reference Period, by applying the investment strategy, the Sub-fund invested a minimum of 99.75% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S characteristics”).

The Sub-fund invested at least 96.68% of its assets in sustainable investments with environmental or social objectives (in the table referred to as “#1A Sustainable”).

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Real estate activities	Real estate activities	94.12
Accommodation and food service activities	Accommodation	3.32

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to one or more of the six environmental objectives (climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, and the protection and restoration of biodiversity and ecosystems) as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 15.8% with one or more of the six environmental objectives defined by the EU Taxonomy.

The proportion of investments allocated to each environmental objective to which these investments contributed is broken down as follows:

- 17.77% of investments contributed to climate change mitigation;
- 1.28% of investments contributed to climate change adaptation;
- 0% of investments contributed to the sustainable use and protection of water and marine resources,
- 0% of investments contributed to the transition to a circular economy;
- 0% of investments contributed to the pollution prevention and control;
- 0% of investments contributed to the protection and restoration of biodiversity and ecosystems.

This breakdown may differ from the total alignment with one or more of the six environmental objectives defined by the EU Taxonomy mentioned above due to the lack of data granularity at the level of each of the six objectives and the existence of a common framework between several objectives, which may lead to double counting.

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

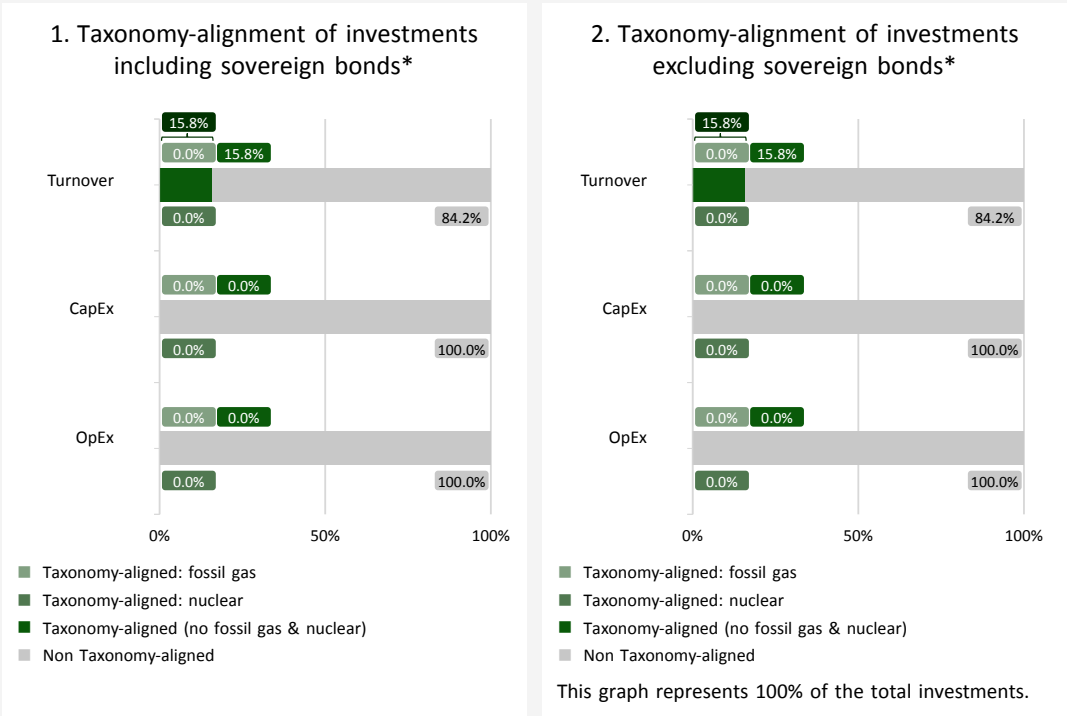

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Transitional activities: 0.05%

Enabling activities: 0.82%

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Reference period	EU Taxonomy-aligned investments
1 January 2022 - 31 December 2022	15.95%
1 January 2023 - 31 December 2023	15.53%
1 January 2024 - 31 December 2024	15.80%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This Sub-fund does not seek to make sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. As at 31/12/2024, however, 72.83% is indicated in the section "What was the asset allocation".

Are sustainable investments with an environmental objective that do **not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 0% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education, peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the United Nations SDGs that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

Further information on methodology and data resources is available in the information on this Sub-fund via <https://www.funds.dpaminvestments.com/funds.html> (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 0.25% in liquid assets. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

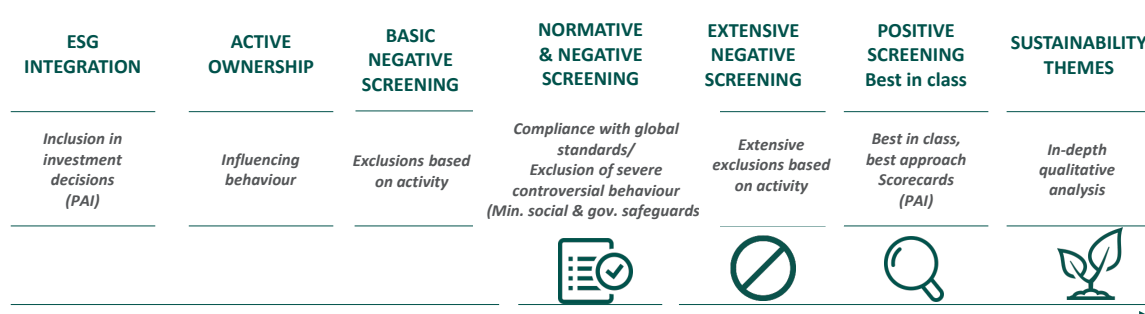

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

DPAM supplemented the various ESG exclusion filters using ESG risk and opportunities scorecards for each issuer in the portfolio. The scorecards were updated on an annual basis or ad hoc if an event should require a revision of the issuer's scorecard.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN Sustainable Development Goals.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable
- **How did this financial product perform compared with the broad market index?**
Not applicable

28. INFORMATION ABOUT THE SUBFUND DPAM B EQUITIES US SELECTION MSCI INDEX (FORMERLY DPAM B EQUITIES US ESG LEADERS INDEX)

28.1. MANAGEMENT REPORT

28.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On March 24, 2022, the sub-fund received all the assets of the DPAM CAPITAL B Real Estate EMU Sustainable subfund of the DPAM CAPITAL B SICAV. On 1 April 2022, the sub-fund was launched following the merger.

Subscription price during this period. Initial subscription price: The initial subscription price corresponds to the net asset value of the shares of the DPAM CAPITAL B Real Estate EMU Sustainable sub-fund of the DPAM CAPITAL B on 1 April 2022.

28.1.2. Stock exchange listing

The shares of the sub-fund are not listed on the stock exchange.

28.1.3. Aim and main outlines of the investment policy

Objective

The objective is to obtain the highest possible overall return for shareholders, with emphasis on investments in US equities.

The sub-fund is a tracker fund implementing a passive investment management strategy whose objective is to replicate physically and not synthetically the “Net Dividends Reinvested” performance of the MSCI USA Selection (formerly MSCI USA ESG Leaders Net Return) Index in Euro.

This is a passively managed sub-fund, which means that the portfolio manager's objective is to replicate the performance of a benchmark.

Investment policy

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

28.1.4. Index and benchmark

MSCI USA Selection Net Total Return (formerly MSCI USA ESG Leaders Net Return)

This benchmark is used in the management of the sub-fund.

Further information on the Index, its composition, calculation and the rules governing its periodic review and rebalancing, as well as on the general methodology of the MSCI indices, is available at www.msci.com.

The performance of the benchmark index is calculated with net dividends reinvested (Net Return).

MSCI Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The tracking error is around 1.5%.

The composition and value of the benchmark can be found on the website <https://www.funds.dpaminvestments.com/funds.html>.

Equities US Selection MSCI Index (formerly Equities US ESG Leaders Index)

28.1.5. Policy followed during the year

The benchmark of the Equities US ESG Index sub-fund is the MSCI Daily Net Total Return USA ESG Leaders Euro index.

The MSCI Daily Net Total Return USA ESG Leaders Euro index, Net Dividends Reinvested, provides exposure to companies with a high ESG performance in the United States and is established by MSCI.

As of the end of the year, the index had 292 positions. The index value can be viewed on MSCI's website, www.msci.com/end-of-day-data-search. The composition of its indices can be viewed on the MSCI's website, www.msci.com/constituents.

The almost full physical replication policy has been followed throughout the year.

During the year, the sub-fund closely followed the movement of the index.

28.1.6. Future policy

The Equities US ESG Leaders Index sub-fund, whose vocation is to be representative of American companies with a high ESG performance, will continue its investment policy based on broad sector diversification with the USA ESG Leaders index published by MSCI as a benchmark.

28.1.7. Summary risk indicator

The summary risk indicator gives an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 5

With the exception of classes (A USD, B USD, M USD, N USD) : 4

28.7. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	101,071,476.59	43,833,185.98	144,904,662.57
Sales	157,840,919.58	65,315,951.57	223,156,871.15
Total 1	258,912,396.17	109,149,137.55	368,061,533.72
Subscriptions	57,342,247.71	86,616,004.94	143,958,252.65
Redemptions	117,541,712.26	111,459,541.88	229,001,254.14
Total 2	174,883,959.97	198,075,546.82	372,959,506.79
Reference average of the total net asset	1,223,721,506.52	1,284,656,507.82	1,254,355,496.24
Rotation Percentage	6.87%	-6.92%	-0.39%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

28.9. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.10 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.04 %

Fee sharing

As at 31 December 2024, 0.24% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

28.11. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

28.11.1. Gross dividends paid in the financial year

2021	class A 1.66 EUR
	class A USD 2.04 USD
	class M 1.67 EUR
	class M USD 2.05 USD
2022	class A 1.8 EUR
	class A USD 1.77 EUR
	class M 1.8 EUR
	class M USD 1.77 EUR

	class A USD 1.50 USD
	class M 1.38 EUR
	class M USD 1.52 USD

28.11.2. Investment restrictions and overruns

Between the NAV Dates of 04/04/2024 and 05/04/2024, a passive breach of the prospectus was opened in the sub fund DPAM B Equities US ESG Leaders Index. The sub fund should only be invested in issues from the MSCI USA ESG LEADERS index. On the NAV date of 04/04/2024, following a split, the fund received SOLVENTUM Corp shares that are not part of the index. The manager sold the shares as soon as they joined the fund.

28.11.3. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

28.11.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> Yes	<input checked="" type="radio"/> <input type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input type="checkbox"/> with a social objective
	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund was passively managed and aimed to physically replicate the MSCI USA ESG Leaders Index in Euro ("the Index").

The Index provides exposure to American large and mid-cap companies with high ESG performance relative to their peers in the same sector ("Best-in-Class" 50%).

By construction of the Replicated Index, the Sub-fund aimed to improve the environmental and social characteristics compared to the starting universe, the parent index, the MSCI USA ("Parent Index").

In addition, the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

During the Reference Period, derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund were not used for the purpose of promoting environmental and/or social characteristics.

● **How did the sustainability indicators perform?**

During the Reference Period, the sustainability indicators used to measure the attainment of all of the environmental and social characteristics promoted by the Sub-fund corresponded to the binding investment restrictions of the Index it aims to replicate (some of the indicators are compared to the Parent Index):

- a. The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- b. The Sub-fund has zero exposure to companies involved in controversial economic activities, based on the exposure limits imposed by the index construction methodology;
- c. Zero exposure to companies involved in severe ESG controversies;

The methodologies used to construct the indices are available on the MSCI.com website: <https://www.msci.com/index-methodology>

("MSCI ESG Leaders Indexes Methodology").

Further information, including methodologies for calculating ESG scores and controversy levels, can be found on the MSCI website: www.msci.com.

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024
E/S characteristics	99.92%	99.88%	99.88%

Reference period	2022	2023	2024
Sustainability indicator a.	No exposure	No exposure	No exposure
Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

In concrete terms, the PAIs were integrated into the different stages of the construction of the Index which the Sub-fund replicates passively:

1) Firstly, with regard to environmental PAIs:

a) the Global Standards compliance filter includes a filter on environmental protection.

b) the filtering of companies involved in economic sectors and activities that are subject to debate as to their ethical and sustainable character (e.g.: nuclear energy production, tobacco, thermal coal, non-conventional oil and gas).

c) the filter on ESG score and level of controversy as defined by MSCI also includes controversies related to environmental issues, such as the environmental impact of company operations (emissions, waste, energy use, biodiversity and water consumption), the environmental impact on the supply chain and the impact of products and services (carbon and environmental impact).

d) the best-in-class classification, which is based on an analysis of the ESG profile based in particular on the environmental PAIs.

2) Secondly, with regard to social PAIs:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. In addition, the filter for companies involved in the selection of key ESG controversies includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

b) the exclusion filter for companies involved in controversial activities (inter alia: exclusion of companies involved in non-conventional armaments).

c) the exclusion filter for companies involved in major ESG controversies on social issues.

d) the best-in-class classification, which is based on an analysis of the ESG profile based in particular on the social PAIs.

The approach and processes are described in more detail in the documents available at www.msci.com.

The methodologies for constructing the indices can be found at <https://www.msci.com/index-methodology> ("MSCI ESG Leaders Indexes Methodology").

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2024

Largest investments	Sector	% Assets	Country
NVIDIA CORP.	Manufacturing	12.24	United States of America
MICROSOFT	Information and communication	11.07	United States of America

Largest investments	Sector	% Assets	Country
TESLA MOTORS INC.	Manufacturing	4.31	United States of America
ALPHABET A	Information and communication	4.12	United States of America

COCA-COLA CO	Manufacturing	0.96	United States of America
MERCK & CO	Manufacturing	0.93	United States of America
ACCENTURE A	Information and communication	0.82	United States of America

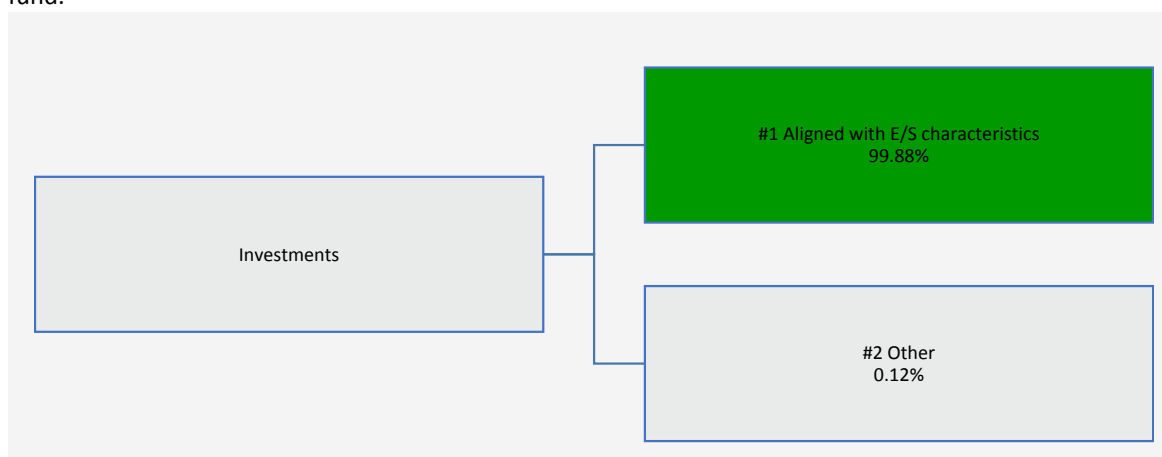

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of investments in specific assets.

What was the asset allocation?

During the Reference Period, the Sub-fund invested 99.88% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S characteristics").

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% Assets
Information and communication	Publishing activities	17.95
Manufacturing	Manufacture of computer, electronic and optical products	16.44
Information and communication	Information service activities	7.96
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	6.71
Manufacturing	Manufacture of motor vehicles, trailers and semi-trailers	4.88

Transportation and storage	Warehousing and support activities for transportation	0.11
Manufacturing	Manufacture of basic metals	0.10
Transportation and storage	Air transport	0.04
Manufacturing	Manufacture of furniture	0.04
Liquid assets	Liquidity	0.12

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**
- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☐ No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What was the share of investments made in transitional and enabling activities?**
- Not applicable

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

- What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

Not applicable

Are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- What was the share of socially sustainable investments?**

Not applicable

- What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

Binding ESG screenings carried out in accordance with the investment strategy described above have been applied to the entire Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 0.12% in liquid assets. There are no minimum environmental or social guarantees on these investments.

- What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

During the Reference Period, the Replicated Index was constructed in particular by applying a combination of securities-based exclusions and a Best-in-Class selection process to companies in the MSCI USA Parent Index:

a) The exclusion process focused on:

- Companies that do not have an MSCI ESG rating of 'BB' or above. Companies must maintain an MSCI ESG rating of 'BB' or above to remain in the index.
- Companies that are not in compliance with Global Standards and prevention of corruption
- Companies involved in economic sectors and activities that are subject to debate as to whether or not they are ethical and sustainable (e.g. alcohol, gambling, nuclear energy production, tobacco etc.).
- Companies involved in severe ESG controversies: securities must have a score (according to the MSCI ESG Research methodology) of at least 3 to be eligible for inclusion.

b) The MSCI Best-in-Class selection process was applied to the remaining eligible securities in the selection universe:

The Index targets sector weights consistent with those of the Parent Index to limit the systematic risk introduced by the ESG selection process. The methodology aims to include the securities of companies with the highest ESG ratings making up 50% of the market capitalisation of the Parent Index.

Additional information on this Index and its composition can be found at www.msci.com. The weight of stocks included in the index will depend on their market capitalisation adjusted for free float.

In addition to the investment restrictions related to Index replication, the Sub-fund adopted the following constraints: On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● How does the reference benchmark differ from a broad market index?

During the Reference Period, the DPAM B Equities US ESG Leaders Index sub-fund consisted of a full physical replication of the MSCI USA ESG Leaders Index (benchmark).

The MSCI ESG Leaders indices target sector weights that mirror the relative sector weights of the underlying MSCI Global Investable Market indices (Parent Indices) in order to limit the systematic risk introduced by the ESG selection process.

The Replicated Index was constructed by applying a process combining exclusions (Global Standards compliance filter, involvement in severe controversies, controversial activities) and a best-in-class selection of companies from the MSCI USA Parent Index. In order to be included and maintained in the MSCI ESG Leaders indices, companies had to have an MSCI ESG rating of 'BB' or above.

The methodologies used to construct the indices are available on the MSCI.com website: <https://www.msci.com/index-methodology> ("MSCI ESG Leaders Indexes Methodology").

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

During the reference period, the Sub-fund's sustainability indicators were therefore aligned and performed in line with those of the benchmark.

● How did this financial product perform compared with the reference benchmark?

	Sub-fund	MSCI USA ESG Leaders Index
Exposure to companies deemed to be non-compliant with the United Nations Global Compact and international standards (percentage weighting)	0	0
Exposure to companies involved in controversial economic activities (percentage weighting)	0	0
Exposure to companies involved in severe ESG controversies (percentage weighting)	0	0

● **How did this financial product perform compared with the broad market index?**

	Sub-fund	Parent Index - MSCI USA
Exposure to companies deemed to be non-compliant with the United Nations Global Compact and international standards (percentage weighting)	0	0
Exposure to companies involved in controversial economic activities (percentage weighting)	0	0.6
Exposure to companies involved in severe ESG controversies (percentage weighting)	0	0

29. INFORMATION ABOUT THE SUBFUND DPAM B BALANCED GROWTH

29.1. MANAGEMENT REPORT

29.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On 24 March 2022, the sub-fund received all the assets of the DPAM HORIZON B Balanced Growth sub-fund of the DPAM HORIZON B SICAV. On 1 April 2022, the sub-fund was launched following the merger.

Subscription price during this period: The initial subscription price corresponds to the net asset value of the shares of the DPAM HORIZON B Balanced Growth sub-fund of the DPAM HORIZON B SICAV on 1 April 2022.

29.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

29.1.3. Aim and main outlines of the investment policy

Objective

The objective of the sub-fund is to offer investors, by means of a balanced managed portfolio, a long-term capital gain by investing in equity securities and/or debt securities of issuers throughout the world. No formal guarantee has been given either to the sub-fund or to its investors.

The sub-fund is actively managed. No benchmark is used in the management of the sub-fund. Quantitative information from a broader market can be used for risk management and evaluation by the manager.

Investment policy

The sub-fund invests mainly, without sector or geographical restriction, but mainly in Europe in (i) shares and/or other securities giving access to capital of companies and (ii) in fixed or floating rate short, medium and long-term bonds and/or debt securities.

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts or deposits, and in the form of undertakings for collective investment.

The sub-fund is a sub-fund within the meaning of Article 6 of the SFDR 2019/2088.

29.1.4. Index and benchmark

No benchmark is used in the management of the sub-fund.

29.1.5. Policy followed during the year

After a mixed start, economic data supported markets. The US economy showed resilience, while Europe recovered due to restocking. Positive earnings results also boosted performance. Investors favored large companies, which, along with quality and growth, drove performance this year. In the US, large-cap tech companies performed strongly, with artificial intelligence themes propelling markets. In Europe, major companies like GSK, Roche, and ASML showed similar trends, while small caps underperformed. Over the summer, Europe experienced a brief catch-up thanks to positive economic surprises and improved PMI figures.

Disinflation continued, and the labor market remained tight, benefiting consumers and the economy. However, there were some signs of weakness in both the US and Europe. Growth concerns in August caused short-lived market turbulence. Investors continued to prefer large caps and secular themes while adopting a more defensive stance. Interest rate cuts and a soft landing helped markets find new direction, leading the fund to increase its equity weight organically.

A soft landing remained the base case, though consensus began shifting towards a no-landing scenario after the US elections. Expectations for growth and inflation adjusted accordingly. Asset allocation remained unchanged ahead of the elections due to uncertainty. We continued to favor the US over Europe due to stronger fundamentals. The future remains challenging for Europe, especially with potential impacts from Trump's new term on competitiveness.

The portfolio is well-balanced across sectors. We fine-tuned it with limited transactions. At the start of the semester, we reshuffled the exposure to Technology and Healthcare while at the same time increasing its weight. Due to persistent underperformance of small caps, we also reduced exposure. During the fourth quarter we added more Kinopolis (improving fundamentals) and bought Infineon, Investor AB, Reply, Nvidia. Adidas on weakness.

29.1.6. Future policy

US Exceptionalism has led the US to dominate nearly 70% of the MSCI World Index, despite only contributing 26% to global GDP. This is due to tech innovation, strong companies (Mag7), a strong USD, and higher productivity.

This dominance might continue because Europe's economy is struggling, and emerging markets face issues like geopolitics and poor governance. The US market has high valuations and concentrated performance, with investors heavily invested and very bullish.

Despite good growth and rate cuts, there's little room for error in 2025. Europe's market is underperforming but has low valuations and could improve with events like a Ukraine/Russia cease-fire or ECB rate cuts.

Europe is seen as a value market, not attracting much interest now. As we believe that the market has already front-loaded positive impacts from Trump's policies and economic growth will slow-down next year we refrain from increasing US stocks further and instead keeping our current European investments intact. It seems too late to change our strategy.

29.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile: 4.

29.8. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	4,093,038.04	2,472,365.03	6,565,403.07
Sales	3,604,834.14	2,207,259.02	5,812,093.16
Total 1	7,697,872.18	4,679,624.05	12,377,496.23
Subscriptions	0.00	38,186.76	38,186.76
Redemptions	0.00	102,704.78	102,704.78
Total 2	0.00	140,891.54	140,891.54
Reference average of the total net asset	35,638,169.82	36,619,278.65	36,131,404.86
Rotation Percentage	21.60%	12.39%	33.87%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

On the date of publication of this report, the net asset value per share is published on the following websites: <https://www.funds.dpaminvestments.com/funds.html> and www.beama.be. This information is also available at the counters of the financial services department.

29.10. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). Information on the past performance of all share classes is published on the <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class B

Annual return:

No benchmark is used in the management of the sub-fund.

29.11. CHARGES

Recurring costs

Class A - BE0171618250:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.39 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.09 %

Class B - BE0171619266:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.39 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.09 %

Fee sharing

As at 31 December 2024, 0.07% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

29.12. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

29.12.1. Gross dividends paid in the financial year

2019 class A 192.97 EUR
2020 class A 189.37 EUR
2021 class A 227.02 EUR
2022 class A 236.99 EUR
2023 class A 402.22 EUR

29.12.2. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

29.12.3. Transparency in sustainability

Mandatory declaration in accordance with Article 7 of Regulation (EU) 2020/852 of 18 June 2020 on the establishment of a framework to promote sustainable investment and amending Regulation (EU) 2019/2088.

The investments underlying this sub-fund do not take into account the European Union's criteria for environmentally sustainable economic activities.

Application of art. 7, 1, b) of Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) - main negative impacts negative impacts

During the period covered by the periodic report, the sub-fund has taken into consideration all the main negative impacts on sustainability factors (hereinafter "PINs") listed in Table 1 of Annex I of the Commission Delegate (EU) 2022/1288 of 6 April 2022, as amended. The SIPs are intrinsically linked to DPAM's commitment to reduce the negative impact of the fund's/sub-fund's investments by avoiding any activities or behaviours that may significantly undermine sustainable and inclusive growth.

This commitment is incorporated into the entire research and investment process from its inception.

The way in which the sub-fund takes these SIPs into account is based on DPAM's commitment to systematically integrate several SIPs into the management of the sub-fund.

1) Certain PINs related to environmental issues are monitored:

a) by assessing controversies relating to these issues and in which issuers are involved (in accordance with DPAM's Controversial Activities Policy) ;

b) by analysing the performance of issuers with regard to, among other things, their greenhouse gas emissions and/or their water consumption (analysis by the Task Force on Climate-Related Financial Disclosure and/or fundamental research).

2) Certain PINs relating to social issues, staffing, respect for human rights and the fight against corruption are also monitored.

a) by an assessment of controversies relating to these issues and in which issuers are involved (in accordance with DPAM's Controversial Activities Policy);

b) by analysing the performance of issuers with regard to, among other things, their compliance with the principles of the UN Global Compact and the OECD Guidelines for Multinational Enterprises, gender diversity within governance bodies and/or the governance bodies and/or the unadjusted gender pay gap (fundamental research).

29.12.4. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Not applicable

30. INFORMATION ABOUT THE SUBFUND DPAM B BALANCED FLEXIBLE

30.1. MANAGEMENT REPORT

30.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On 24 March 2022, the sub-fund received all the assets of the DPAM HORIZON B Balanced Flexible sub-fund of the DPAM HORIZON B SICAV. On 1 April 2022, the sub-fund was launched following the merger.

Subscription price during this period: the initial subscription price corresponds to the net asset value of the shares of the DPAM HORIZON B Balanced Flexible sub-fund of the DPAM HORIZON B SICAV on 1 April 2022.

30.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

30.1.3. Aim and main outlines of the investment policy

Objective

The objective of the sub-fund is to offer investors a long-term capital gain by investing in equity securities, fixed income securities of issuers from all parts of the world or undertakings for collective investment.

This is an actively managed sub-fund.

No benchmark is used in the management of the sub-fund. Quantitative information from a broader market can be used for risk management and evaluation by the manager.

No formal guarantee has been given either to the sub-fund or to its investors.

Investment policy

The sub-fund invests principally in shares and/or other securities giving access to capital (to a maximum amount of 60% of its net assets) and in bonds and/or other fixed-rate or floating-rate debt securities with an investment grade* rating on the scale used by one of the three rating agencies, Standard & Poor's (S&P)/Moody's/Fitch, and offering a periodic or capitalised yield. The sub-fund invests a maximum of 3% of its net assets in bonds and/or other fixed-rate or floating-rate debt securities with an inferior rating to investment grade.

In the event that the aforementioned investment criteria are exceeded passively, an adjustment will be made, taking into consideration the interests of the investors.

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts, deposits, money market instruments and/or short-term instruments with an investment grade rating. Liquid assets are considered to be fixed rate.

The sub-fund may invest up to 10% of its assets in open-ended undertakings for collective investment in EUR in order to indirectly achieve the objectives listed above or to invest its liquidity.

*Investment Grade: is an interpretation of the rating of the bond issuer in terms of the financial risks. Rating agencies use their own scale to assess the notion of risk. Investment grade ratings are situated between AAA and BBB- according to the Standard & Poor's (S&P) and Fitch scale and between Aaa and Baa3 according to the Moody's scale.

For bonds without an external rating, the manager is responsible for determining whether the issuer satisfies the requirements of an investment grade rating.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

30.1.4. Index and benchmark

No benchmark is used in the management of the sub-fund.

30.1.5. Policy followed during the year

After a mixed start, economic data supported markets. The US economy showed resilience, while Europe recovered due to restocking. Positive earnings results also boosted performance. Investors favored large companies, which, along with quality and growth, drove performance this year. In the US, large-cap tech companies performed strongly, with artificial intelligence themes propelling markets. In Europe, major companies like GSK, Roche, and ASML showed similar trends, while small caps underperformed. Over the summer, Europe experienced a brief catch-up thanks to positive economic surprises and improved PMI figures.

Disinflation continued, and the labor market remained tight, benefiting consumers and the economy. However, there were some signs of weakness in both the US and Europe. Growth concerns in August caused short-lived market turbulence. Investors continued to prefer large caps and secular themes while adopting a more defensive stance. Interest rate cuts and a soft landing helped markets find new direction, leading the fund to increase its equity weight organically.

A soft landing remained the base case, though consensus began shifting towards a no-landing scenario after the US elections. Expectations for growth and inflation adjusted accordingly. Asset allocation remained unchanged ahead of the elections due to uncertainty. We continued to favor the US over Europe due to stronger fundamentals. The future remains challenging for Europe, especially with potential impacts from Trump's new term on competitiveness.

The portfolio is well-balanced across sectors. We fine-tuned it with limited transactions, adding more Kinopolis due to improving fundamentals and participating in the CTP placement, which specializes in logistics real estate. To fund these moves, we reduced positions in KBC and Moody's and exited Barco, Spirax Sarco, and Marr due to deteriorating fundamentals.

30.1.6. Future policy

US Exceptionalism has led the US to dominate nearly 70% of the MSCI World Index, despite only contributing 26% to global GDP. This is due to tech innovation, strong companies (Mag7), a strong USD, and higher productivity.

This dominance might continue because Europe's economy is struggling, and emerging markets face issues like geopolitics and poor governance. The US market has high valuations and concentrated performance, with investors heavily invested and very bullish.

Despite good growth and rate cuts, there's little room for error in 2025. Europe's market is underperforming but has low valuations and could improve with events like a Ukraine/Russia cease-fire or ECB rate cuts.

Europe is seen as a value market, not attracting much interest now. As we believe that the market has already front-loaded positive impacts from Trump's policies and economic growth will slow-down next year we refrain from increasing US stocks further and instead keeping our current European investments intact. It seems too late to change our strategy.

30.1.7. Summary risk indicator

The summary risk indicator give an indication of the risk associated with investing in a sub-fund. It places this risk on a scale ranging from one (lowest risk) to seven (highest risk).

Risk and reward profile : 3

30.8. CHANGES IN THE COMPOSITION OF THE ASSETS IN EUR

	1st semester	2nd semester	Total
Purchases	4,229,493.63	3,545,103.78	7,774,597.41
Sales	11,847,215.90	2,714,012.72	14,561,228.62
Total 1	16,076,709.53	6,259,116.50	22,335,826.03
Subscriptions	128,123.80	53,709.92	181,833.72
Redemptions	9,641,100.61	62,529.74	9,703,630.35
Total 2	9,769,224.41	116,239.66	9,885,464.07
Reference average of the total net asset	49,332,535.13	48,461,812.42	48,894,794.75
Rotation Percentage	12.79%	12.68%	25.46%

The rotation rate gives the annual average of the transactions. A figure close to 0% shows that the transactions relating to the securities or the assets with the exception of deposits and liquid assets during a given period, were done exclusively in function of the subscriptions and redemptions. A negative percentage indicates that the subscriptions and redemptions give rise to only few or, as the case may be, no transactions in the portfolio.

A detailed list of the transactions carried out during the financial year can be consulted, free of charge, at Banque Degroof Petercam S.A with its registered office at Rue de l'Industrie 44 - B-1040 Brussels which provides the financial services.

On the date of publication of this report, the net asset value per share is published on the following websites: <https://www.funds.dpaminvestments.com/funds.html> and www.beama.be. This information is also available at the counters of the financial services department.

30.10. PERFORMANCES

Figures reflect past performance and are not an indicator of future performance. These figures do not include any restructuring.

Returns are determined at the end of the financial year.

The annual return is defined as the absolute return earned over a year. For the semi-annual report, the accounting year is 12-month period preceding the end of the half-year.

The performance of accumulation units is calculated in a similar way to distribution units. Only the performance (in the form of bar charts) of class B shares is shown in this report. The performance of other share classes may differ, in particular as a result of charges specific to each class (management fees, currency hedging fees, subscription taxes, etc.). <https://www.funds.dpaminvestments.com/funds.html> website. ("Overview" tab).

Bar chart showing annual returns of the last 10 years (in % and calculated in EUR) as of 31 December 2024:

Class F	8.21 % (in EUR)	-0.05 % (in EUR)	2.57 % (in EUR)	3.97 % (in EUR)	02/04/2013	4.32 % (in EUR)

30.11. CHARGES

Recurring costs

Class B - BE0940785794:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	1.27 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.13 %

Class F - BE6248455063:

Management fees and other administrative and operating expenses	These are the costs of managing the sub-fund's portfolio, including the costs of the subfund's service provider and operations. This estimate is based on actual costs over the past year.	0.32 %
Transaction costs	These are the costs of buying and selling investments held by the sub-fund. They are an estimate of the costs incurred when buying and/or selling the investments underlying the product. The actual amount varies according to the quantity bought and sold.	0.13 %

Fee sharing

As at 31 December 2024, 17.79% of the remuneration due to the Fund Manager was retroceded to some other distributors, third parties and the Banque Degroof Petercam or one of its subsidiaries. The third parties are either end clients with a retrocession agreement, or institutional clients under discretionary management with a management agreement. Bank Degroof Petercam or one of its subsidiaries are distributors in the same way as external distributors.

30.12. NOTES TO THE FINANCIAL STATEMENTS AND OTHER INFORMATION

30.12.1. Valuation of financial instruments

Bonds and other debt securities as well as money market instruments in the portfolio were valued at their average price. The valuations have not been adjusted to approximate bid prices, as the difference between bid and ask prices changed significantly over the period, both over time and depending on the nature of the security.

30.12.2. Transparency in sustainability

Environmental or social characteristics

In accordance with Article 50 of Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, as amended, information related to environmental or social characteristics promoted by this sub-fund is reflected in the periodic disclosures as defined in Regulation (EU) 2019/2088 of 27 November 2019 (SFDR) and attached to this report. This periodic information has not been audited by the auditor.

Statement on the Taxonomy Regulation

Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on establishing a framework for the promotion of sustainable investments and amending Regulation (EU) 2019/2088 (the "Taxonomy Regulation") introduced the concept of "no serious impairment" under which investments in accordance with the Taxonomy Regulation must not seriously impair the objectives of the Taxonomy Regulation and must comply with specific European Union criteria. The "no serious impairment" principle applies only to the underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities. The underlying investments of the remainder of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

30.12.3. Transparency of the securities financing transactions and of reuse

In accordance with Article 13 and Section A of the Annex to Regulation EU 2015/2365, the SICAV must inform investors of its use of securities financing transactions and total return swaps in the annual report and the half-yearly report.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <div style="margin-left: 40px;"> <input type="checkbox"/> with a social objective </div> <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the Reference Period from 01/01/2024 to 31/12/2024 (hereinafter the "Reference Period"), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviours that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.
- excluding countries that do not respect a minimum of democratic requirements.

During the Reference Period, derivative products, if any, used for the purpose of achieving the investment objectives of the sub-fund were not used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

● How did the sustainability indicators perform?

1) For direct investments (in shares or corporate bonds):

- a) The Sub-fund has not been exposed to companies that are considered not to meet Global Standards;

b) the Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (available at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>);

c) The Sub-fund has not been exposed to companies facing extremely serious ESG controversies around environmental or social issues;

2) For direct investments (in sovereign bonds):

d) The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.

● **...and compared to previous periods?**

None of the sustainability indicators has been subject to a guarantee provided by an auditor or a review by a third party.

Reference period	2022	2023	2024

Sustainability indicator b.	No exposure	No exposure	No exposure
Sustainability indicator c.	No exposure	No exposure	No exposure
Sustainability indicator d.	No exposure	No exposure	No exposure

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

For direct investments (in shares or corporate bonds):

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288, for direct investments in shares or corporate bonds.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

a) they have been analysed and monitored at the level of the invested issuers, particularly with respect to PAIs related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD)

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

b) after that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with the Global Standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

c) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible at <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. The exclusion of companies involved in thermal coal production, for example, provides a better guarantee that indicators such as biodiversity and greenhouse gas emissions are taken into account.

d) The filtering and analysis on the basis of the main ESG controversies in which companies may be involved also included controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity and water consumption), the environmental impact on the supply chain and the impact of products and services (carbon and environmental impact).

2) Second, the social PAIs were systematically analysed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labour rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities in accordance with DPAM's Controversial Activities Policy (accessible via the link <https://www.dpaminvestments.com/documents/controversial-activity-policy-enBE>) has been applied. In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) the filtering and analysis on the basis of the main ESG controversies in which companies may be involved also included controversies related to social issues, namely society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of board gender diversity has been addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. The results of the dialogues and votes over the Reference Period are available in the voting report and the engagement report at <https://www.dpaminvestments.com/documents/voting-activity-report-enBE> and <https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>.

For direct investments (in sovereign bonds):

During the reference period, the Sub-fund took into consideration the environmental and social PAIs listed in table 1 of appendix I of the Delegated Regulation (EU) 2022/1288, for direct investments in sovereign bonds.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that DPAM developed for its sovereign bond strategies. It is therefore included in the country's sustainability score and may influence it positively or negatively depending on its level and evolution in relation to other issuing countries. The results of the country sustainability scores were discussed with the countries concerned according to DPAM's Engagement Policy, which is available at <https://www.dpaminvestments.com/documents/engagement-policy-enBE>.

The second PAI relates to social issues and focuses on issues of social breaches. Countries that have not met the minimum democratic requirements have been excluded. The country's sustainability model observes several indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to major labour conventions, the issue of equal opportunity and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other issuing countries.

During the Reference Period, the management teams have engaged in a dialogue on the results of the sustainability scores with certain countries according to DPAM's Engagement Policy (via the link <https://www.dpaminvestments.com/documents/engagement-policy-enBE>).

Over the Reference Period, the management teams conducted a certain number of dialogues with the various participants in sovereign debt issues. These dialogues allowed us to verify with the stakeholders the points of attention of the governmental policies, notably in environmental and/or social matters.

Details of the dialogues with countries and companies will be published in an annual report in the first quarter of 2025 on the DPAM website (<https://www.dpaminvestments.com/documents/engagement-activity-report-enBE>).

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2024

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

● What was the asset allocation?

By applying the investment strategy described above, the Sub-fund invests 99.38% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as "#1 Aligned with E/S characteristics").

Any failure to comply with the asset allocation stipulated in the prospectus at any time during the Reference Period will be mentioned in the specific section of the annual report dedicated to the Sub-fund.

● In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Public administration	Public administration and defence; compulsory social security	31.75
Financial and insurance activities	Financial service activities, except insurance and pension funding	11.75
Manufacturing	Manufacture of computer, electronic and optical products	5.61
Information and communication	Publishing activities	4.62
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.22
Electricity, gas, steam and air conditioning supply	Electricity, gas, steam and air conditioning supply	3.10
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	3.05

Professional, scientific and technical activities	Scientific research and development	0.21
Liquidity	Liquidity	0.62

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☐ No

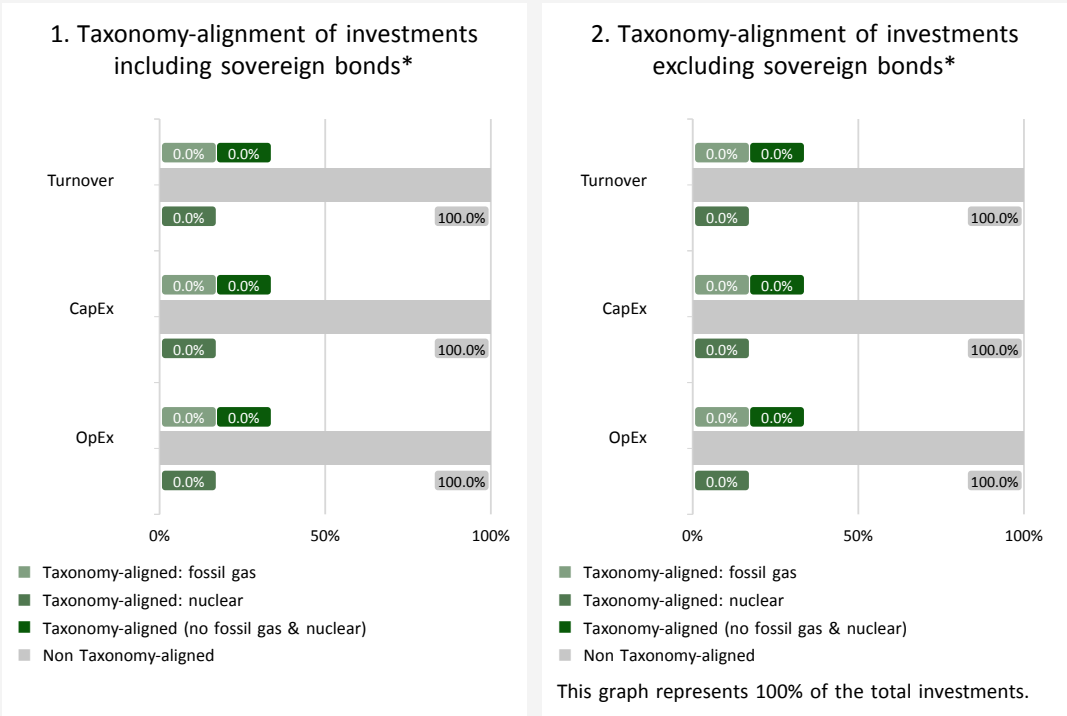

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

Not applicable

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

Are sustainable investments with an environmental objective that **do not take into account the criteria** for

What was the share of socially sustainable investments?

Not applicable

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above have been applied to the entire Sub-fund, excluding the:

- Liquid assets (excluding treasury bills)
- Derivative instruments
- Issuers (including UCI) that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest in or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 0.62% in liquid assets. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

For direct investments (in shares or corporate bonds):

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

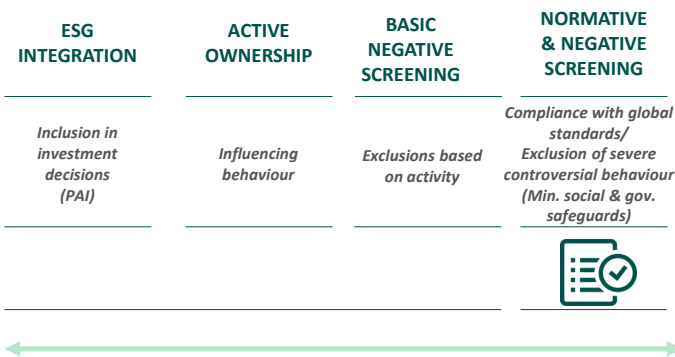

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

For direct investments (in sovereign bonds):

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House ("not free") and The Economist Intelligence Unit ("authoritarian regime"). The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

How did this financial product perform compared with the reference benchmark?

Not applicable

- **How does the reference benchmark differ from a broad market index?**

Not applicable

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable

- **How did this financial product perform compared with the reference benchmark?**

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**31. INFORMATION ABOUT THE SUBFUND DPAM B BONDS
GLOBAL INFLATION LINKED**

31.1. MANAGEMENT REPORT

31.1.1. Launch date of the sub-fund and subscription price of the shares

Initial subscription period: 1 April 2022.

On 24 March 2022, the sub-fund received all the assets of the DPAM HORIZON B Bonds Global Inflation Linked sub-fund of the DPAM HORIZON B SICAV. On 1 April 2022, the sub-fund was launched following the merger.

Subscription price during this period: the initial subscription price corresponds to the Net Asset Value of the shares of the DPAM HORIZON Bonds Global Inflation Linked sub-fund of the DPAM HORIZON B SICAV dated 1 April 2022.

31.1.2. Stock exchange listing

The sub-fund's shares are not listed on the stock market.

31.1.3. Aim and main outlines of the investment policy

Objective

The objective of the sub-fund is to offer investors exposure to debt securities denominated in any currency, whose interest payments and/or capital redemption depend on the movement in inflation in a given country or geographical region.

No formal guarantee has been given either to the sub-fund or to its investors.

This is an actively managed sub-fund, which means that the portfolio manager does not aim to replicate the performance of a benchmark.

Investment policy

The sub-fund invests principally, without any form of sector restriction, a minimum of 75% of its net assets, in fixed or floating rate bonds and/or other debt securities, denominated in any currency and for which the payment of interest and/or redemption of capital depends on the movement in inflation in a given country or a geographical region, which may include, but is not limited to the following list: credit-linked notes* and fiduciary notes** with underlying instruments that have identical characteristics.

The sub-fund may, on an ancillary basis, invest in money market instruments such as for example, certificates of deposit, treasury notes and/or promissory notes, and bonds and/or other debt securities, including fixed or floating rate credit-linked notes and fiduciary notes denominated in any currency and on which the payment of interest and/or the redemption of principal is not dependent on the movement in inflation in a given country or geographical region.

In order to be eligible, those marketable securities forming the principal part and the ancillary part of the portfolio, must be (i) issued or guaranteed by a country, including, where applicable, its regional public authorities or by international or supranational public bodies, or (ii) issued by (governmental, public, semi public or private) institutions held or financed by one or several public players, such as countries, regional public authorities or public international law or supranational bodies and undertakings entrusted with the provision of services of public or general interest, or (iii) benefit from a mechanism guaranteeing a priority redemption in the event of default by the issuer.

The payment flows from bonds and/or other debt or equivalent securities, whose interest payments and/or redemption of principle are determined by inflation, generally have the following configuration:

- Coupon payment = coupon in % * nominal amount * (Index t/Index°)
- Reimbursement = nominal amount * (Index T/Index°) in which:
- Coupon in % = fixed coupon of the bond (which is normally equal to the actual yield on the issue date of the bond)
- Index° = a 3-month inflation index before the issue date of the bond (base index)
- Index T = a 3-month inflation index before the payment date
- Index T = a 3-month inflation index before the due date

The sub-fund may hold liquid assets on a secondary or temporary basis in the form of current accounts or deposits, and in the form of undertakings for collective investment.

The sub-fund may invest a maximum of 10% of its assets in open-ended undertakings for collective investment in order to indirectly achieve the above-mentioned target or place its liquidity.

* Credit-Linked Note: financial instrument issued by a financial institution in the form of a debt security on which the payment is connected to another bond or loan.

** Fiduciary Note: differs from a credit linked note in that the buyer does not bear risk of the financial institution which issues it.

The sub-fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR Regulation 2019/2088.

31.1.4. Index and benchmark

The sub-fund uses the following index as a benchmark: Bloomberg Barclays Universal Inflation Linked GDP Weighted IG.

This index is representative of the global inflation-linked bond market. It is a custom index for DPAM calculated by Bloomberg Index Services Limited. The index includes inflation-linked bonds issued by countries with an investment grade rating. Countries are weighted according to their GDP (gross domestic product). Performance is calculated by reinvesting the coupons paid by the debt securities making up the index.

Bloomberg Index Services Limited is listed in the register held by ESMA (European Securities and Markets Authority).

The benchmark is used to compare performance. The selection and weighting of assets in the sub-fund's portfolio may differ significantly from the composition of the benchmark.
